Information About the Company During the Period

Old Mutual Investment Funds Series I is an investment company with variable capital incorporated in England and Wales under registration number IC76 and authorised by the Financial Conduct Authority under Regulation 12 of the Open Ended Investment Companies Regulations 2001.

The Company is an umbrella company. The assets of each Fund are treated as separate from those of every other fund and will be invested in accordance with that fund's own investment objective and policy.

Each sub fund of the company belongs to the type of UCITS scheme of the FCA Collective Investment Schemes Sourcebook 2004 Regulations ("COLL Sourcebook").

Liability

The shareholders of the Company have no liability for the debts of the Company.

Sub funds are not legal entities in themselves but form part of the Company. Should the assets attributed to any sub fund be insufficient to meet the liabilities attributable to it, the shortfall cannot be met out of the assets attributed to one or more of the other sub funds.

We hereby certify the financial statements on behalf of Old Mutual Global Investors.

Investment Objectives, Policy and Strategy

The Fund aims to maximise total return through investment in a diversified portfolio of fixed interest and other debt securities.

Subject to the regulations, the property of the fund may include transferable securities; units in collective investment schemes (including those managed or operated by the ACD or an associate of the ACD), warrants, money market instruments, deposits and derivatives. More than 35% in value of the property of the fund may consist of Government and other public securities issued by one issuer in accordance with the investment management and borrowing powers of the Company.

The level of cash held will not normally exceed 20% of the value of the holding of the Fund.

The Fund will be permitted to use derivatives for investment purposes; the net asset value of this Fund may therefore, at times, be highly volatile and the risk profile of this Fund may change.

The Fund is a credit-intensive portfolio of corporate bonds, targeting total return and making full use of interest rate management and asset allocation between sectors and stocks.

The portfolio is actively managed and aims to deliver top quartile performance in the IMA UK Corporate Bond sector.

Review

The second half of 2013 was characterised by an almost symmetrical pattern of rising and falling government bond yields. Following an early summer rally in higher risk assets, mostly robust economic data after mid-July for the UK (and the US), led to growing speculation about the threat of rising inflation. UK government bond yields rose sharply up to mid-September sparking a simultaneous rise in creditrisk premiums. Not surprisingly equities rallied. Soothing words from the Bank of England's Monetary Policy Committee helped to assuage market fears and over the following weeks the rise in yields reversed just as quickly, retreating almost entirely. The pattern was repeated from late October through to the end of the review period. However, the second time round the credit sector was not subject to the jitters seen in the summer, as economic sense prevailed and the market saw excellent subsequent returns. This was only interrupted in January when US economic indicators turned weaker in response to impacts from a string of severe artic storms that plagued the country over the winter.

Outlook

Commentators and markets will increasingly look beyond the weather impacts on US data and realise that the recovery there is still on track, if a bit slower. Of note, there is a new Federal Reserve Chairman, Janet Yellen, who will provide guidance in such matters. UK growth appears to be on track too, although inflation fears have abated somewhat, as commodity prices have begun to stabilise on the back of declining demand from emerging markets. Such a backdrop will likely allow for solid returns from core UK, US and European credit markets as earnings in general look likely to beat expectations, while inflation and government bond yields both track sideways for the time being. We will continue to watch out for periodic hiccups as markets rarely move smoothly in one direction for long, but we are optimistic that returns in 2014 will once again be good. That said, if data firms from here, our inclination is to shorten our duration position to help mitigate the effects of another round of government bond yield volatility.

Risk Warning

Please remember that past performance is not a guide to future performance. The price of shares and the income from them may go down as well as up. You may not get back the amount you invest. The Fund may not be suitable for everyone and if in doubt you should seek advice from your financial adviser.

Bond Funds are affected by changes (real or anticipated) in the rate of inflation or interest rates, which may cause returns on bonds to be more or less attractive. Investment in corporate bonds brings an increased risk of default and may affect the capital value of the Fund.

The yield may fluctuate significantly during times of extreme market volatility.

On occasion, we may not be able to sell the underlying assets in a Fund as quickly as we would like, or at a reasonable price. This liquidity risk could affect the performance of the Fund.

Note:

External sources of underlying economic data used by Old Mutual Global Investors include MSCI, Datastream and FactSet.

Market performance data is sourced from Morningstar / Factset. Each quoted index or stock return is based on the price movement between the market close on 31 July 2009 and the close on 31 January 2014. Returns quoted are sterling or local currency returns as specified.

Net Asset Value per Share and Comparative Tables

The fund was launched on 17 June 2000. Income and accumulation units were first issued on that date at 100p per unit. On 19 September 2007, the fund was converted to a sub fund of an Open Ended Investment Company, Old Mutual Investment Funds Series I. On 21 August 2012 and 13 December 2012, class R income and class R accumulation shares were launched respectively.

Investment Objectives, Policy and Strategy

The Fund aims to maximise total returns by investing primarily in a diversified portfolio of fixed, variable and zero rate bond investments, including convertible securities. There are no specific restrictions as to the economic sectors or geographic areas that the Fund may invest in.

Subject to the regulations, the property of the fund may include transferable securities; units in collective investment schemes (including those managed or operated by the ACD or an associate of the ACD), warrants, money market instruments, deposits and derivatives.

More than 35% in value of the property of the fund may consist of Government and other public securities issued by one issuer in accordance with the investment management and borrowing powers of the Company.

The Fund will be permitted to use derivatives for investment purposes; the net asset value of this Fund may therefore, at times, be highly volatile and the risk profile of this Fund may change.

The fund is an actively managed bond fund with a highly flexible asset allocation mandate which is designed to maximise returns in all market conditions.

The Fund has a strong focus on both asset allocation and stock selection, underpinned by comprehensive credit analysis. It invests across a range of fixed income securities, emphasising those areas that are expected to produce superior returns at any given stage in the cycle.

Review

The second half of 2013 saw strong demand for credit which boosted returns of high yield and financial corporate bonds thanks to strong economic data in the US and gradually better sentiment data out of Europe where the recession appeared to have bottomed out. The rosier backdrop was dampened somewhat in January when US economic indicators suddenly turned weaker on the back of the string of severe winter storms in the US. On the back of budding concerns about potential inflation in the US and the UK, government bond yields rose sharply to 3.2% by mid-January in the UK, but after the Bank of England confirmed to the market that yields would stay low for longer, yields retreated to 2.9% by the end of the month.

Outlook

Despite the weather-related impacts on the US data, we believe that America's recovery is still on track and that the tapering of quantitative easing will cause longer rates to increase as a result of less demand on this segment of the curve and higher inflation expectations in response to rising consumer demand. This will be positive for our short duration and long-credit position in Monthly Income Bond Fund. UK growth appears to be on track too, although inflation fears have abated somewhat, as commodity prices begin to stabilise on the back of declining demand from emerging markets. We continue watching for periodic market volatility in order to take advantage of long credit opportunities and are optimistic that returns in 2014 will once again be good.

Risk Warning

Please remember that past performance is not a guide to future performance. The price of shares and the income from them may go down as well as up. You may not get back the amount you invest. The Fund may not be suitable for everyone and if in doubt you should seek advice from your financial adviser.

Bond funds are affected by changes (real or anticipated) in the rate of inflation or interest rates, which may cause returns on bonds to be more or less attractive. Investment in corporate bonds brings an increased risk of default and may affect the capital value of the Fund.

The yield may fluctuate significantly during times of extreme market volatility.

On occasion, we may not be able to sell the underlying assets in a Fund as quickly as we would like, or at a reasonable price. This liquidity risk could affect the performance of the Fund.

Note:

External sources of underlying economic data used by Old Mutual Global Investors include MSCI, Datastream and FactSet.

Market performance data is sourced from Morningstar / Factset. Each quoted index or stock return is based on the price movement between the market close on 31 July 2009 and the close on 31 January 2014. Returns quoted are sterling or local currency returns as specified.

12 March 2014 Old Mutual Global Investors

Net Asset Value per Share and Comparative Tables

The fund was launched on 15 September 2004. Income and accumulation units were first issued on that date at 50p per unit. On 19 September 2007, the fund was converted to a sub fund of an Open Ended Investment Company, Old Mutual Investment Funds Series I. On 11 January 2013 class R accumulation shares were launched.

Investment Objectives, Policy and Strategy

To achieve an above average yield with growth in income and capital appreciation over the long term, through the active management of a diversified portfolio invested primarily in UK equities.

Subject to the regulations, the property of the fund may include transferable securities; units in collective investment schemes (including those managed or operated by the ACD or an associate of the ACD), warrants, money market instruments, deposits and derivatives.

The Fund will be permitted to use derivatives for investment purposes; the net asset value of this Fund may therefore, at times, be highly volatile and the risk profile of this Fund may change.

The Fund consists of an actively managed portfolio of UK equities drawn from across the market cap spectrum.

The manager employs a total return approach, aiming to achieve growth in capital over the long term whilst also meeting the necessary income requirement, which is to ensure a minimum yield equivalent to 110% of the FTSE All Share Index.

Stock selection involves a combination of bottom-up and top-down analysis and each holding is classified as either core income or core growth.

Review

Equity markets retreated in the first month of the period giving rising political tensions in the Middle East however as these concerns faded investor focus shifted to the political gridlock in the US which resulted a temporary government 'shutdown'. In a similar fashion to what was experienced at the start of the year, an agreement was eventually passed to allow the US government to raise its debt limit and avoid a potentially catastrophic default. Approaching the year end the Federal Reserve announced its intention to begin to reduce its level of financial stimulus to support the economy, otherwise known as tapering, on the condition that the US economy continued to recover. The start of 2014 was a tough month for equity markets given the potentially negative knock-on effect of tapering on emerging markets in combination with some relatively weak US economic data.

The portfolio returned 2.8% during the period, outperforming the FTSE All-Share index which returned 1.1%. Outperformance was modestly biased to stock selection over sector allocation effects. Leading contributors to performance included investments in telecommunications group TalkTalk, packaging company DS Smith, life insurer Legal & General, cash and carry operator Booker Group, self-storage provider Big Yellow Group and broadcaster ITV. Main detractors to performance included holdings in energy suppliers Centrica and SSE, life insurer Standard Life and support service group Capita. At a sector level the portfolio benefited from its underweight positions in consumer goods and oil & gas and its overweight position in telecommunications. Being overweight utilities and underweight basic materials was a drag on performance.

In terms of portfolio activity new additions included Resolution, Aviva and Phoenix Group and the complete sale of Standard Life. In resources our holding in oil company BG Group was sold to start a new position in miner Rio Tinto. Elsewhere we started a new holding in warehouse developer Segro and sold our positions in software company Micro Focus and industrial controls business Invensys.

Outlook

Going forward our outlook for UK equities continues to be positive as we consider current valuations to be attractive whist corporate profits can continue to grow as the global economy recovers. The prospect of rising bond yields as a result of a reduction in financial stimulus measures from central banks may give rise to bouts of volatility in equity markets. However we ultimately consider these developments to be healthy in the longer term. Overweight sectors in the portfolio include life insurance, support and consumer services whilst we continue to be underweight a number of areas in the consumer goods sector, including food producers, beverages and tobacco. We also continue to have a meaningful exposure to those businesses operating domestically where we believe the UK economy is finally showing some signs of life.

Investment Adviser's Report For the period ended 31 January 2014 (continued)

Risk Warning

Please remember that past performance is not a guide to future performance. The price of shares and the income from them may go down as well as up. You may not get back the amount you invest. The Fund may not be suitable for everyone and if in doubt you should seek advice from your financial adviser.

Note:

External sources of underlying economic data used by Old Mutual Global Investors include MSCI, Datastream and FactSet.

Market performance data is sourced from Morningstar / Factset. Each quoted index or stock return is based on the price movement between the market close on 31 July 2009 and the close on 31 January 2014. Returns quoted are sterling or local currency returns as specified.

> 12 March 2014 Old Mutual Global Investors

Net Asset Value Per Share and Comparative Tables

The fund was launched on 30 September 1975. Income units were first issued on that date at 50p per unit. Accumulation units were first issued on 25 March 1986. On 19 September 2007, the fund was converted to a sub fund of an Open Ended Investment Company, Old Mutual Investment Funds Series I. On 2 November 2012 and 19 December 2012 class R income and class R accumulated shares were launched respectively.

Investment Objectives, Policy and Strategy

To provide capital growth from investing primarily in a portfolio of medium sized UK companies.

Medium sized companies are defined for this purpose as those companies that are members of the FTSE Mid 250 (ex Investment Companies) Index. Typically at least 80% of the invested assets will be held in companies meeting this definition. Liquidity will under normal circumstances not exceed 10% of the value of the holding of the Fund.

Subject to the regulations, the property of the fund may include transferable securities; units in collective investment schemes (including those managed or operated by the ACD or an associate of the ACD), warrants, money market instruments, deposits and derivatives.

The Fund will initially only use derivatives for EPM purposes. The Fund may use derivatives for purposes other than EPM, provided it has given shareholders 60 days notice of such change. If the Fund did use derivatives for investment purposes, the net asset value of the Fund would therefore, at times, be highly volatile and the risk profile of the Fund might change.

The UK Mid Cap Fund is an actively managed Fund which aims to provide capital growth from investment in a portfolio of medium sized UK companies.

Holdings are drawn primarily from the FTSE Mid 250 (ex Investment Companies) Index. The fund aims to generate consistent outperformance relative to the index.

Review

Markets performed well in the six months to 31 January 2014. The global economy continued its gradual recovery and of all the major markets, the UK arguably delivered the greatest positive surprise. Central bankers in both the US and the UK sought to reassure investors that they would seek to ensure that recovery was assured before raising interest rates.

The UK mid cap market performed strongly against this backdrop, with the FTSE 250 ex Investment Trusts rising by 7.5% over the six month period. In comparison, the fund produced a positive absolute return, but trailed the benchmark following the strong outperformance it generated in the previous six-month interval. Stock selection was the main factor behind the underperformance. The beneficial impact of the fund's positions in St James's Place, SuperGroup, Foxtons, BTG and Thomas Cook was more than offset by the relative weakness in performance from other holdings, such as easyJet, William Hill, Blinkx, International Personal Finance and Dixons. Elsewhere, not owning Ocado, which performed extremely strongly during the period, also impinged on returns relative to the benchmark, although this negative impact was offset by not owning stocks like Serco and Ladbrokes, which were poor performers.

There were no significant changes of note in the strategic positioning of the fund over the period. The portfolio is still exposed to a number of attractive, stock-specific ideas and companies that will benefit from a better UK economic environment. Activity was mainly for stock-specific reasons. Positions in Britvic, Provident Financial, William Hill and easyJet were sold, either because the manager concluded that the investment case had played out or had deteriorated, whilst Invensys was sold prior to the completion of its acquisition by Schneider Electric. New positions were taken in Daily Mail & General Trust, Optimal Payments, Drax and WS Atkins. The fund's existing position in BTG was also significantly increased. There was a welcome return of the IPO market in 2013, and the fund manager participated in new offerings from estate agency Foxtons and Abu Dhabi healthcare operator Al Noor Hospitals.

Outlook

Looking forward, equity markets are likely to be supported by a combination of improving economic data and exceptionally loose monetary policies in developed economies, while high levels of liquidity across markets should also support investors' appetite for risk and thus serve as a continuing tailwind for equities in general. In the UK equity market, an improving economy should support domesticallyoriented sectors. In such an environment, the UK mid cap market looks very well placed to benefit from all of these dynamics. The manager believes that stock selection will become an increasingly important differentiator of fund returns. Although valuation multiples have moved higher, many attractive opportunities are still being found in which to invest, while a more active IPO market should also provide a range of interesting opportunities over the course of 2014.

As this is a new fund, there is no past performance data available.

Investment Objectives, Policy and Strategy

The Fund aims to deliver an absolute return over rolling three year periods.

Notwithstanding that the Fund is expressed to be an "absolute return" fund, any capital invested is, in fact, at risk. The Fund aims to deliver a positive absolute return over rolling three year periods, but there is no guarantee that such return will be generated over that specific time period or within another time period.

The Fund will obtain exposure (either directly or indirectly) principally to UK equities and convertible bonds. UK equities are equities of companies the majority of which will either be domiciled in the UK, or which derive a significant proportion of their income from the UK. Such investments will be across the market capitalisation spectrum, with the majority of these being companies included in the FTSE 100 and FTSE 250 indices. Up to 15 per cent of the funds NAV may be exposed to non-UK equities and convertible bonds. More than 35% in value of the property of the fund may consist of Government and other public securities issued by one issuer in accordance with the investment management and borrowing powers of the Company.

The Fund will principally use derivatives to take long and short positions in order to gain exposure to particular companies, industries or sectors. Where the Fund gains exposure through derivatives its physical assets will consist of cash deposits or short term investment grade money market instruments to provide cover for this exposure.

The Fund may also invest in transferable securities, units in collective investment schemes (including those managed or operated by the ACD), warrants, money market instruments and deposits.

Review

The fund delivered a return of +5.64% for the 6 month period ended 31st January 2014.

During the period the UK market made relatively modest progress (+1.09%) albeit that second line stocks (such as those in the Mid 250 Index) made considerably healthier gains. The dominant issue for markets was the announcement, delay and then eventual start of the withdrawal of monetary policy stimulus in the US – the so called 'tapering' by the Federal Reserve. This, alongside concerns over the finances of several emerging market economies, made for a volatile period for stocks globally.

Strong stock specific attribution came from holdings on the long book such as Lloyds Bank, TalkTalk, Vodafone and International Consolidated Airlines whereas detractors included HSBC, Centrica, Tullow Oil and BG Group.

Several consumer goods and industrial company short positions were positive for the fund during the period whilst index hedge positions were broadly neutral.

During the period we added several new holdings on the long book including Aviva, St. James's Place, BTG, Foxtons and Big Yellow Group. We disposed of holdings such as Greene King, Standard Life, William Hill and Rightmove. We added new short positions in some industrial and food retail businesses.

In anticipation of further market volatility the fund ended the period with limited net market exposure.

Outlook

Volatility is the order of the day in equity markets currently, driven by increasing concerns around the outlook for several emerging markets in an environment where the US continues to reduce monetary policy stimulus. To a degree this is not unexpected given the gains of recent months and general investor bullishness at the turn of the year. Whilst volatility may persist for a period, we remain positive on the outlook for UK equities medium term anticipating an improving earnings environment, increasing levels of corporate activity, further enthusiasm for equities as an asset class all against a back drop of still reasonable equity market valuations.

Investment Adviser's Report For the period ended 31 January 2014 (continued)

Risk Warning

Please remember that past performance is not a guide to future performance. The price of shares and the income from them may go down as well as up. You may not get back the amount you invest. The Fund may not be suitable for everyone and if in doubt you should seek advice from your financial adviser.

Note:

External sources of underlying economic data used by Old Mutual Global Investors include MSCI, Datastream and FactSet. Market performance data is sourced from Datastream. The quoted index or stock return is based on the price movement between the market close on 5 August 2013 and the close on 31 January 2014. Returns quoted are sterling or local currency returns as specified.

12 March 2014 Old Mutual Global Investors

Net Asset Value per Share and Comparative Tables

The fund was launched on 5 August 2013. Accumulation shares in class A and in class R were issued on that date.

Fund size

Date	Net asset value £	Net asset value per share (pence)	Equivalent number of shares in issue
31 January 2014 Class A Acc	34,628,897	124.12	27,900,465
31 January 2014 Class R Acc	4,571,979	125.82	3,633,794

Stamp Duty Reserve Tax

The SDRT regime, applicable to the scheme is explained on page 46.

Ongoing Charges Fee (OCF)

	As at 31 January 2014
Share Class A	1.67
Share Class R	0.92

The OCF takes into account the ACD fee and all other operating expenses over the relevant financial period.

Investment Objectives, Policy and Strategy

To provide capital growth from investing primarily in a portfolio of UK smaller companies.

Smaller companies are defined for this purpose as those companies which are quoted on a regulated market and which have market capitalisations no greater than the largest company in the Hoare Govett Smaller Companies Index at the time of the initial investment. Typically, the ACD will invest at least 80% of the portfolio in smaller companies. Liquidity will under normal circumstances not exceed 10% of the value of the holding of the Fund.

Subject to the regulations, the property of the fund may include transferable securities; units in collective investment schemes (including those managed or operated by the ACD or an associate of the ACD), warrants, money market instruments, deposits and derivatives.

The Fund will initially use derivatives for hedging purposes. The Fund may use derivatives for purposes other than hedging, provided it has given shareholders 60 days notice of such change. If the Fund does use derivatives for investment purposes, the net asset value of the Fund would at times, be more volatile and the risk profile of the Fund might change.

The UK Smaller Companies Fund is an actively managed Fund focusing predominately on the bottom 10% of the UK market by capitalisation and aiming to achieve long term capital growth.

The Fund aims to produce first quartile performance against the IMA UK Smaller Companies peer group on a rolling twelve month basis.

Review

Markets performed well in the six months to 31 January 2014. The global economy continued its gradual recovery and of all the major markets, the UK arguably delivered the greatest positive surprise. Central bankers in both the US and the UK sought to reassure investors that they would seek to ensure that recovery was assured before raising interest rates.

Against this backdrop, UK smaller companies once again outperformed larger ones. The Numis Smaller Companies Index (ex Investment Trusts) rose by 13.5%. The fund enjoyed a solid absolute gain, but trailed the benchmark, and it placed in the fourth quartile of its peer group for the period. At the sector level, the fund's overweight to software weighed on performance, while underweights to aerospace & defence, chemicals and mining all added value, as did an overweight to construction & materials. At the stock level, holdings in Clinigen, Utilitywise, Telecom Plus and UTV Media all performed well, while holdings in lofina and Dialight underperformed, and not holding Ocado, which performed well during the review period, also detracted from relative performance.

The IPO market saw a welcome return in 2013, and the manager participated by buying new units in estate agency Foxtons, Abu Dhabi healthcare operator AI Noor Hospitals and debt-management company Arrow Global. The manager selectively sought opportunities further down the market capitalisation spectrum, adding positions in stocks such as Dotdigital, Redcentric and Servelec, reflecting his expectation of an enduringly positive shift in investor risk appetite. The overall effect of the review period's activity has been to introduce a little more cyclicality and risk into the portfolio via purchases in areas such as construction while the fund's exposure to 'smaller' smaller caps has been augmented. Against this, the fund's exposure to defensive areas and expensive structural growth was reduced. The manager sold out of the non-life insurance sector, while holdings in Perform Group, Oxford Instruments and Renishaw were disposed of.

Outlook

In the current environment investors will focus even more than usual on the economic data and the nuances of public statements by central bankers. Historically the transition from policy accommodation to policy tightening has led to volatile equity markets. The exceptional nature of the monetary response to the financial crisis and its potential withdrawal adds an additional element of uncertainty. Therefore it seems likely that ultimately any monetary policy tightening will be done at a measured pace to ensure that the hard won recovery is not threatened. UK equities are reasonably priced and the manager expects company profits to move forward with the economy. Against this background, the manager believes that the market can make progress this year.

Risk Warning

Please remember that past performance is not a guide to future performance. The price of shares and the income from them may go down as well as up. You may not get back the amount you invest. The Fund may not be suitable for everyone and if in doubt you should seek advice from your financial adviser.

Note:

External sources of underlying economic data used by Old Mutual Global Investors include MSCI, Datastream and FactSet. Market performance data is sourced from Datastream. Each quoted index or stock return is based on the price movement between the market close on 31 July 2009 and the close on 31 January 2014. Returns quoted are sterling or local currency returns as specified.

Net Asset Value per Share and Comparative Tables

The fund was launched on 29 January 2001. Accumulation units were first issued on that date at 50p per unit. Income units were first issued on 6 January 2003. On 19 September 2007, the fund was converted to a sub fund of an Open Ended Investment Company, Old Mutual Investment Funds Series I. On 12 September 2012 and 23 January 2013 class R income and class P income shares were launched respectively.

Notes to the Financial Statements

1. Accounting Policies

Basis of accounting

The Financial Statements have been prepared under the historical cost convention, as modified by the revaluation of investments, in compliance with the Financial Service Authority's Collective Investment Schemes Sourcebook. They have been prepared in accordance with applicable accounting standards and in accordance with the Statement of Recommended Practice (SORP) for Financial Statements of Authorised Funds issued by the IMA in October 2010.

Revenue

Dividends on equities and distributions on unit trust holdings are recognised when the relevant securities are quoted ex-dividend or exdistribution. Interest, underwriting commission and other income are accounted for on an accruals basis and the rules for Effective Interest Rate (EIR) accounting as outlined in the SORP.

Special dividends

Special dividends are treated as repayments of capital or income depending on the circumstances surrounding the dividend. Where special dividends are taken to capital they are disclosed as realised gains on investments during the period.

Scrip dividends

The ordinary element of stocks received in lieu of cash are recognised as income. Any enhancement above the cash dividend is taken to capital and disclosed as realised gains on investments.

Management expenses

Management expenses are accounted for on an accruals basis.

Distributions

Amounts distributable are calculated after charging all of the ACD's periodic charge and all other expenses except those of a capital nature. Interest distributions will be made on an Effective Interest Rate (EIR) basis.

Basis of valuation of investments

The valuation point is 12.00 noon on the last business day of the accounting period. Quoted investments are valued at the market bid price net of any accrued interest which is included in the balance sheet as an income-related item.

Foreign currencies

Assets and liabilities have been translated into sterling at the mid-market exchange rates prevailing at the balance sheet date. Transactions in foreign currencies are translated at the exchange rate prevailing at the transaction date. Where forward positions in currencies are held, these are translated at the appropriate forward rate. Any resulting exchange differences are disclosed as currency gains/(losses) in the Statement of Total Return.

Deferred tax

Deferred tax is provided for on a full liability basis for all timing differences. Deferred tax assets are only recognised to the extent that it can be regarded as more likely than not that there will be sufficient suitable taxable profits from which the future reversal of the underlying timing differences can be deducted.

Forward foreign exchange contracts

Forward foreign exchange contracts are used in order to hedge against currency exchange rate movements on underlying investments in overseas bonds. The difference between the forward and spot and movement in the spot rate are taken to the capital account.

Taxation

Corporation tax is charged at 20% of the income liable to Corporation tax less expenses.

Shares

Where a fund has more than one share class, each class may incur different expenses. Consequently the level of net revenue available to each share class may differ.

Allocation of Revenue and Expenses to Multiple Share Classes

With the exception of the annual management charge, which is directly attributable to individual Share Classes, all revenue and expenses are allocated to Share Classes pro rata to the value of the new assets of the relevant Share Class on the day the revenue or expense is recognised.

Individual Savings Accounts

From 6 April 1999, each fund has been managed so as to ensure that it is a qualifying investment for the stocks and shares component of an Individual Savings Account, within the Individual Savings Account ('ISA') Regulations 1999.

Stamp Duty Reserve Tax (SDRT)

What is SDRT?

SDRT is a tax charge levied by HM Revenue & Customs on the disposal or switching of shares in an OEIC. The tax is charged when shares are sold back to the ACD (Authorised Corporate Director), or when there is a non-exempt transfer of an investment. SDRT is charged at the maximum rate of 0.5% on eligible investments (although this figure may be reduced depending on the investments in and number of issues and surrenders applicable to the fund). If applicable, SDRT is paid to HM Revenue & Customs on the 14th of the month following the monthly charging period.

When is SDRT charged?

SDRT will be charged to redemptions of shares where the transaction is 2% or greater of the value of the fund as at the date of the transaction. The charge will be at a rate appropriate to the fund concerned, by reference to the proportion of exempt and non-exempt assets used in the calculation for the previous month.

ACD's policy on charging SDRT

Except for SDRT on larger deals and on non-exempt transfers between third parties OMFM intends that any liability to SDRT will be borne by the fund concerned.

For further information on the application of SDRT please refer to the full prospectus which is available on request from the ACD.

Capital Gains Tax

Capital gains within the fund are not liable to tax. You may be liable to capital gains tax when you sell some of your shares if the total gains in the relevant tax year exceed the annual exemption. For the tax year 2012/2013, the first £10,900 is exempt. This is the personal allowance for all your investments. If you have any queries regarding your tax position, you should contact your financial adviser.

Fund Launch

The UK Opportunities Fund was launched on 5 August 2013. Accumulation shares in class A and in class R were issued on that date.
