## Fund facts at 30 April 2015

### Company objective

The Company's objective is to achieve capital growth, aiming for a net asset value total return greater than the benchmark which is the Euromoney Smaller European Companies Index expressed in Sterling, by investing predominantly in smaller and medium sized companies in Europe (excluding the UK). The latest Annual Report and Key Investor Information Document set out the investment objective and policy in full and you should read them before investing.

## Glossary

**NAV (Cum Income)** The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

**NAV (Ex Income)** The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

**Share price** Closing mid-market share price at month end.

**Discount/premium** The amount by which the price per share of an investment trust is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

**Total assets** Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

**Net assets** Total assets minus any liabilities such as bank loans or creditors.

**Market capitalisation** Month end closing mid-market share price multiplied by the number of shares outstanding at month end.

**Share price total return** The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

**Net asset value total return** The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

**Yield** Calculated by dividing the current financial year's dividends per share (this will include prospective dividends)

by the current price per share, then multiplying by 100 to arrive at a percentage figure.

**Ongoing charges** The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

**Gearing** The effect of borrowing money for investment purposes (financial gearing). The amount a company can "gear" is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

**Leverage** The Trust's leverage is the sum of financial gearing and synthetic gearing. Details of the Trust's leverage limits can be found in both the Key Investor Information Document and Annual Report. Where a trust utilises leverage, the profits and losses incurred by the trust can be greater than those of a trust that does not use leverage.

**Risk rating** The key measure used to assess risk is volatility of returns, using historic net asset value (NAV) performance of the trust over 1 and 3 years. In this instance volatility measures how much a trust's NAV fluctuates over time in relation to the FTSE All-Share Index. The higher a volatility figure, the more the NAV has fluctuated (both up and down) against this index over time. Please note that risk categorisations are indicative and based principally on historic data and should not be solely relied upon when making investment decisions.

## Specific risks

- Most of the investments in this portfolio are not made in Sterling, so exchange rates could affect the value and income from your investment.
- Most of the investments in this portfolio are in smaller companies shares. They may be more difficult to buy and sell and their share price may fluctuate more than that of larger companies.
- If a fund is a specialist country-specific or geographic regional fund, the investment carries greater risk than a more internationally diversified portfolio.
