Sources: BlackRock, Euromoney Global Mining Index and Datastream

#### Annual Performance to the Last Quarter End

	31/03/14	31/03/13	31/03/12	31/03/11	31/03/10
	31/03/15	31/03/14	31/03/13	31/03/12	31/03/11
NAV Performance	-26.6%	-18.1%	-16.9%	-16.4%	26.7%
Share Price Performance	-32.6%	-7.8%	-19.1%	-13.1%	28.1%

Performance statistics sources: BlackRock and Datastream. Performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date.

- Past performance is not a guide to future performance and should not be the sole factor of consideration when selecting a product.
- The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at: [blackrock.co.uk/brwm](http://blackrock.co.uk/brwm).

The performance of the Company's portfolio, or Net Asset Value ('NAV') performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

### NAV ('Net Asset Value')

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'. The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

### Company Objective

To provide a diversified investment in mining and metal assets worldwide, actively managed with the objective of maximising total returns. While the policy is to invest principally in quoted securities, the Company's investment policy includes investing in royalties derived from the production of metals and minerals, as well as physical metals. Up to 10% of gross assets may be held in physical metals and up to 20% may be invested in unquoted investments

### Key Risk Factors

All financial investments involve an element of risk. Therefore, the value of your investment and the income from it will vary and your initial investment amount cannot be guaranteed.

The Company can invest in economies and markets which may be less developed and this carries a greater risk of volatility and more uncertainty around how these markets operate, compared to more established economies.

BlackRock World Mining Trust plc invests in mining shares which typically experience above average volatility when compared to other investments. Trends which occur within the general equity market may not be mirrored within mining securities.

Overseas investments will be affected by currency exchange rate fluctuations.

The Company may from time to time utilise gearing (see overleaf).

### NMPI Status

The Company currently conducts its affairs so that its securities can be recommended by IFAs to ordinary retail investors in accordance with the FCA's rules in relation to non-mainstream investment products and intends to continue to do so for the foreseeable future. The securities are excluded from the FCA's restrictions which apply to non-mainstream investment products because they are shares in an investment trust.

## Comments from the Fund Managers

### Performance

- The mining sector rebounded strongly in April as commodity prices rallied on the back of US dollar weakness and positive sentiment out of China as a number of easing measures were announced. These measures include a cut to the reserve requirement ratio as well as reduced restrictions for second time homebuyers, which should improve liquidity conditions and be supportive for the Chinese market.
- Base metals performed particularly well during the month, with zinc and nickel rising 14.2% and 12.8%, whilst aluminium and copper increased by 8.5% and 5.0% respectively in US dollar terms. Iron ore, which has remained under pressure during 2015, finished the month 10% higher as it benefited from announcements of mine closures. Further support came from the announcement that BHP Billiton would defer the expansion of their shipping facility in Western Australia limiting additional supply growth to the market.
- The Company's overweight to copper producers such as Lundin Mining and Cerro Verde, coupled with an underweight to BHP Billiton as the market favoured more leveraged names, aided relative performance during the month. The recent upward move in the iron ore price detracted from performance, principally via our underweight to Vale the major Brazilian iron ore producer. For the month of April, the NAV delivered a total return of 7.2%, taking the return for the Company year-to-date back into positive territory.
- Within the Company's unquoted investments, Avanco Resources a copper development company where the Company secured a US\$12m royalty in July 2014, announced an equity raise to fully finance their Antas (Stage 1) copper mine into production. This places Avanco in an advantageous position of being fully financed, debt free and unhedged as it enters construction. The royalty transaction is expected to settle in Q2 2015, with Avanco targeting first production late 2015 / early 2016. In addition, Banro, where the Company has exposure via a gold-linked preference share and senior secured notes, announced that it had closed the US\$70m balance of its previously announced financing package.

### Strategy/Outlook

- In 2014, good company strategy was outweighed by weakening commodity demand and falling commodity prices and the sector ultimately trended lower. Looking ahead, the outlook for commodity prices remains subdued, given expectations of further US dollar strength and a modest demand outlook. This pressure will continue to force tough decisions and mining companies are likely to remain in austerity mode. Recent commodity price falls suggest further cuts to analyst earnings will be required. As the year progresses, we would expect an acceleration of closures of high-cost capacity in oversupplied markets. This bodes well for the longer term and limits the industry's ability to respond to the next upturn in demand which will ultimately see prices go higher.
- While the sector continues to face headwinds, it is important to remember that we are another year further into the underinvestment phase and closer to the deficit markets that we foresee. We expect an inflection point to be reached once price (and consequently return) expectations start to recover as a result of the supply curtailment, which should accelerate with the current commodity price weakness.

All data in USD terms unless otherwise stated.

### Fund Information (as at 30.04.2015)

Net Asset Value (including income)*	358.75p XD
Net Asset Value (capital only)	351.92p XD
*includes net revenue of	6.83p
Share Price	316.00p XD
Net Gearing	9.6%
Net Yield**	6.7%
Discount to NAV including income	11.9%
Total Assets	£710.6m
Issued capital – Ordinary Shares^	177,287,242
^ excludes shares in treasury	15,724,600

\*\* Based on final dividend of 14.00p per share and interim dividend of 7.00p per share for the year ended 31 December 2014.

The Company's ongoing charges, calculated as a percentage of average net assets (for the year ended 31 December 2014) and using expenses, excluding finance costs were:

1.4%

### Gearing

- Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favourable situation or a particularly attractive stock without having to sell existing investments.
- Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

### Ten Largest Investments (as at 30.04.2015)

Company	% of Total Assets
