Performance statistics sources: BlackRock and Standard & Poor's Micropal. Performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date.

- Past performance is not a guide to future performance and should not be the sole factor of consideration when selecting a product.
- The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at: www.blackrock.co.uk/brwm.

The performance of the Company's portfolio, or Net Asset Value ("NAV") performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

NAV ("Net Asset Value")

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'. The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

Company Objective

To provide a diversified investment in mining and metal assets worldwide, actively managed with the objective of maximising total returns. While the policy is to invest principally in quoted securities, the Company's investment policy includes investing in royalties derived from the production of metals and minerals, as well as physical metals. Up to 10% of gross assets may be held in physical metals and up to 20% may be invested in unquoted royalties, equities or bonds.

Key Risk Factors

All financial investments involve an element of risk. Therefore, the value of your investment and the income from it will vary and your initial investment amount cannot be guaranteed.

The Company can invest in economies and markets which may be less developed and this carries a greater risk of volatility and more uncertainty around how these markets operate, compared to more established economies.

BlackRock World Mining Trust plc invests in mining shares which typically experience above average volatility when compared to other investments. Trends which occur within the general equity market may not be mirrored within mining securities.

Overseas investments will be affected by currency exchange rate fluctuations.

The Company may from time to time utilise gearing. Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

NMPI Status

The Company currently conducts its affairs so that its securities can be recommended by IFAs to ordinary retail investors in accordance with the FCA's rules in relation to non-mainstream investment products and intends to continue to do so for the foreseeable future. The securities are excluded from the FCA's restrictions which apply to non-mainstream investment products because they are shares in an investment trust.

Comments from the Fund Managers

Performance

- June was a relatively solid month for the base metals with copper, aluminium and zinc rising +2%, +3% and +8% respectively. Nickel and tin were the only laggards, seeing declines of -1% and -3% respectively. Nickel's small decline can be attributed to a "pause-for-breath" in investor sentiment following its +37% price increase since the beginning of the year. It is possible we will see this tentative approach continue as uncertainty builds around the outcome of the upcoming Indonesian election (July 9th) and thus the longevity of the current export ban. (All prices: Thomson Reuters Datastream as at 30th June 2014)
- The market continued to focus on the weakening iron ore price in June; however, we saw some recovery during the final days of the month as inventories held at steel mills hit 2 year lows. This was also helped somewhat by an increase in Chinese infrastructure spend, one of the government's 'mini-stimulus' initiatives. Iron ore finished the month at \$94.90/t (62% Fe), representing a +3.4% rise over the month. (Source: CLSA as at 30th June 2014)
- In other news, the mine strike in South Africa, which began on 23rd January and involved 70,000 workers, ended during the final week of the month. Joseph Mathunjwa, President of the Association of Mineworkers and Construction Union (AMCU), said that the union had accepted a three year no-strike wage agreement through to 2016. It is thought that the legacy of the strike will be felt for many months and the industry will be watching to see if there are any issues in the ramp-up to full production. Following the announcement, both palladium and platinum prices suffered from some selling.

Strategy/Outlook

- The mining sector has significantly lagged the general equity market in recent years. However, a number of the downside risks for this sector have reduced (albeit not disappeared). The industry has made good progress in refocusing its strategy: operating costs have been aggressively targeted and investment in projects reassessed. Many commodities are trading close to or below their marginal cost of production, implying that price downside should be limited, in the absence of a collapse in demand. We see 2014 as a year of transition, some of which has begun to materialise with the large cap diversified miners exceeding analyst earnings expectations in Q1.
- The market has been focused on liquidity concerns and increasing volatility in China; however, it is important to highlight the supportive backdrop of synchronous global growth, which in the past has bolstered commodity prices. Mining companies are trading on an undemanding valuation and an attractive dividend yield. With capital expenditure rolling off, management are guiding investors towards rising free cash flows.

All data in USD terms unless otherwise stated.

Total Assets	£993.3m
Issued capital – Ordinary Shares^	177,287,242
^ excludes shares in treasury	15,724,600
*** Based on interim dividend of 7.00p and final dividend of 14.00p per share in respect of the year ended 31 December 2013.	
The Company's ongoing charges, calculated as a percentage of average net assets (for the year ended 31 December 2013) and using expenses, excluding finance costs were:	1.4%

Gearing

- Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favourable situation or a particularly attractive stock without having to sell existing investments.
- Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

Ten Largest Investments (as at 30.06.2014)
