American Fund

Summary of the Fund's investment objective and policy

The Fund aims to grow the value of your investment over the long term.

The Fund invests primarily in the shares of US companies and in related derivatives (financial contracts whose value is linked to the price of an underlying asset).

The Investment Manager is free to choose how the Fund is invested and does not manage it with reference to an index.

Full details on this Fund's investment objective and policy can be found in the Prospectus.

Performance record[†]

For the six months ending 30 June 2012 the value of the 'A' shares of the Fund* fell 2.2%, while the S&P 500 NDR (net dividends reinvested) Index** returned 8.1% and IMA North America** returned 5.0% in sterling terms.

We are long-term, individual stock selecting, fundamental investors. However in this risk-on/risk-off environment¹, company fundamentals are largely being ignored, in our opinion. As the crisis in Europe continues, relative performance has been driven more by the risk-on/risk-off cycle than by the fundamental development of individual firms. During the first quarter, for example, fears of euro disintegration ebbed and US equity markets were buoyed. But in the second quarter, the Greek elections ignited deep concerns over sovereign debt and European bank health, and US equity markets contracted sharply, reversing the first quarter's gains.

Our view is that the near-zero interest rate environment is temporary and that both banks and insurers are trading very cheaply, relative to more normal levels of profitability. Over the period, these cheap stocks have become even cheaper, but we believe the underlying value of the companies has actually been growing as companies have generated earnings and used them to strengthen their balance sheets. Some of our financial holdings performed reasonably well during the first quarter but came under pressure during the second three months and were detractors from performance during the period. They include MetLife, Genworth Financial, and Citigroup.

Just as we believe interest rates are likely to return to normal over time, we believe that the US economy should improve. But markets, driven by generalised fears of a deep European recession and moderating US and Chinese growth, appear to be pricing in major cyclical headwinds.

An example of a holding with high perceived cyclical exposure is United States Steel, which was among the top detractors for the period. But United States Steel serves markets that are picking up: oilfield services are experiencing strong demand due to increased US oil and gas production; the US auto sector is in the midst of a robust recovery; and there are signs of life in commercial real estate construction. Importantly, the company's competitive position has improved since the last cyclical peak, as wages and currencies have appreciated in China and other emerging market steel producing countries (while staying flat in the US). Staples, another of the top detractors from performance, trended lower due to demand concerns, weak employment growth, and sagging business confidence – all of which weighed upon the stock. MEMC Electronic Materials' stock price, while not under as much purely cyclical pressure, performed very poorly following weak earnings and the Chief Financial Officer's departure during the second quarter.

¹ An environment where market sentiment swings back and forth between optimism and buying perceived riskier assets such as equities (risk-on) and pessimism and looking to sell riskier assets (risk-off)

Gilead Sciences was the top contributor to performance during the six months. It and Bristol-Myers Squibb reported strong data from a combination trial in Hepatitis C during the quarter, further solidifying Gilead's likely leading position in the treatment of the virus when the product is approved. Gilead's HIV business continues to develop as expected, supporting the valuation of the company.

Chief Executive Officer Glenn Murphy's dogged restructuring efforts at The Gap, were finally reflected in the stock price during the six months, as the company was among the Fund's top contributors to return.

Community Health Systems was also among the leading contributors for the period. The company has a long history of consistent earnings growth, yet traded at a low valuation at the beginning of the quarter. The recent US Supreme Court healthcare decision positively impacted the stock and the market has begun to recognise the company's strong growth, yet the stock still trades at what we believe to be a low valuation. Other positive contributors to performance were PulteGroup and Apple.

Significant purchases (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Halliburton, Citigroup, Yum! Brands, Anadarko Petroleum, Intel

Significant sales (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Hewlett Packard, SandRidge Energy, Gilead Sciences, Dell, The Gap, Apache

^{*}Source: Lipper, total return, net of UK basic rate tax, no initial charge, net of fees in GBP.

^{**}Index shown for performance comparison purposes only.

Risk and Reward profile* Lower risk Potentially lower rewards Potentially higher rewards 1 2 3 4 5 6 7

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk and reward category shown is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean 'risk free'.

The value of your investment can fall as well as rise and you are not certain of making profits; losses may be made.

The Fund appears at the higher end of the Risk and Reward Indicator scale. This is because it invests in the shares of companies, whose values tend to fluctuate more widely.

The following risks may not be fully captured by the Risk and Reward Indicator:

The investments of the Fund are primarily concentrated in one country. This may mean that there are times when the value of the Fund decreases even while more broadly invested funds are growing.

Changes between the values of different international currencies may adversely affect the value of the Fund's investments and any related income.

*The risk and reward profile is taken from the Key Investor Information Document. Please note that, the risk and reward profile section is based on Sterling "A" Class Accumulation shares.

The full list of the Fund's risks are contained in Appendix VII of the Investec Funds Series ii Prospectus.

Summary of the Fund's investment objective and policy

The Fund aims to grow the value of your investment over the long term.

The Fund invests primarily in the shares of companies in the Asian region (excluding Japan) and in related derivatives (financial contracts whose value is linked to the price of an underlying asset). The Fund seeks to invest in companies that are expected to benefit from Chinese economic growth and development.

The Investment Manager is free to choose how the Fund is invested. However, the MSCI All Countries Asia ex Japan Index is taken into account when the Fund's investments are selected.

Full details on this Fund's investment objective and policy can be found in the Prospectus.

Performance record

For the six months ending 30 June 2012 the value of the 'A' shares of the Fund* returned 4.1%, while the MSCI AC Asia ex Japan NDR (net dividends reinvested) Index** returned 5.0% and IMA Asia Pacific excluding Japan** returned 4.4% in sterling terms.

After a difficult 2011, Asian equity markets began 2012 strongly, aided by improving economic momentum in Europe and the United States and action from central banks to maintain low interest rates. Unexpectedly weaker data from China on trade and growth expectations hurt sentiment during the period and exerted a strong influence on Asian equities. Despite wide fluctuations Asian equity markets marginally outperformed global markets during the first six months of 2012.

The Fund saw good performance during the period across the telecommunications and utilities, resources and industrials super sectors. A poor performance from the retailing and insurance sectors, however, reduced some of the Fund's returns.

The industrials sector was the strongest contributor to performance over the period. This was mainly down to good stock picking in capital goods stocks, namely Samsung Heavy Industries, which reported good earnings and strong order momentum in the offshore segment. In resources, we were aided from being underweight materials stocks, which were weak due to poor earnings reports. In services, we benefited from our overweight position and good stock picking in the automobile space. Hyundai Motor and Kia Motors were strong after reporting better-than-expected earnings – they continue to grow global market share and margins moved upwards after a slight blip in the fourth quarter of 2011. Great Wall Motor, the Chinese SUV and pick-up truck maker, outperformed after good first quarter numbers where growth was much stronger than expected.

Within retailing, our overweight holdings in jewellery chain store Luk Fook Holdings and Hyundai Department Store hurt performance as same store sales have been weak in the sector and margins are coming under pressure due to discounting (as competitors compete for growth). Luk Fook also suffered as consumers are avoiding purchases of gold due to the metal's poor performance this year; furthermore a large portion of its inventory was purchased at higher gold prices prior to the fall in the price of the metal. We sold this stock in May.

Other detractors in the resources sector, included Chinese coal (such as China Shenhua Energy and Yanzhou Coal) and oil stocks (including CNOOC and Sinopec), which were hurt by weak underlying commodity prices, due to fragile Chinese and global growth.

Significant purchases (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Hon Hai Precision Industry, Samsung Electronics, CNOOC, China Overseas Land & Investment, Sime Darby

Significant sales (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

CNOOC, Hon Hai Precision Industry, Hyundai Mobis, Bangkok Bank, China Merchants

Outlook

Markets have bounced in the short term at the end of June, after being very oversold at the end of May. We are cautiously optimistic for the rest of the year. While Europe continues to dominate the headlines and the path to Europe's solution is a long and bumpy one, it is encouraging to see politicians appear to be on the right path. Sentiment is still depressed and equities are under-owned. According to Emerging Portfolio Fund Research (EPFR), the global funds flow database, Asia ex Japan funds have seen \$5.2 billion of outflows this year, after \$24.2 billion of outflows in 2011 - a staggering figure versus history. Valuations look cheap relative to history and earnings revisions appear to have turned the corner. Falling commodity prices have lowered inflationary pressures allowing central banks to step up monetary easing. This should also help improve corporate profit margins. While macroeconomic data has been deteriorating around the world, one could argue that the pace of deterioration is slowing. We believe Asia remains an attractive investment destination from a structural perspective given superior growth prospects driven by rising consumerism, low debt levels and the need for upgrading of infrastructure. Asian governments and central banks have room to stimulate their economies. We believe a disciplined bottom-up investment process that focuses on return on capital and shareholder returns, improving profitability, valuations and share price momentum is best placed to capture the positive dynamic the region has to offer.

European Fund

Summary of the Fund's investment objective and policy

The Fund aims to grow the value of your investment over the long term.

The Fund invests primarily in the shares of companies in Europe (excluding the UK) and in related derivatives (financial contracts whose value is linked to the price of an underlying asset).

The Investment Manager is free to choose how the Fund is invested and does not manage it with reference to an index.

Full details on this Fund's investment objective and policy can be found in the Prospectus.

Performance record

For the six months ending 30 June 2012 the value of the 'A' shares of the Fund* returned 4.7%, while the MSCI Europe ex UK NDR (net dividends reinvested) Index** returned 0.9% and IMA Europe excluding UK** returned 1.7% in sterling terms.

European equity markets started the year strongly, as concerns about growth due to the eurozone sovereign debt crisis subsided. Companies reported robust first quarter 2012 corporate results and were reasonably confident about the outlook. However, the second quarter gave back almost all the gains seen in the first quarter on concerns that the Chinese economy was slowing down sooner than expected. Furthermore, the euro-zone crisis came back into focus due to Spain's weak banking sector and two elections required in Greece to elect a coalition government.

Central banks have been very active in the last six months: China cut banks' reserve requirement three times; Japan increased its stimulus programme by \$123 billion; and EU leaders agreed to use the bailout funds to directly support struggling banks.

In general, stocks that performed well over the period exhibited high quality, resilient growth characteristics, with investors chasing these to levels where the valuation case started to look stretched. Examples included Henkel, Anheuser-Busch InBev and Kerry Group, all of which the Fund held. The automotive sector performed well, as car sales continued to recover from low levels and smaller, more fuel-efficient cars won market share, which favoured European manufacturers. The Fund's holdings in Volkswagen, BMW, Continental and Pirelli all contributed positively to performance.

Banks and telecommunications and utilities performed poorly. These sectors appear to make up the 'value' end of the stock market, with their low valuations. However, for the banks, disappointing operating performance, due to poor demand combined with rising costs and balance sheets worries regarding asset quality, meant many banking stocks hit new lows. For telecommunication shares, increasing competition and the need to invest in networks meant balance sheets became stretched. Utility shares also suffered as weak demand and a leveraged (high debt to equity ratio) balance sheet exposed the risks of their business model. Furthermore, signs that several governments would implement measures to help fix budget deficits hurt utility stocks. The Fund had almost no exposure to these sectors.

The healthcare sector was another positive contributor to performance, with Novo Nordisk and Bayer on the pharmaceutical side, and Fresenius, Gerresheimer and Getinge, on the medical equipment side.

In terms of portfolio activity, we reduced our holdings in financials with the sale of UBS, BNP Paribas and Allianz. We increased our exposure to healthcare with the purchase of Sanofi. Elsewhere we bought shares in Teleperformance, global leader in call centres, and Drillisch, German mobile reseller at the budget end, which replaced Millicom International in the telecom sector, as the outlook for revenue growth in Latin America and Africa deteriorated.

Significant purchases (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Sanofi, Teleperformance, Koninklijke Ahold, TOTAL, Deutsche Post

Significant sales (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Nestlé, Siemens, ASML, Telefonaktiebolaget LM Ericsson, Henkel

Outlook

It is clear that the second quarter of 2012 has seen a discernible shift in earnings expectations for listed corporations. To a large extent the shift to a negative expectation set from a small positive at the end of the first quarter appears to be a reaction to macroeconomic growth headlines as opposed to a disappointment in achieved earnings. The general reluctance of many strong first quarter earners to upgrade expectations for the year and some cautious statements from managers as to the outlook for the remainder of 2012 has undermined analysts' resistance in their forecasts and resulted in many broad 'industry headwind' justified earnings downgrades. The second quarter reporting season should provide an insight into whether this more negative outlook is justified, or whether companies will be able to exceed these modified expectations, as they have managed to do for so many recent quarters. It will also be instructive as to whether or not there proves to be a greater propensity for managers to give more certain full year guidance.

Although it seems unlikely that a generally better earnings season will be enough to enable jittery investors to look beyond the headlines and focus on the evidence on a company-specific basis, we believe that we are nowhere near the levels of interdependency seen in 2011. Our experience this year has and will likely continue to be that individual stock selection will prove to be of the highest importance in generating alpha¹. This follows years of increasing correlation and a risk-on/ risk-off market environment², which has created opportunities to buy high quality companies cheaply across our universe.

So our message remains positive with June demonstrating again that at current valuation levels progress can be made despite an atmosphere of fear. Equities appear very attractive relative to bonds and, if margins can be maintained, are intrinsically cheap in an absolute sense. Some positive surprises in the coming earnings season will be helpful, but companies increasing their focus on result and returning cash to shareholders could prove to be the most productive method of attracting money to the European equity market.

The outlook statement reflects the views of the output from our 4Factor process and is therefore similar to that of the Investec Global Free Enterprise Fund.

Global Energy Fund

Summary of the Fund's investment objective and policy

The Fund aims to grow the value of your investment over the long term.

The Fund invests around the world primarily in the shares of companies and in related derivatives (financial contracts whose value is linked to the price of an underlying asset). The companies are those that are involved in the exploration, production or distribution of oil, gas and other energy sources or those that service the energy industry.

The Investment Manager is free to choose how the Fund is invested and does not manage it with reference to an index.

Full details on this Fund's investment objective and policy can be found in the Prospectus.

Performance record

For the six months ending 30 June 2012 the 'A' shares of the Fund fell 8.1%*. Over the same period the performance comparison index the MSCI World Energy NDR (net dividends reinvested) Index** fell 5.2% and Lipper Global Equity Sector Natural Resource** fell 10.0% in sterling terms.

Macroeconomic concerns and general market and energy price fluctuations dominated the first half of 2012. New Year optimism was quickly overshadowed by concerns about the sovereign debt crisis in Europe, a potential slowdown of the Chinese economy and a faltering US recovery.

The flight to perceived safe assets (UK, German and US government bonds), which began in March, was partially reversed later in the period. However, the US dollar's strength in the interim, in which most commodities are denominated, was an important reason for the 3.7% drop in the DJUBS Commodity Index over first half of 2012. Similarly, energy equities fell, with the MSCI World Energy NDR Index down 5.2%. Energy equities continue to trade at a discount to (below) the current oil price.

West Texas Intermediate (WTI) crude oil finished June at \$84.9 per barrel (bl), falling 15.3% (in sterling terms) for the period and almost 30% from the high in February. Brent crude oil finished the period at \$97.8/bl. Oil prices rebounded dramatically (over 9% for WTI and 7% for Brent) on the last day of June, due to improving European sentiment, supply concerns and anticipation of the European embargo on importing Iranian oil.

US natural gas prices fell 6.5% (GBP) during the period to finish June at just over \$2.8 per thousand cubic feet (mcf). However, since the April low of \$1.9/mcf we have seen the price rise almost 50%, as evidence of production shut-ins, a declining rig count and hotter-than-expected weather had a positive effect on the price. We have seen US natural gas production growth slow and are seeing significant levels of natural gas storage in the US, which should guarantee full natural gas storage at the end of the injection season this year (September/October 2012).

Asian liquefied natural gas (LNG) continues to be a tight market, with prices surging to four-year highs around \$17 per million metric British thermal units (mmBtu) – an increase of approximately 20% in the past year.

The Fund held the following broad energy sub-sector composition at the end of June with the balance in cash.

Integrated oil companies and refiners (40% weight): We hold positions in high quality European integrated oil companies with strong balance sheets, free cash generation and attractive dividend yields, including Royal Dutch Shell, TOTAL, ENI and Petroleo Brasileiro. We aim to take advantage of the significant disconnect between the oil price and a number of these

companies. However, we continue to believe that in a rising oil price environment there are better valuation opportunities in other energy sub-sectors.

Exploration & production (35% weight): We hold a relatively high weighting in this sector. We have taken advantage of weaker equity valuations to buy high quality companies with a low cost position, as well as production growth and attractive asset-backed valuation. Significant positions include Apache, Talisman and Southwestern.

Service companies (18% weight): We maintain a high weighting in the oil services sector. Significant positions include Halliburton, Petroleum Geo-Services (PGS), Schlumberger and Baker Hughes. We believe that the investment cycle in the oil and gas industry has significantly further to run and that our holdings are not valued accordingly.

Significant purchases (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Royal Dutch Shell 'B' Shares, Halliburton, Schlumberger, Baker Hughes, Exxon Mobil, Patterson-UTI Energy, Repsol, Lukoil, Newfield Exploration

Significant sales (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Weatherford International, Transocean, PetroBakken Energy, Petroleo Brasileiro, Gazprom, Ophir Energy, Murphy Oil, SBM Offshore, Baker Hughes, Canadian Natural Resources

Outlook

We believe that although resource equity valuations appear generally attractive across the board, energy equity valuations look most compelling in the current environment for those willing to look beyond the near term uncertainty surrounding the euro zone, Chinese slowdown and other macroeconomic factors.

Based on our fundamental analysis of the global energy sector, we see significant potential value upside in many energy equities, based on a long-term oil price assumption of \$100/bl and a long-term gas price assumption of \$5/mcf. The Fund has a bias towards companies that have the resource base to deliver organic growth over the next four years, which we estimate could lead to earnings growth in excess of 10% per annum across the Fund.

This potential growth in value requires stock markets to properly reflect the value of sustained cashflow generation and asset quality, and we expect this to happen as oil prices remain high and market fluctuations normalise. In the event of a deteriorating global economic outlook (predominantly as a result of European sovereign debt concerns) we would not expect the full value of the portfolio to be recognised in the near term by stock markets. Outside of these very attractive valuations and economical headwinds, we believe the long-term fundamental outlook for investing in energy remains very strong.

^{**}Index shown for performance comparison purposes only.

Risk and Reward profile* Lower risk Potentially lower rewards Potentially higher rewards 1 2 3 4 5 6 7

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk and reward category shown is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean 'risk free'.

The value of your investment can fall as well as rise and you are not certain of making profits; losses may be made.

The Fund appears at the higher end of the Risk and Reward Indicator scale. This is because it invests in the shares of companies whose values tend to fluctuate more widely.

The following risks may not be fully captured by the Risk and Reward Indicator:

The Fund invests in a narrow range of investments and specialised sectors. This may lead to its returns fluctuating more widely than those of more broadly invested funds. It may also mean that there are times when the value of the Fund decreases even while more broadly invested funds are growing.

It may not be possible to sell smaller company shares as easily as those of larger companies. This could mean that their value fluctuates more widely and that the price obtained for these investments when they are sold is less than expected.

*The risk and reward profile is taken from the Key Investor Information Document. Please note that, the risk and reward profile section is based on Sterling "A" Class Accumulation shares.

The full list of the Fund's risks are contained in Appendix VII of the Investec Funds Series ii Prospectus.

Summary of the Fund's investment objective and policy

The Fund aims to grow the value of your investment over the long term.

The Fund invests around the world primarily in the shares of companies and in related derivatives (financial contracts whose value is linked to the price of an underlying asset). These companies are expected to benefit from privatisation, regulatory change or demutualisation (e.g. a building society becoming a company) or believed to offer good growth potential.

The Investment Manager is free to choose how the Fund is invested and does not manage it with reference to an index.

Full details on this Fund's investment objective and policy can be found in the Prospectus.

Performance record

For the six months ending 30 June 2012 the value of the 'A' shares of the Fund* returned 4.2%, while the MSCI AC World NDR (net dividends reinvested) Index** returned 4.7% and IMA Global** returned 2.6% in sterling terms.

The Fund saw good performance during the period from good stock selection in the services (particularly retailing and media stocks), technology and industrials super sectors. A poor performance from the financials super sector, however, detracted from returns.

Our significant overweight position in priceline.com contributed to performance, as the stock responded to yet another set of excellent results which saw continued growth for the platform, despite feared consumer spending headwinds leading to a reduction in travel. The shift to digital media and exposure to emerging markets helped our media stocks to outperform: the US-based provider of entertainment, information and communication products, Comcast, saw its share price jump following strong first quarter results and earnings upgrades, while IMAX performed well over the six months as a series of films, including *The Hunger Games, Marvel's The Avengers, Men in Black 3* and *Prometheus*, drove sales.

Within the technology super sector owning hardware companies Apple and Hitachi, and semiconductor stocks Samsung Electronics and Avago Technologies made a significant positive contribution.

The Mexican industrial conglomerate Alfa also did well for us. The group is restructuring to an extent which should see its holding company discount erode as it develops into a more focused entity. The stock also benefited from a strong run in the Mexican market, which has gained ground on the back of higher growth expectations and a change in the political landscape.

Within financials, the Fund is underweight European financials and these rallied strongly towards the end of the period following the Greek elections, Spain's bank bailout and news that European leaders are close to agreeing on using the European Stability Mechanism to purchase sovereign bonds. We were also impacted by Banco do Brazil's capital increase.

Other detractors included the energy equipment stock Patterson-UTI Energy as well as Helmerich & Payne, which underperformed over fears that the low gas price will discourage drilling and that a rotation from gas to oil exploration will take time to materialise.

Significant purchases (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Valero Energy, Japan Tobacco, JPMorgan Chase, Illinois Tool Works, Nexon

Significant sales (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Mastercard, priceline.com, Chevron, Biogen Idec, Novo Nordisk

Outlook

It is clear that the second quarter of 2012 has seen a discernible shift in earnings expectations for listed corporations. To a large extent the shift to a negative expectation set from a small positive at the end of the first quarter appears to be a reaction to macroeconomic growth headlines as opposed to a disappointment in achieved earnings. The general reluctance of many strong first quarter earners to upgrade expectations for the year and some cautious statements from managers as to the outlook for the remainder of 2012 has undermined analysts' resistance in their forecasts and resulted in many broad 'industry headwind' justified earnings downgrades. The second quarter reporting season should provide an insight into whether this more negative outlook is justified, or whether companies will be able to exceed these modified expectations, as they have managed to do for so many recent quarters. It will also be instructive as to whether or not there proves to be a greater propensity for managers to give more certain full year guidance.

Although it seems unlikely that a generally better earnings season will be enough to enable jittery investors to look beyond the headlines and focus on the evidence on a company-specific basis, we believe that we are nowhere near the levels of interdependency seen in 2011. Our experience this year has and will likely continue to be that individual stock selection will prove to be of the highest importance in generating alpha¹. This follows years of increasing correlation and a risk-on/ risk-off market environment², which has created opportunities to buy high quality companies cheaply across our universe.

So our message remains positive with June demonstrating again that at current valuation levels progress can be made despite an atmosphere of fear. Equities appear very attractive relative to bonds and, if margins can be maintained, are intrinsically cheap in an absolute sense. Some positive surprises in the coming earnings season will be helpful, but companies increasing their focus on result and returning cash to shareholders could prove to be the most productive method of attracting money to the Global equity market.

The outlook statement reflects the views of the output from our 4Factor process and is therefore similar to that of the Investec European Fund.

Summary of the Fund's investment objective and policy

The Fund aims to provide a high income, paid on a monthly basis.

The Fund invests around the world primarily in bonds (contracts to repay borrowed money which typically pay interest at fixed times) and related derivatives (financial contracts whose value is linked to the price of an underlying asset).

The bonds may be issued by governments, institutions or companies and may be of investment grade (high quality) as rated by the credit rating agencies (companies that rate the ability of the issuers of bonds to repay borrowed money) or below investment grade (if providing a high income).

The Fund will use hedging (an investment technique which aims to protect the value of an investment against currency movements) to minimise any currency risk in sterling.

The Investment Manager is free to choose how the Fund is invested and does not manage it with reference to an index.

Full details on this Fund's investment objective and policy can be found in the Prospectus.

Performance record

For the six months ending 30 June 2012 the 'A' shares of the Fund returned 8.1%*, the IMA £ High Yield sector** returned 6.9% and the Merrill Lynch European Currency Non-Financial High Yield Constrained Hedged** (GBP) performance comparison index returned 12.2%.

The total income distribution for the period in relation to 'A' Income shares was 1.92p per share. This compares to total of 1.92p per share paid for the corresponding period in 2011.

High yield assets performed well over the last six months, especially in the first quarter of 2012. They rallied on positive sentiment after the European Central Bank helped banks meet their short-term liquidity needs by issuing two long term refinancing operations (LTRO). This, coupled with strong US economic data and hopes of a resolution to Greece's problems, led to one of the best first quarter performances for European high yield assets over the last decade.

However, US economic data began to slow in the second quarter and the elections in Greece initially failed to produce a coalition government that would implement the austerity measures needed to secure funding from the European Union. This was further exacerbated by the perceived inaction of European leaders to proactively deal with the on-going crisis, which saw Spanish and Italian bond yields rise sharply. As a result, risk assets sold off. They recouped some of the losses in June, when a better than expected European Summit removed the obligation for bailout funds to have priority over other asset holders and provided a roadmap for a single banking regulator.

Over the period, we have looked to broadly reduce our risk at the aggregate Fund level with sector changes being driven primarily by individual stock selection. For example, our increased exposure in the energy sector is through IPIC – the Abu Dhabi government energy investment vehicle. The bonds are AA-rated but were yielding just under 6% at purchase. We continued to reduce our banking exposure given the on-going turmoil in Europe taking our exposure to close to zero. The credit quality of banks remains inextricably tied to that of its government. In addition, banks are facing forced unwinding of debt requirements, onerous regulation and low growth prospects making the sector unattractive.

Our defensive positioning in the Fund has been a positive driver of returns with the telecommunications sector being the best performing sector over the last six months. We have reduced our exposure to the sector more recently, selling some of our stake in the Japanese telecommunications provider, eAccess, after the company's most recent outlook

statement disappointed. Our exposure to both the healthcare and consumer non-cyclical sectors were positive drivers of performance with our holdings in Care UK, a British care home provider, and Boparan, a major food producer, performing well. The Fund has also benefited from corporate actions this year. Most recently our holdings in Elster, a global manufacturer of electricity smart meters, have risen markedly on news that it is to be acquired by Melrose Plc, an international engineering group. Our exposure to Labco, French laboratory services, has also been a strong driver of performance. Acquisition rumours have seen the company's bonds rally. Edcon, a large South African retailer, successfully sold its store and credit card business over the period driving up its bonds.

Significant purchases (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

IPIC 5.875% 14/03/2021, Carlson Wagonlit 7.5% 15/06/2019, Boparan Finance 9.875% 30/04/2018, Eileme 11.75% 31/01/2020, Linde Finance Floating 14/07/2066

Significant sales (2% of Net Asset Value and above or minimum 5 holdings) during the period comprised:

Kabel BW Musketeer 9.5% 15/03/2021, Europear Floating 15/05/2013, Crown Newco 8.875% 15/02/2019, Lonking 8.5% 03/06/2016, Matalan Finance 8.875% 29/04/2016

Outlook

On the macroeconomic level, the most recent economic data has disappointed, with Europe now slipping towards a recession as the impact of austerity measures and high unemployment drag on growth. Despite this, the number of bankruptcies remains low, with default rates in Europe surprisingly below those in the US. Defaults are forecast to increase, but only very modestly over the remainder of the year. This highlights the robustness of corporate balance sheets and reflects the steps companies have undertaken over the last few years to improve liquidity and profitability. This has generally left them in far better shape than in previous recessionary periods. Given strong company fundamentals and low real interest rates globally, credit remains an attractive asset class over the medium term, although returns in the near term could be volatile as the risk on/risk off mentality¹ persists. As such we remain defensively positioned and we remain a selective buyer of perceived riskier assets.

*Source: Lipper, total return, net of UK basic rate tax, no initial charge, net of fees in GBP.

**Index shown for performance comparison purposes only

¹ An mentality where market sentiment swings back and forth between optimism and buying perceived riskier assets such as equities (risk-on) and pessimism and looking to sell riskier assets (risk-off)

Risk and Reward profile* Lower risk Potentially lower rewards Potentially higher rewards 1 2 3 4 5 6 7

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk and reward category shown is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean 'risk free'.

The value of your investment can fall as well as rise and you are not certain of making profits; losses may be made.

The Fund appears towards the middle of the Risk and Reward Indicator scale. This is because it invests in bonds whose returns tend to fluctuate more than those of cash funds but less than those of funds which invest in the shares of companies.

The following risks may not be fully captured by the Risk and Reward Indicator:

The value of bonds tends to decrease when interest rates and/or inflation rises.

There is a risk that the issuers of bonds may not be able to repay the money they have borrowed nor make any interest payments. This risk is greater than average where the Fund invests in a bond with a below investment grade credit rating (ratings based on the ability of the issuers of bonds to repay borrowed money).

A proportion of the Fund's charges are taken from capital. This will increase the level of income automatically reflected in the value of your shares.

*The risk and reward profile is taken from the Key Investor Information Document. Please note that, the risk and reward profile section is based on Sterling "A" Class Accumulation shares.

The full list of the Fund's risks are contained in Appendix VII of the Investec Funds Series ii Prospectus.

^{*}Bond ratings are Investec approximations

Total purchases, including transaction charges, for the period were £41,879,000 (30.06.11: £105,898,000).

Total sales, net of transaction charges, for the period were £33,747,000 (30.06.11: £94,465,000).

Authorised Corporate Director's report

The Authorised Corporate Director ("ACD") of Investec Funds Series ii (the "Company") is Investec Fund Managers Limited. The ACD is the sole director of the Company.

Authorised Status

The Company is an investment company with variable capital incorporated in England and Wales under registered number IC125 and authorised by the Financial Services Authority ("FSA") with effect from 10 June 2005.

The Company is structured as an umbrella company, in that different sub funds (the "Funds") may be established from time to time by the ACD with the approval of the FSA. The Company currently comprises of six Funds.

The Company (and therefore the Funds) have been certified by the FSA as complying with the conditions necessary for it to enjoy rights conferred by the EC Directive on Undertakings for Collective Investment in Transferable Securities ("UCITS"). The Company has an unlimited duration. The assets of each Fund will be treated as separate from those of every other Fund and will be invested in accordance with the investment objective and investment policy applicable to that Fund. Investment of the assets of each of the Funds must comply with the FSA Collective Investment Scheme ("COLL") Sourcebook and the investment objective and policy of the relevant Fund.

Each Fund has a specific portfolio to which that Fund's assets and liabilities are attributable. So far as shareholders are concerned, each Fund is treated as a separate entity. Creditors of the Company may nevertheless look to all the assets of the Company for payment regardless of the Fund in respect of which that creditor's debt has arisen. Assets may be re-allocated to and from other Funds of the Company in the highly unlikely event that a Fund's assets are insufficient to meet its liabilities. In the event that any assets are so reallocated, the ACD will advise shareholders in the next succeeding annual or half yearly report to shareholders.

Subject to the above, each Fund will be charged with the liabilities, expenses, costs and charges of the Company attributable to that Fund, and within each Fund charges will be allocated between share classes in accordance with their terms of issue. Any assets, liabilities, expenses, costs or charges not attributable to a particular Fund may be allocated by the ACD in a manner which it believes is fair to the shareholders generally. This will normally be pro rata to the net asset value of the relevant Funds.

Accounting period covered by these accounts

The accounting period covered in these accounts is from 1 January 2012 to 30 June 2012.

Changes during the accounting period

The following share class was launched on 2 May 2012:

Monthly High Income, I, Income, Net, GBP

The following USD share classes were launched on 8 May 2012

- American, A, Accumulation, Net, USD
- Global Energy, A, Accumulation, Net, USD
- Global Energy, I, Accumulation, Net, USD
- Global Free Enterprise, A, Accumulation, Net, USD

Other information

On 6 August 2012, notice was given to shareholders that, with effect from 20 August 2012, the ACD would be changing the Investment Management arragements of the American Fund. From this date Thornburg, the sub-investment Manager, are no longer the sub-investment Manager of the fund. Instead the Investment Manager, Investec Asset Management Limited, have assumed direct control of this activity.

- (1) Launched 30 January 2009
- (2) Launched 7 May 2009
- (3) Consolidation 18 July 2011
- (4) Launched 2 May 2012
- (5) Launched 8 May 2012
- (6) The ongoing charges are based on the expenses for the year ending 31 December 2011.

The figure excludes any performance fee and portfolio transaction costs, except in the case of an entry or exit charges paid by the Fund when buying or selling units in another fund. Ongoing charges may vary from year to year. For more information about charges, please see section VII of the Investec Fund Series ii prospectus.

- (7) The ongoing charges are based on the expenses for the year ending 31 December 2011 (adjusted for any material change which took place during the period but which was not fully reflected in these figures).
- (8) The ongoing charges figure shown here is an estimate of the charges, as the share class was only recently launched. The Fund's annual report for each financial year will include details of the exact charges made.

The above portfolio turnover rate figures have been calculated for the period 1 January 2012 to 30 June 2012 based on the following formula:

(p) = pence

The aggregated financial statements represent the sum of the assets and liabilities of the funds which comprise Investec Funds Series ii.

We hereby certify the Interim Report and Accounts on behalf of the Directors of Investec Fund Managers Limited.

A. Gallagher Director of the ACD 20 August 2012

D. Aird Director of the ACD

Notes to the aggregated financial statements

For the period ended 30 June 2012

Accounting policies

The interim financial statements have been prepared in accordance with the Statement of Recommended Practice for Authorised Funds issued by the Investment Management Association in October 2010.

The accounting policies applied are consistent with those of the annual financial statements for the year ended 31 December 2011 and are described in those annual financial statements.

Equalisation

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of all Group 2 shares and is refunded to holders of these shares as a return of capital. Being capital, it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

Other information

ISA status

During the period under review, the shares of the funds met the requirements for eligibility to be held in a stocks and shares ISA as determined by the regulations which govern ISAs.

Investec Fund Managers Limited offer the 'A' shares of the funds through its own ISA plan.

Distributions

Where a distribution is to be paid, it has been calculated as at 30 June 2012 and will be distributed to shareholders, where applicable, on 31 August 2012. On acccumulation shares payments are deemed to be paid on 31 August 2012.

Telephone calls

Telephone calls may be recorded for training and quality assurance purposes.

Total Expense Ratio ('TER') methodology

Definition of TER

The total expense ratio is the ratio of total operating costs of each share class of each of the Funds to its average net assets.

TER = Operating costs (excluding transaction fees)

Average NAV

The ratio will be expressed as a percentage to 2 decimal places.

Operating costs:

- (a) The total operating costs are all the expenses which are shown in the statement of operation (or Statement of Total Return) for the relevant financial period.
- (b) Total operating costs include any legitimate expenses incurred by the Fund such as:
 - management costs including performance fees (regardless if the amounts are charged to capital or income); performance fees will be included in the TER and will also be disclosed separately as a percentage of the average net asset value;
 - administration costs;
 - fees linked to depositary duties, including all custody fees charges (transaction and NAV based) in income or capital;
 - audit fees;
 - payments to shareholder services providers including payments to the Funds' transfer agent and payments to broker-dealers that are record owners of the Funds' shares and that provide sub-accounting services for the beneficial owners of the Funds' shares;
 - payments to lawyers;
 - any distribution or unit cancellation costs charged to the fund;
 - registration fees, regulatory fees and similar charges;
 - any additional remuneration of the management company (or any other party) corresponding to certain fee-sharing agreements.
- (c) The total operating costs do not include:
 - transaction costs which are costs incurred in connection with transactions on its portfolio. These include brokerage fees, taxes and linked charges and the market impact of the transaction taking into account the remuneration of the broker and the liquidity of the concerned assets, but not including fees charged by the depositary;
 - interest on borrowing, or finance costs (e.g. debt interest or overdraft interest);
 - payments incurred because of financial derivative instruments;
 - entry/exit commissions or any other fees paid directly by the investor;
 - dealing commissions;
 - when IAS39 is adopted, transactions costs such as brokerage fees will be included within expenses rather than as cost of purchase or reduced sale proceeds. Such changes in the accounting presentation will not change the TER calculation. Corporation tax relief is not taken into account.

Average NAV

The average net assets are calculated using figures that are based on the Funds net assets at each calculation point of the net asset value (NAV).

Short accounting periods

For short periods, the operating expenses will be annualised based on the short period. However, if the annualisation does not properly reflect the expense that the Fund is likely to incur for the year, then an estimate will be made line-by-line based on previous fees for similar funds. For example, this may occur where one-off fees were charged to the profit and loss account and are unlikely to reoccur. As the TER is an annual percentage rate, if a period shorter than the annual period of account resulted in a material difference to an annual TER then this will be addressed and explained after the publication of the first audited annual financial statements, once the true annual TER has been established.
