Manager's commentary

(as at 31/03/15)

The MSCI World Index fell 0.4% in local currency terms in March, primarily due to the US and the UK, while all other regions delivered positive returns. Fixed income fared worse than equity, with the Barclays Global Aggregate down 1.0%. In equity, Europe was the best-performing region, while Japan also had a strong month as speculation continued over the prospect of the Bank of Japan adding to its quantitative easing programmes. In contrast, US economic data continued to disappoint.

The trust's net asset value and share price outperformed the benchmark. The investment trust sector outperformed the wider UK market, with the FTSE Equity Investment Instruments Index returning 1.2% vs. -1.7% for the FTSE All Share. The average discount for the sector widened to 7.0% vs. 6.7% at the end of February. Looking across our underlying strategies, most generated positive returns, with the largest positive contributors being JPM UK Dynamic, Biotech Growth Trust and JPM European Investment Trust. Holdings that detracted the most from performance were JPM Claverhouse Investment Trust and JPM American Investment Trust.

Market Outlook

We expect growth in developed economies to strengthen in 2015, with the US economy remaining the growth leader. While Europe and Japan should both narrow the growth gap with the US, this expectation remains reliant on aggressive monetary stimulus. In contrast, US interest rates look set to rise later in 2015, leading to increasing policy divergence across developed economies. Meanwhile, growth in many emerging market economies is likely to remain challenged.

JPMorgan Elect Managed Growth

Investment trust history and investment policies

The Company was incorporated on 16th September 1999 and launched as an investment trust on 24th November 1999 with assets of £28million. The Company changed its name to JPMorgan Fleming Managed Growth plc on 5th December 2002. The Company's name was changed to JPMorgan Fleming Elect plc on 14th January 2004 following the capital reorganisation and combination of JPMorgan Fleming Managed Growth plc and JPMorgan Fleming Managed Income plc. The Company adopted its present name on 2nd February 2006.

In order to achieve its stated investment policy and manage investment risks, the Managed Growth portfolio is invested in a diversified range of investment trusts and open-ended funds, which themselves invest in the UK and overseas. The number of investments in the portfolio will normally range between 30 and 50

Explanatory Notes, Risks and Important Information

Notes

^ACapital only NAV with debt at par, diluted for treasury and/or subscription shares if applicable.

^BDividend yields are based on mid market prices and the estimated dividend(s) payable in respect of the current financial year. This will include declared and prospective dividends. Source Morningstar

^CActual gearing: Represents the excess amount above shareholders' funds of total assets less cash/cash equivalents, expressed as a percentage of shareholders funds. If the amount calculated is negative, this represents a net cash position.

^DOngoing charges are the management fee and all other operating expenses, excluding interest charges on any borrowing and any performance fee payable expressed as a percentage of the average daily net assets during the year. All figures are for the previous financial year.

^EPrior to 15/01/04 the performance record is of the predecessor company J.P. Morgan Fleming Managed Growth plc.

See Glossary of terms for explanations.

Risk Information

The value of investments and the income from them may fall as well as rise and investors may not get back the full amount invested.

The underlying funds may be affected by exchange rate changes which may cause the value of underlying overseas investments to go down as well as up.

The underlying funds may invest in emerging markets which involve a higher element of risk due to political and economic instability and underdeveloped markets and systems.

The underlying funds may invest in smaller company shares, which can be more unpredictable and less liquid than shares of larger companies.

The underlying funds may invest in non investment grade bonds, which could increase capital risk and have an adverse effect on the performance of funds that invest in them.

Where permitted, a trust may invest in other investment trusts that utilise gearing (borrowing), which will exaggerate market movements both up and down.

Derivatives are complex and trusts that use them for investment purposes may be more volatile. These trusts are considered to be higher risk than trusts that invest only in shares.

Glossary of terms

Annual volatility: Volatility is one measure used to assess the risk of a portfolio as it helps to describe the likely range of returns achieved by the fund. In statistical terms it is the standard deviation of the return distribution. Greater volatility of monthly Net Asset Value returns means that there is a wider range of likely returns in the future, or greater uncertainty regarding the fund return. Most investors would equate this greater uncertainty with greater risk. Gearing will have an impact on the volatility of an investment trust.

Benchmark comparison: Comparison of the Company's performance is made with the benchmark. The benchmark is a recognised index of stocks which should not be taken as wholly representative of the Company's investment universe. The Company's investment strategy does not follow or track this index and therefore there may be a degree of divergence between its performance and that of the Company.

Cash: Net current assets and includes investment in liquidity funds & treasury stocks (if held) and drawn revolving credit facilities (if any) with an original maturity of less than 1 year.

Correlation: Correlation describes the way in which Net Asset Value has moved relative to the benchmark. Correlation coefficients range between +1.0 for assets which consistently move in the same direction, and -1.0 for assets which consistently move in the opposite direction. Assets with a correlation of zero are unrelated. Portfolios combining assets with low correlations provide diversification or risk reduction benefits, potentially without decreasing total portfolio return.

Actual gearing: Total portfolio less liquidity stocks, divided by net assets plus income cash and any effects of performance fees and revenue reserve accruals where applicable.

Gearing range: Indication of the maximum and minimum percentage by which the Company may be geared.

Information ratio: This is the difference between the annualised average fund return and the annualised average benchmark return (calculated geometrically) divided by the annualised tracking error. The higher the ratio, the better, as it shows that the risk taken by the fund manager relative to the benchmark has been rewarded. Gearing will have an impact on the information ratio.

Sector/Geographical breakdowns: These are expressed as a percentage of total portfolio and cash. Investments in liquidity funds will be shown as cash.

Top 10 holdings: These are expressed as a percentage of total portfolio and cash. Investments in liquidity funds / treasury stocks will not be shown in the top 10 holdings.

Ongoing charges: The ongoing charges represent the Company's management fee and all other operating expenses, excluding finance costs and any performance fee payable, expressed as a percentage of the average daily net assets during the year.

Tracking error: Tracking error measures the standard deviation of relative returns, i.e. the Net Asset Value return less the benchmark return. Tracking error is often used as a measure of risk taken against the fund's benchmark with a larger tracking error indicating that greater risks were taken relative to the benchmark in achieving the return of the fund. Gearing will increase a tracking error.
