

Aims

Objective: The investment strategy of the fund is to purchase units in the M&G PP Overseas Equity passive Fund - the underlying fund.

Underlying Fund Objective: The fund invests, via other M&G PP funds, in the shares of overseas companies against a benchmark mix, with fixed proportions. It is a "fund of funds" and both the proportions invested in each region and investments in each region are passively managed except for emerging markets which are actively managed. The split between the overseas regions may be reviewed from time to time.

Performance Objective: To match the performance of the benchmark as closely as possible.

Prudential Risk Rating

Medium to Higher Risk

These funds offer a diverse geographical spread of equity investment or have multi-asset strategies with a specialist focus (e.g. ethical). The equity funds within this category will have greater overseas exposure and underlying volatility than the "medium" sector.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

You should also consider discussing your decision and the appropriateness of a fund's risk rating with an adviser.

Fund Managers

Name: M&G Treasury & Investment Office
Manager of the underlying fund for 2 years

Important Information

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).

Performance comment

Performance as at Q2 2020 - The FTSE World Index rose 19.9% over the second quarter as stockmarkets experienced a remarkable rebound following the steep declines seen during the onset of the coronavirus pandemic. An extraordinary level of central bank stimulus and government support in the world's major economies came to the aid of many consumers and businesses and was welcomed by investors. The months of April and May saw particularly strong stockmarket returns as the virus appeared to peak in most developed countries and the number of cases started declining, prompting the gradual re-opening of economies.

US equities were the best performers on a regional basis, including its technology-laden Nasdaq index, reflecting a shift towards technology and communication products and services during the pandemic. US share prices enjoyed their most positive quarter for decades, although most remain below their levels in January. Furthermore, indications that the easing of lockdown restrictions was leading to a resurgence in infections, together with a downbeat assessment of the economic outlook from the Fed chairman, caused some weakness later in the period.

European stockmarkets also rallied in the second quarter as optimism that the coronavirus pandemic was under control in Europe helped share prices rebound from steep falls in March. Unprecedented stimulus measures and the gradual easing of coronavirus-related restrictions raised hopes of a swift economic recovery, although investors remained wary about the risks of further outbreaks. Germany was the best-performing market, while at the sector level, industrials, information technology and materials outperformed. In contrast, defensive areas such as consumer staples and healthcare lagged. Energy stocks were the weakest, despite higher oil prices, while financials also underperformed.

Relative calm also returned to Asian and Japanese stockmarkets following the chaos experienced in March. Emerging market equities too rebounded strongly in the second quarter. The best-performing markets included Brazil, Russia, South Africa and Australia, which benefited from the uptick in commodity prices. In contrast, Egypt, Mexico and Peru were among the laggards. China's stockmarket also trailed after resilient performance in the first quarter. Meanwhile, China's passing of a new security law for Hong Kong caused the Hong Kong stockmarket to underperform the rest of the region.
