

# **UK 2 Investment Series**

Annual Report Authorised Corporate Director's Short Report

Issued May 2014

For the year 1 April 2013 to 31 March 2014

Conte	nts
02	Invesco Perpetual Income Fund
12	Invesco Perpetual UK Enhanced Index Fund
19	Invesco Perpetual UK Strategic Income Fund

### **Further Information**

This Short Report, which is unaudited, has been prepared in accordance with the Open-Ended Investment Companies Regulations 2001. The Authorised Corporate Director's Long Form Financial Statements, and the Prospectus which contains a written statement of the Terms and Conditions of the Company, can be obtained using the contact details shown on the back cover.

### Investment objective change

Effective 7 January 2014, the investment objectives and policies of the Invesco Perpetual Income Fund and Invesco Perpetual UK Strategic Income Fund were amended to make it more transparent to all existing and potential shareholders that the funds currently invest in unlisted securities. The funds currently have the ability to invest up to 10% of their net asset value in unapproved securities, such as unlisted securities (securities not listed on a stock exchange).

The Invesco Perpetual Income Fund and Invesco Perpetual UK Strategic Income Fund currently have holdings significantly below this limit in these types of securities.

### Taking fees to capital

Effective 1 February 2014 the company has changed the way fees are charged to the following funds: Invesco Perpetual Income Fund Invesco Perpetual UK Strategic Income Fund

The annual management charge of the above funds, which makes up the majority of the ongoing charge, was taken from capital and all other ongoing charges were taken from income, which reduced the amount of income payable to Shareholders. As one of the key objectives of these funds is to provide income, from 1 February 2014 all ongoing charges are taken from capital. This will mean more income will be available for distribution to Shareholders.

#### **New Fee Structure**

From 1 April 2014, the Fund Management Fee (FMF) replaced the separate annual management charges, registration fees and fund administration costs. There has been no change to the already existing entry charges or the way in which portfolio transaction costs are charged.

The FMF covers Invesco Perpetual's management of the funds, the fees and expenses for establishing and maintaining the share register with shareholders' details, and costs that must be met to ensure a fund is appropriately governed and administered (including services such as custody, auditing and fund administration). The FMF is equivalent to the ongoing charge. The FMF excludes portfolio transaction costs as these costs cannot be predicted in advance.

#### Master Fund

Please note that the Invesco Perpetual Income Fund (a sub fund of Invesco Perpetual UK 2 Investment Series) is a master UCITS under the FCA Rules. It is not itself a feeder UCITS and it may not hold units or shares in a feeder UCITS.

#### Launch of new 'Y' share classes on 31 March 2014

New 'Y' share classes, Accumulation shares and Income shares, were launched at 200p per share for the Invesco Perpetual Income Fund and Invesco Perpetual UK Strategic Income Fund.

Further details can be obtained from the most up to date relevant fund and share class specific Key Investor Information Document(s).

### Investment objective

The fund aims to achieve a reasonable level of income, together with capital growth. The fund intends to invest primarily in UK companies, with the balance invested internationally. In pursuing this objective, the fund managers may include investments that they consider appropriate which include transferable securities, unlisted securities, money market instruments, warrants, collective investment schemes, deposits and other permitted investments and transactions as detailed in Appendix 2 of the most recent Prospectus.

#### Risk profile

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Over time, inflation may erode the value of investments. The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments, reduce the costs of investing or generate additional capital or income. although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The Manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund. As one of the key objectives of the fund is to provide income, the annual management charge is taken from capital rather than income. This can erode capital and reduce the potential for capital growth. The fund's performance may be adversely affected by variations in the relative strength of world currencies or if Sterling strengthens against those currencies.

### Strategy, review and outlook

In the twelve months to 31 March 2014, the fund rose in value by 13.1%, compared to the 8.8% return of the FTSE All-Share Index. This placed the fund in the second quartile of its peer group, the IMA UK Equity Income Sector, which gained by an average of 13.4%.

Fund and sector average performance data source: Lipper, mid-to-mid (excluding the entry charge), in Sterling, with net income reinvested. FTSE All-Share Index data source: Thomson Reuters Datastream, total return, in Sterling.

Past performance is not a guide to future returns.

With the exception of a relatively short period the increase in the value of the UK stock market over the last 12 months was characterised by a steady positive trend with generally diminishing volatility compared to previous years. The exception to this trading pattern was from mid-May to mid-June 2013 when the FTSE All-Share Index fell by about 11%. This hiatus was caused by the realisation that the US Federal Reserve would soon start to reduce the amount of monetary stimulus that it was putting into to the economy. As the following months unfolded it then became apparent that this change was to be postponed, mainly due to an expected disruption to the US economy from their self-imposed government shut down. The UK stock market was then able to follow the US stock market with its positive momentum aided then by an increasing number of positive reports on the UK economy. An example of which was the increase in February by the Bank of England in its forecast for 2014 UK GDP growth from 2.8% to 3.4%.

The fund is heavily invested in the pharmaceutical sector, which had a beneficial impact on performance. This sector has been helped by an increasing trend from the regulatory authorities to approve more drugs for public use.

The fund's outperformance of its benchmark index was helped by the holdings in BT Group and AstraZeneca. The former owed its share price rise to the progress it had made with their cost cutting and the investments made in the roll out of broadband service as well as its new TV sports channels.

AstraZeneca's shares performed well due to its prediction that revenue will rebound more quickly than most analysts expect following the acquisition of a stake, from Bristol-Myers Squibb, in a diabetes treatment business. In addition the CEO commented that it now had 11 potential new drugs in late stage development and 27 in phase two development.

In contrast there were negative contributions to the fund's performance from Serco and Centrica, Serco's share price performance was impacted by the company's warning that its 2014 profits would fall sharply. The company cited the scaling back of its largest contract - a five vear deal to manage onshore detention centres for the Department of Immigration and Citizenship in Australia. On a more positive note, the company is now eligible to bid for the Defence Infrastructure Organisation (DIO) contract, after the UK government said it was reassured that Serco "had developed a thorough plan for corporate renewal" and that "this plan represents the right direction of travel to meet our expectations as a customer".

Centrica's share price suffered from the proposal by the Labour Party that, if elected, it would seek to introduce a price freeze on energy bills and by the unusually warm winter in the UK which has lowered demand for energy related products.

The stock market's recent rise has been accompanied by an improving outlook for UK economic growth. However, the uncertainty about the strength of growth in emerging markets, especially China, is not supportive for global growth. However, we believe there are areas within the UK equity market that look attractive. The fund is positioned with a focus on companies which we believe can not only grow revenues and profits, but are also strengthened by management teams that are focused on delivering sustainable, long-term, dividend growth.

### Mark Barnett, Fund Manager

Where Mark Barnett has expressed opinions, they are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco Perpetual investment professionals.

After 25 years<sup>1</sup>, Neil Woodford - formerly Head of UK Equities and fund manager of the Invesco Perpetual Income Fund - left Invesco Perpetual on 29 April 2014. Fund Manager Mark Barnett took over as Head of UK Equities and fund manager of the Invesco Perpetual Income Fund on 6 March 2014.

As at 31 December 2013 (source: Invesco Perpetual)

### Investment objective

The fund aims to achieve long term capital growth from investment primarily through a portfolio of investments in UK companies. In pursuing this objective, the fund managers may include other investments that they consider appropriate which include transferable securities, money market instruments, warrants, collective investment schemes, deposits and other permitted investments and transactions as detailed in Appendix 2 of the most recent Prospectus.

### Risk profile

The value of investments and income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Over time, inflation may erode the value of investments. The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments, reduce the costs of investing or generate additional capital or income. although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The Manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund. The fund's performance may be adversely affected by variations in the relative strength of world currencies or if Sterling strengthens against those currencies.

### Strategy, review and outlook

The fund rose by 10.1% over the twelve months to the end of March 2014, compared to a 8.8% gain in the FTSE All-Share (ex Investment Trusts) Index. This placed the fund in the second quartile of its peer group, the IMA UK All Companies Sector, which ended the period an average of 14.1% higher.

Fund and sector average performance data source: Lipper, mid-to-mid (excluding the entry charge), Sterling, with net income reinvested. FTSE All-Share (ex Investment Trusts) Index data source: Thomson Datastream, total return, in Sterling.

Past performance is not a guide to future returns.

UK equity markets were up over the reporting period as macroeconomic improvements continued. The 2013 GDP growth figure indicated the fastest rate of expansion in three years and can be seen as an evidence for a sustained recovery. In February 2014, the Bank of England raised its 2014 forecast for UK GDP to 3.4% from 2.8%. Furthermore, rising UK investor optimism was observed. This optimism was reflected in the way markets took in their stride the "tapering" of the high level of US monetary stimulus which had been anticipated for months. The Governor of the Bank of England said that any adjustments to interest rates would be gradual and limited.

The fund's performance is generated through a quantitative bottom-up investment process driven by stock selection and based on four concepts: Earnings Momentum, Price Trend, Management Action and Relative Value. Relative risk is controlled with the help of an optimiser, an analysis tool that recommends trades to maximise portfolio exposure to the selected stocks within pre-determined risk/return parameters. In terms of portfolio construction, we tightly constrain the risk taken in sectors and industries.

Stock selection was the main driver for the fund's outperformance, with our Price Trend and Relative Value factors adding most. In terms of individual stock performance, overweight positions relative to the benchmark in WH Smith. Next and ITV contributed positively. Conversely, underweight positions in Lloyds, Aviva and Vodafone weighed on the fund's performance. We recently added shares of Associated British Foods and African Barrick Gold, one of the largest gold producers in Africa, to the portfolio, Furthermore, we increased our shares in TUI Travel, a tourism company. These decisions were based on attractive scores mainly coming from our Earnings Momentum and Price Trend concepts. Conversely, we sold out of William Hill, a UK-based bookmaker, and reduced our positions in the facility management company Regus and Diageo, an alcoholic beverages company. These stocks showed below average attractiveness, mainly driven by weak Earnings Revision scores.

Our diversified and disciplined approach to stock selection favours companies that, in our view, are attractively valued, have good earnings and price momentum and have management acting in the interest of shareholders. We believe that we can add value through the systematic application of fundamental and behavioural insights. Disciplined portfolio construction and cost effective trading are integral to our investment process, which we believe should help us preserve value added from stock selection and reduce the probability of significant underperformance.

### Michael Fraikin, Fund Manager

Where Michael Fraikin has expressed opinions, they are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco Perpetual investment professionals.

### **Fund facts**

Launch date 16 February 1993 Fund size at 31.3.14 £74.4 million Accounting date 31 March 1 April and 1 October Ex-dividend date Distribution payable 31 May and 30 November ACD's fund management fee 0.38% per annum Entry charge 5% Ongoing charges figure (OCF) for the year ended 31.3.14 0.41% Ongoing charges figure (OCF) for the year ended 31.3.13 0.42%

### Investment objective

The fund aims to produce an above average income with capital growth primarily through a portfolio of investments in UK companies. In pursuing this objective, the fund managers may include other investments that they consider appropriate which include transferable securities, unlisted securities, money market instruments, warrants, collective investment schemes, deposits and other permitted investments and transactions as detailed in Appendix 2 of the most recent Prospectus.

### Risk profile

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Over time, inflation may erode the value of investments. As one of the key objectives of the fund is to provide income, the annual charge is taken from capital rather than income. This can erode capital and reduce the potential for capital growth. The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments. reduce the costs of investing or generate additional capital or income, although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The Manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund. The fund's performance may be adversely affected by variations in the relative strength of world currencies or if Sterling strengthens against those currencies.

### Strategy, review and outlook

The fund rose in value by 18.3% during the twelve months to the end of March 2014 compared to the 8.8% return of the FTSE All-Share Index. This placed the fund in the first quartile of its peer group, the IMA UK Equity Income Sector, which rose by an average of 13.4%.

Fund and sector average performance data source: Lipper, mid-to-mid (excluding the entry charge), in Sterling, with net income reinvested. FTSE All-Share Index data source: Thomson Reuters Datastream, total return, in Sterling.

Past performance is not a guide to future returns.

With the exception of a relatively short period the increase in the value of the UK stock market over the last 12 months was characterised by a steady positive trend with generally diminishing volatility compared to previous years. The exception to this trading pattern was from mid-May to mid-June 2013 when the FTSE All-Share Index fell by about 11%. This hiatus was caused by the realisation that the US Federal Reserve would soon start to reduce the amount of monetary stimulus that it was putting into the economy. As the following months unfolded it then became apparent that this change was to be postponed, mainly due to an expected disruption to the US economy from their self-imposed government shut down. The UK stock market was then able to follow the US stock market with its positive momentum aided then by an increasing number of positive reports on the UK economy. An example of which was the increase in February by the Bank of England in its forecast for 2014 UK GDP growth from 2.8% to 3.4%.

The fund's outperformance of its benchmark index was helped by the holdings in BT Group, Thomas Cook and AstraZeneca. The first owed its share price rise to the progress it had made with its cost cutting and the investments made in the roll out of broadband service as well as its new TV sports channels.

The performance of the shares of Thomas Cook was in part due to its good results, confirming the company's on-going recovery. In the statement the management spoke about their confidence in meeting its targets for long term profitable growth. Subsequent to this the company updated investors by saving that by the end of March 2014 50% of its 2014 summer holidays had been sold. AstraZeneca's shares performed well due to its prediction that revenue will rebound more quickly than most analysts expect following the acquisition of a stake. from Bristol-Myers Squibb, in a diabetes treatment business. In addition the CEO commented that it now had 11 potential new drugs in late stage development and 27 in phase two development.

In contrast to the above mentioned companies there was a negative impact on the fund's performance from Ladbrokes and Serco. Ladbrokes' share price suffered from some disappointing results it reported in the period under review as well as the proposal by the Chancellor in the Budget to raise the duty on fixed odds betting terminals. Serco's share price performance was impacted by the company's warning that its 2014 profits would fall sharply. The company cited the scaling back of its largest contract - a five vear deal to manage onshore detention centres for the Department of Immigration and Citizenship in Australia.

The stock market's recent rise has been accompanied by an improving outlook for UK economic growth. However, the uncertainty about the strength of growth in emerging markets, especially China, is not supportive for global growth. However, we believe there are areas within the UK equity market that look attractive. The fund is positioned with a focus on companies which we believe can not only grow revenues and profits, but are also strengthened by management teams that are focused on delivering sustainable, long-term, dividend growth.
