### Aims

The fund aims to produce growth over the medium to long term (5 to 10 years or more) using a cautious approach to investing while smoothing some of the ups and downs of short-term investment performance. The fund spreads investment risk by investing in a range of different asset types, which currently includes European and international equities, property, fixed interest securities, index-linked securities, cash and other specialist investments. The cautious approach to investment means the fund aims to invest 50-75% in fixed interest securities, index-linked securities and cash, although we may occasionally move outside this range to meet the fund objectives.

### Important Information

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- We can't predict the future. Past Performance isn't a guide to future performance. For the range of PruFund funds, what you receive will depend on the value of the underlying investments, the smoothing process, our charges, and when you take your money out.
- The capital guarantee, if applicable, is applied at the end of the guarantee term specified in your personal illustration document. The guarantees we provide are backed by the PAC With-Profits Fund. We do not use a third party to back our guarantees. Guarantees are currently closed to new investments.
- Source of portfolio data: Broadridge. Source of performance data: FE fundinfo. We can't predict the future. Past performance isn't a guide to future performance. The figures shown are intended only to demonstrate performance history of the fund, after allowing for the impact of fund charges and further costs, but take no account of product charges, or any Annual Management Charge paid for by the deduction of units. Charges and further costs may vary in the future and may be higher than they are now. For PruFund, as further costs are factored into the setting of Expected Growth Rates, they are not shown separately here. Fund performance is based upon the movement of the daily price and is shown as total return in the fund's currency of denomination with gross income reinvested. The value of your client's investment can go down as well as up and the amount your client gets back may be less than they put in.

## Commentary

31 March 2026 The quarter began with steady gains but the backdrop shifted quickly as the conflict in the Middle East sent energy prices sharply higher and clouded the macroeconomic outlook. The price of Brent crude rose 94%, its biggest quarterly gain since the start of the Gulf War in 1990. The S&P 500 fell 4.3% and the FTSE World Europe ex UK Index slipped 2.0%. In contrast, the FTSE 100 gained 3.4% owing to its large share of energy and commodity producers. Japan also outperformed the global market after Prime Minister Takaichi secured a large majority in February's election. Emerging markets were resilient too. Asia, which has many energy-importing nations, faced a tougher backdrop. Stocks in China were particularly weak.

Bond markets adjusted sharply as the rise in oil prices fed into higher inflation expectations and reduced the likelihood of near term policy easing. UK government bonds were among the weakest performers, with yields moving sharply higher by the end of March. US Treasury yields rose too, with the 10 year bond ending the period 15 basis points higher. German government bonds followed the same pattern. Corporate bond markets also delivered negative returns.

Commodities produced a varied picture. While oil prices surged, precious metals lost some early momentum. Gold fell sharply in March, but earlier gains meant it was up over the period. Currency markets reflected the shift in sentiment, with the US dollar strengthening against major currencies for a third consecutive quarter as investors scaled back expectations of policy easing.
