Morningstar Category™ Greater China Equity

Management Commentary

The trust's net asset value and share price fell sharply in July and underperformed the benchmark. Country allocation hurt returns, driven by gearing and overweight exposure to China and underweights in Hong Kong and Taiwan. A few of our A-share positions, such as Hangzhou Hikvision and Spring Airlines, detracted as they fell in line with onshore market corrections. We added to these position on weakness. Our stock selection in Taiwan technology was a major detractor, attributable to our overweights in names such as Advanced Semiconductor, Largan and Nanya Technologies, which sold off on weak trends across the board. Additionally, our underweights in Sands China and Galaxy Entertainment detracted, as Macau gaming names rose broadly on improved sentiment around policy changes. Stock selection in China worked well, helped by underweights in Bank of China and ICBC and a rally in structural growth energy/environmental stocks, such as China Resources Gas and China Longyuan Power.

KEY RISKS

The value of investments and the income from them may fall as well as rise and investors may not get back the full amount invested. Please read the Risk Information, Explanatory Notes, Glossary of Terms and Important Information on the next page.

JPMorgan Chinese Investment Trust plc

SECTOR BREAKDOWN AS AT 31 JULY 2015 ⁶

The Trust is an actively managed portfolio, holdings, sector weights, allocations and leverage, as applicable are subject to change at the discretion of the Investment Manager without notice.

RISK INFORMATION

- The investment objective of a trust may allow some flexibility in terms in portfolio composition.
- Exchange rate changes may cause the value of underlying overseas investments to go down as well as up.
- Investments in emerging markets may involve a higher element of risk due to political and economic instability and underdeveloped markets and systems.
- Investments in smaller companies may involve a higher degree of risk as these are usually more sensitive to price movements.
- Shares in smaller companies and emerging markets are generally traded less frequently than those in larger companies and established markets. This means that there may be difficulty in both buying and selling shares and individual share prices may be subject to short-term price fluctuations.
- External factors may cause an entire asset class to decline in value. Prices and values of all shares or all bonds could decline at the same time.
- The Company may borrow to finance further investment (gearing). The use of gearing is likely to lead to volatility in the Net Asset Value (NAV) meaning that a relatively small movement, down or up, in the value of the Company's assets will result in a magnified movement, in the same direction, of that NAV.

EXPLANATORY NOTES

⁴The Morningstar Rating is an assessment of a fund's past performance - based on both return and risk- which shows how similar investments compare with their competitors. A high rating alone is insufficient basis for an investment decision. © 2015 Morningstar. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

⁵Cum Income only NAV with debt at par, diluted for treasury and/or subscription shares if applicable

⁵Source: Morningstar. Prospective dividend yield is indicative and based on mid market prices, and include the declared and net prospective dividends for the current financial year.

⁶Actual gearing: Represents the excess amount above shareholders' funds of total assets less cash/cash equivalents, expressed as a percentage of shareholders funds. If the amount calculated is negative, this represents a net cash position.

⁶Ongoing charges are the management fee and all other operating expenses, excluding interest charges on any borrowing and any performance fee payable expressed as a percentage of the average daily net assets during the year. All figures are for the previous financial year.

⁷A fee, potentially payable to the investment manager in addition to annual management charges, should the trust meet certain performance criteria. The performance fee is calculated at the rate of 15% of the difference between the net asset value total return and the total return of the MSCI Golden Dragon Index in sterling terms. The maximum total fee payable in any one year in respect of the fixed management fee and any performance fee is capped at 2.0% of the average total assets less current liabilities of the company. Please refer to the annual report for further information on how the performance fee is calculated.

⁸Non-Benchmark holdings (where held) are classified in the appropriate sector/region. Cash is net current assets and holdings used as cash substitutes if applicable.

IMPORTANT INFORMATION

This factsheet is to provide you summary information about the Company and should not be taken as an advice or recommendation to buy or sell its shares. If you are not sure of suitability of our products for your investment needs, please contact a financial adviser. Please ensure reading important product documentation including Key Features and Terms and Conditions, Investment Trust Profiles and Annual Reports and Accounts.

GLOSSARY OF TERMS

BENCHMARK COMPARISON - Comparison of the Company's performance is made with the benchmark. The benchmark is a recognised index of stocks which should not be taken as wholly representative of the Company's investment universe. The Company's investment strategy does not follow or track this index and therefore there may be a degree of divergence between its performance and that of the Company.

CASH - Net current assets including investment in liquidity funds & treasury stocks (if held) and drawn revolving credit facilities (if any) with an original maturity of less than 1 year.

DISCOUNT / PREMIUM - If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. If the share price of an investment company is higher than the net asset value (NAV) per share, the company is said to be trading at a premium. The discount/premium is shown as a percentage of the NAV.

GEARING - Gearing represents the excess amount above shareholders' funds of total assets expressed as a percentage of the shareholders' funds. Total assets include total investments and net current assets/liabilities less cash/cash equivalents and excluding bank loans of less than one year. If the amount calculated is negative this is known as a 'net cash' position.

SECTOR / GEOGRAPHICAL BREAKDOWNS - These are expressed as a percentage of total portfolio and cash. Investments in liquidity funds will be shown as cash.

TOP 10 HOLDINGS - These are expressed as a percentage of total portfolio and cash. Investments in liquidity funds / treasury stocks will not be shown in the top 10 holdings.
