General information

Company profile

Independent and owner-managed, Artemis opened for business in 1997. Its aim was outstanding investment performance and client service. All Artemis' fund managers still share these two precepts – and the same flair and enthusiasm for fund management.

The company has grown to the extent that it now manages an asset base of some £17.8 billion*. This is spread across a range of unit trusts, an investment trust, a hedge fund, a venture capital trust and both pooled and segregated institutional portfolios.

The Artemis philosophy requires our fund managers to invest in Artemis funds. This means that our fund managers' interests are directly aligned with our investors.

* Source: Artemis as at 28 February 2014.

Fund status

Artemis Global Income Fund was constituted by a Trust Deed dated 1 June 2010 and is an authorised unit trust scheme under the Financial Services and Markets Act 2000. The fund belongs to the category of UCITS schemes as defined in the Collective Investment Schemes Sourcebook of the Financial Conduct Authority.

Investment objective

The objective of the fund is to achieve a rising income combined with capital growth primarily from a portfolio of equities selected on a global basis.

Investment policy

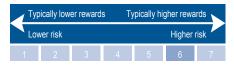

The manager actively manages the portfolio in order to achieve the objective with exposures to company shares, fixed interest securities and derivative instruments as appropriate. The manager will not be restricted in respect of choice of investments either by company size or industry, or in terms of the geographical split of the portfolio.

The fund may also invest in other asset classes eligible for a UCITS scheme to invest in including other transferable securities, units of collective investment schemes, money market instruments, cash and near cash, derivatives and forward transactions for investment purposes.

Buying and selling

Units may be bought and sold by contacting the manager by telephone, at the address on page 2 or via the website **artemis.co.uk**. Valuation of the fund takes place each business day at 12 noon on a forward pricing basis. Investors are reminded that past performance is not a guarantee of performance in the future and that the price of units and the revenue from them can fall as well as rise.

Risk and reward profile

- This indicator is based on historical data and may not be a reliable indication of the future risk profile of the fund.
- The risk category shown is not guaranteed and may change over time.
- A risk indicator of "1" does not mean that the investment is "risk free".
- The indicator is not a measure of the possibility of losing your investment.

The risk indicator for the fund is as above because:

- The price of units, and the income from them, can fall and rise because of stockmarket and currency movements.
- Stockmarket prices, currencies and interest rates can move irrationally and can be affected unpredictably by diverse factors, including political and economic events.
- A portion of the fund's assets may be invested in a currency other than the fund's accounting currency

(sterling). The value of these assets, and the income from them, may decrease if the currency falls in relation to sterling, in which the fund is valued and priced.

- A portion of the fund's assets may be invested in new, emerging markets. Investment in emerging markets can involve greater risk than that usually associated with more established markets. This means that aboveaverage rises and falls in unit prices can be expected.
- Investments in fixed interest securities are subject to market and credit risk and will be impacted by movements in interest rates. Interest rate movements are determined by a number of economic factors, in particular market expectations of future inflation.
- The fund can invest in higheryielding bonds, which may increase the risk to your capital due to a higher likelihood of the company issuing the bonds failing to pay returns on investments. Changes to market conditions and interest rates can have a larger effect on the values of higheryielding bonds than other bonds.

Prospectus

Copies of the most recent Prospectus are available free of charge from the manager at the address on page 2.

Report of the manager

This report has been prepared in accordance with the requirements of the Collective Investment Schemes Sourcebook as issued and amended by the Financial Conduct Authority.

R J Turpin Director

17 March 2014

M R J Tyndall Director

Investment review

- The fund rises 3.8%* versus a fall of 2.1%* in its benchmark, maintaining its longer-term record.
- European mid-caps contributed strongly.
- We are cautiously optimistic on the outlook for equity markets.

Performance – Good returns and dividends ...

The fund marked its three-year anniversary in July 2013, just before the start of this reporting period. We would like to thank investors for entrusting us with their money over that time. Since the fund's launch in July 2010, our unitholders' faith has been rewarded by a total return of 66.2%*. That compares with a return of 42.8%* from its peer group. That strong performance continued into the reporting period. The fund was up 3.8%* over the six months to the end of January, compared to a fall of 2.1%* in its benchmark, the MSCI AC World Index and a fall of 2.7%* in the sector average.

While the returns the fund has produced to date have been pleasing, total returns are not something we can guarantee going forward; at least in the short-term, we have little control over capital returns. One area where we do have more control is in dividends, which we collect from the companies in which we invest and distribute to our investors. So, even more than the fund's strong total return since launch, we are pleased that we have been able to deliver a consistently high and growing dividend (represented by a yield of between 4% and 5%). Given the recent strength of sterling, however, we would like to alert unitholders to the possibility that a similar dividend payout will be harder to achieve this year. Although the dividends we receive are growing in local currency terms, this is being offset by a stronger pound. In the medium-term, we are confident we can grow the fund's dividend as we

have done since inception. But we suspect this year might be a tough one, and that short-term dividend growth will, at best, be flat.

Review – A number of factors combine ...

What has driven the fund's strong performance over the last six months? Its longstanding exposure to European stocks, and particularly to mid-caps, was one factor. Domestic demand is picking up and companies that are facing European consumers (who appear to be back from the dead) saw strong business trends. Germany looks fine. Economic growth is healthy, debt is low and the country's industrial sector is competitive despite the strong euro. There is virtually full employment. One of the beneficiaries of this economic vigour is our holding in German media group RTL Group. It has returned 29% over the last six months and is a good play on consumer and advertising trends in Europe as RTL runs 54 TV stations and 29 radio stations in 10 European countries. They also own companies that have developed TV formats such as Big Brother and The Voice. The company has given clear guidance on its dividend policy. It will pay out 50-70% of the free cash flow that it generates as an ordinary dividend. Any remaining excess cash will be used either to fund acquisitions or to pay special dividends.

There are also slightly more positive noises from the wider eurozone. In Spain, for example, real estate prices are no longer falling in Madrid, Barcelona and some coastal regions (although admittedly things remain dire in other parts of the country). We have exposure to a recovery in Madrid's housing market via a holding in Bankinter, a well-managed private bank focused on affluent urbanites and well-capitalized SMEs.

But rather than country positioning, sector bets or risk taking, it tended to

be stock picking that drove returns. Highlights of the last six months have included CTT Correios de Portugal, the privatised Portuguese postal system, which rose by 16%. Irish sandwich-maker Greencore Group (you might not know its name, but you will have eaten its food) was up 71%. We also made good money by subscribing to an IPO by BW LPG. This Norway-based mid cap is a world leader in the very large gas carrier vessels (VLGCs) that transport liquid petroleum gas (LPG) around the world. Basically, it ships cheap US shale gas to energy-hungry Asian nations where these derivative gases are being bottled and used for cooking purposes among other things. It owns and operates 36 of these vessels and is building five more. The arbitrage opportunity (prices in the US are so much lower than selling prices in Asia) means that there is strong demand, which in turn is pushing up shipping rates to record levels. BW LPG has a good business model, is making strong mid-teen returns on equity and is seeing double-digit top-line organic growth. It also pays a decent dividend yield.

While stock selection was the main driver of returns, the fund was also rewarded for being underweight in emerging markets. The fundamental problem is that growth in these economies has been far more creditled than the market had realised. The 'story' – the emergence of vast new middle classes - was so compelling that it overshadowed the structural problems that countries such as Indonesia, Turkey and Brazil still face. It is becoming increasingly clear that the rapid growth and asset revaluations in these economies depended, in part, on quantitative easing (QE) in the West. Artifically low interest rates have created "free money" which in turn has flowed to emerging markets where the returns tend to be higher.

But, this has created a false cost of capital and has often led to risky

^{*} Source: Lipper Limited, R distribution, bid to bid basis, in sterling with net income reinvested. Benchmark is the MSCI AC World Index. Sector is IMA Global Equity Income.

Investment review (continued)

capital allocations. As the Federal Reserve 'tapers' (progressively reduces the size of its monthly bond-buying program), that process is going into reverse. Hence we are worried about what continued interest rate normalisations in the developed economies can do to the cost of capital – and returns on capital – in emerging markets.

We moved away from consumerfacing stocks in emerging markets back in 2012, selling our preferred holding, Tiger Brands (the 'Unilever of South Africa'), when its p/e hit 20x. We felt that was too rich for an emerging market stock that must pay for its raw materials in US dollars, particularly given the pressures on the South African rand. In sterling terms, its share price fell by 40% in 2013. Today, emerging markets are cheap and widely disliked. Could they, then, be a contrarian 'buy'? We don't think so - not just yet. We don't think the taper-driven unwind in emerging markets is over. The fund remains underweight here but we are monitoring this position daily.

Another contributor to the fund's strong performance was its significant underweight in what we call 'expensive defensives'. For example, Unilever unveiled a surprising profit warning on the back of weaker demand from emerging market consumers and the impact of the recent collapse in some emerging market currencies. This put all consumer staples stocks, which tend to trade at rather stretched multiples, under pressure. We have had very limited exposure to consumer staples for two years. With less than 5% in consumer staples, and nothing whatsoever in Nestlé, Unilever, British American Tobacco, Imperial Tobacco (or any of the US food companies or Asian beverage makers), we have made a clear decision: these stocks are just too expensive for us.

Although the fund outperformed the benchmark in every month of the period, there were – perhaps inevitably – some negatives. Cisco Systems, for example, fell by 20% due to the NSA spying scandal.

Some countries have stopped buying networking equipment from Cisco due to a combination of security fears and worries about a political backlash.

In terms of activity, the IPO market was very active as companies took advantage of elevated equity market levels. In addition to BW LPG, we participated in the float of Merlin Entertainments, which operates a global network of theme parks that includes Legoland, SeaWorld and Madame Tussauds. We took profits in a number of more cyclical and emerging market stocks such as Banco do Brasil, Compagnie de Saint-Gobain (a French building materials manufacturer) and Semen Gresik, an Indonesian cement producer.

In general, the portfolio has been overweight Europe (where stocks are still relatively cheap and the outlook is improving), underweight emerging markets and underweight the US (where the economy is good but equities are expensive and up with events).

Outlook – The issue is earnings …

Our central expectation is that markets most likely won't be as calm in the near future as they were in 2013, when QE drove the price of almost all assets (equities, antiques, sports memorabilia, houses, and even stamps) higher. While interest rates are still very low by historic standards, a marginally stronger economy could lead to tighter monetary policy globally.

In the fund's monthly factsheet for March 2013, we predicted that, "apart from Japan, we won't be seeing a great deal more additional easing. And we just don't know how independent the growth in Asia and the US is from liquidity and leverage. So from an investment point of view, we have to be careful not to over interpret the recently positive figures for economic growth. We also have to be careful not to extrapolate too far into the future. It could all be short-lived if monetary stimulus is withdrawn. There are no signs of that. But we take note that

this recovery is not 'normal'."

We stand by that view today, almost a year later. The volatility seen in May and June 2013 - when Ben Bernanke started talking about tapering QE and triggered panicked selling of investments whose performance tends to be driven by record low rates. There was similar volatility in December 2013 and January 2014, when the Fed actually started tapering, lowering its monthly bond buying by \$10 billion. This supports our view that easy money can lead to inefficient capital allocation, and its withdrawal can have unexpected side-effects.

For most of 2013 – including the period under review - any dips in the market were bought rather than sold. Equity markets were often only down for a day or two, and then only by a few percent, before investors stepped in and drove indices to new highs. Those gains were, to a greater degree than in any previous business cycle we can remember, driven by a re-rating of equities rather than by earnings growth. Or, to put it in price-to-earnings terms, the 'p' (the price) climbed, but the 'e' (earnings) did not keep pace. The question then becomes whether equities can become even more expensive - can the p/e multiple go even higher? Absolutely. Valuations could easily rise from current levels. In most cycles, equities tend to become outright expensive before they retreat meaningfully.

That said, a higher p/e multiple indicates that investors are willing to pay more for future earnings. This carries risks. If the earnings growth that investors currently expect doesn't materialise, they will be disappointed. Given that, it will be important that global equities deliver the growth in earnings that investors are expecting. We are aware of the risk that these expectations prove too high and hence tend not to buy expensive stocks that are dependent on hitting elevated growth expectations.

Since inception, the fund has had a distinct value tilt, which is to say

that we have focused on stocks that are unloved and therefore cheap. We don't like owning stocks that are too expensive. Today, our portfolio trades on an average p/e multiple of 12.5x against a global benchmark on 15.0x. This value tilt, we believe, gives us a small safety cushion should earnings disappoint.

While we are concerned that markets could wobble as policy normalises (i.e. rates go higher and central banks stop over-stimulating), we don't exclude the possibility that equities could have a decent year in 2014. But it won't be like 2013, when almost everything went up in a straight(ish) line. If a meltdown in emerging markets can be avoided (and that is a big 'if'), the medium-term economic outlook for the global economy is actually OK. There is a decent probability that we will see global corporate earnings picking up in the second half of this year, the capex outlook is improving (as companies finally start investing again, rather than hoarding cash or paying dividends) and the M&A cycle is supporting equity valuations.

Usually, equity markets are expensive at the point where the economy improves and the earnings cycle kicks in. Currently, however, equities are not very expensive, but closer to fair value. Whatever the markets' outcome this year, we believe that our focus on stock selection, our value bias and ongoing hunt for diversified sources of growing dividend will continue to reward patient investors.

Notes to the financial statements

1. Basis of preparation

The interim financial statements have been prepared in accordance with the Statement of Recommended Practice for Authorised Funds issued by the Investment Management Association in October 2010.

The accounting policies applied are consistent with those of the annual financial statements for the year ended 31 July 2013, as set out therein.

2. Post balance sheet events

Since 31 January 2014, the net asset values per unit, on a bid basis, have changed as follows:

	Net asset valu	Net asset value per unit (p)		
	14 March 2014	31 January 2014	Movement	
R distribution	70.29	67.77	3.7%	
R accumulation	81.91	78.98	3.7%	
I distribution	72.23	69.58	3.8%	
I accumulation	84.14	81.08	3.8%	

ARTEMIS Global Income Fund

Half-Yearly Report (unaudited)

Distribution table

Interim dividend distribution for the six months ended 31 January 2014.

Group 1 – Units purchased prior to 1 August 2013.

Group 2 – Units purchased from 1 August 2013 to 31 January 2014.

	Net revenue per unit (p)	Equalisation per unit (p)	Distribution per unit (p) 31 March 2014	Distribution per unit (p) 28 March 2013
R distribution				
Group 1	0.8737	-	0.8737	0.8685
Group 2	0.3742	0.4995	0.8737	0.8685
R accumulation				
Group 1	1.0053	-	1.0053	0.9557
Group 2	0.3851	0.6202	1.0053	0.9557
I distribution				
Group 1	0.8951	-	0.8951	0.8906
Group 2	0.3121	0.5830	0.8951	0.8906
I accumulation				
Group 1	1.0296	-	1.0296	0.9725
Group 2	0.2376	0.7920	1.0296	0.9725

Corporate unitholders should note that:

Equalisation applies only to units purchased during the distribution period (group 2 units). It is the average amount of revenue included in the purchase price of group 2 units and is refunded to the holders of these units as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of units for capital gains tax purposes.

^{1. 100.00%} of the revenue distribution together with the tax credit is received as franked investment income.

^{2. 0.00%} of the revenue distribution is received as an annual payment received after deduction of income tax at the lower rate and may be liable to corporation tax. It is not franked investment income.
