Prudential Risk Rating

Medium Risk

These funds may invest in multi-asset strategies with a higher weighting in equities (or with significant derivative use), while funds investing mainly in property, high yield or government bonds (such as UK Gilts) are also in this category.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

You should also consider discussing your decision and the appropriateness of a fund's risk rating with an adviser.

Important Information

- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).

Performance comment

Performance as at Q2 2020 - Investor sentiment recovered strongly in the second quarter of 2020 as a slowing in new COVID-19 cases and signs of a pick-up in economic activity raised hopes that the worst of the crisis may be over. Markets were also buoyed by the unprecedented stimulus measures announced by governments and central banks around the world. Against this backdrop, UK corporate bonds delivered solid returns as credit spreads tightened over the quarter. UK government bonds (gilts) also generated positive performance, with the expectation of increased central bank activity more than offsetting concerns over the huge increases in government borrowing. This helped drive gilt yields back towards their lows during the height of the pandemic crisis, with 10-year gilt yields ending the quarter at 0.2% compared to 0.4% at the end of March.
