# Rathbone Ethical Bond Fund

## Investment objective

We aim to deliver a greater total return than the Investment Association (IA) Sterling Corporate Bond sector, after fees, over any rolling five-year period. Total return means the return we receive from the value of our investments increasing (capital growth) plus the income we receive from our investments (interest payments). We use the IA Sterling Corporate Bond sector as a target for our fund's return because we aim to achieve a better return than the average of funds that are similar to ours.

#### Investment strategy

When picking our investments, there are three assessments we make. First, we look at the economic environment to determine which industries we want to own and the duration of our investments. Then we use the Four Cs Plus approach to evaluate creditworthiness. We assess

Character: Whether a company's managers have integrity and competence

Capacity: Ensuring a company isn't over-borrowing and has the cash to pay its debts

Collateral: Are there assets backing the loan, which reduces the risk of a loan

**Covenants:** These loan agreements set out the terms of the bond and restrictions on the company

Conviction: The Plus: We think differently to the market; sometimes contrarian, sometimes sceptical of orthodox thinking, but always opinionated

Meanwhile, Rathbone Greenbank, an ethical research division of our company, assesses potential investments against positive and negative social and environmental criteria. Finally, we compare prices to determine the best value bonds to include in our fund.

# You should know

#### Important information

Copies of the Prospectus, the Key Investor Information Document (KIID), the Supplementary Information Document (SID), and application forms may be obtained, free of charge, from Rathbone Unit Trust Management Limited.

Changes in rates of exchange between currencies may cause the value of investments to decrease or increase.

Details of tax levels and reliefs may change in the future. The value of any tax relief depends on individual circumstances. If you have any doubts about your tax position, or the suitability of this investment, you should seek professional advice

Interest rate fluctuations are likely to affect the capital value of investments within bond funds When long term interest rates rise the capital value of units is likely to fall and vice versa. The effect will be more apparent on funds that invest significantly in long-dated securities. The value of capital and income will fluctuate as interest rates and credit ratings of the issuing companies change

To meet the investment objective, the fund may also invest, at the Manager's discretion, in other transferable securities, money market instruments, warrants, cash and near cash, deposits and units in collective investment schemes. Use may be made of stocklending, borrowing, cash holdings, hedging and other investment techniques permitted by the FCA rules.

As the Manager's annual fee is taken out from capital, distributable income will be increased at the expense of capital which will either be eroded or future growth constrained. All other income expenses are paid out of the fund's income

#### Information notes

^From April 2018, the ongoing charges figure has been calculated according to PRIIPs regulations, which came into effect on 1 January 2018. Holdings are based on six monthly audited accounts. Changes to fund holdings within this period may result in higher or lower ongoing charges.

\*The historic distribution yield reflects the income net of the expenses in the lated in accordance with the relevant standards) as a percentage of the unit price of the fund as at the date based on a snapshot of the portfolio It does not include any initial charge ors may be subject to tax on their
