15	Invesco Perpetual European Opportunities Fund

Further information

This Short Report, which is unaudited, has been prepared in accordance with the Financial Services (Open-Ended Investment Companies) Regulations 2001. The Authorised Corporate Director's Long Form Financial Statements and the Prospectus, which contains a written statement of the Terms and Conditions of the Company, can be obtained using the contact details shown on the back cover.

Launch of new 'Z' share classes on 12 November 2012

New 'Z' share classes, accumulation shares and income shares, were launched at 200p per share for the Invesco Perpetual European Equity Fund, Invesco Perpetual European Equity Income Fund and Invesco Perpetual European Opportunities Fund.

Further details can be obtained from the most up to date relevant fund and share class specific Key Investor Information Document(s).

Investment objective

The fund aims to achieve capital growth in Continental Europe. The fund intends to invest primarily in shares in companies in Continental Europe, although it may include other European related investments. In pursuing this objective, the fund managers may include investments that they consider appropriate which include transferable securities, money market instruments, warrants, collective investment schemes, deposits and other permitted investments and transactions as detailed in Appendix 2 of the most recent Full Prospectus.

Risk profile

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Over time, inflation may erode the value of investments. The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments. reduce the costs of investing or generate additional capital or income, although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund. Although the fund invests mainly in established markets, it can invest in emerging and developing markets, where there is potential for a decrease in market liquidity, which may mean that it is not easy to buy or sell securities, as well as operational difficulties. The fund's performance may be adversely affected by variations in the relative strength of world currencies or if Sterling strengthens against those currencies.

Strategy, review and outlook

The fund rose by 19.6% for the six months to the end of April 2013, compared to a gain of 19.4% from the benchmark FTSE World Europe (ex UK) Index. This placed the fund in the first quartile of its peer group,

the IMA Europe (ex UK) Sector, which rose by an average of 17.7%.

Fund and sector average performance data source: Lipper, mid-to-mid (excluding the entry charge), in Sterling, with net income reinvested. FTSE World Europe (ex UK) Index data source: Thomson Reuters Datastream, total return, in Sterling.

Past performance is not a guide to future returns.

Since Mario Draghi said he would "do whatever it takes" to save the Euro in his now infamous speech from last summer, equity markets have enjoyed a strong rally. This promise, along with some meaningful reforms within the labour market for example, has underpinned equity markets. Upward progress was briefly punctured by the Italian election stalemate (February) and the poor handling of the Cypriot bailout (March), which negatively impacted peripheral markets and financial holdings temporarily, although positive momentum was swiftly restored by the end of the period under review.

Key areas of outperformance, relative to the benchmark, came from selected financials, health care and industrial names. Ageas, Bankinter, BBVA and Intrum Justitia (financials), Swiss pharmaceutical holdings Roche and Novartis, and industrial names EADS, Safran and OHL all added to relative fund performance during the period. Weakest relative performance came from our holding of Post NL whose share price fell sharply in January after UPS scrapped its proposed €5.16bn takeover of TNT.

Portfolio activity during the period included new positions initiated in French financial firm Axa, Spanish IT company Indra Sistemas along with Germany-based companies Deutsche Post and Siemens. Meanwhile, amongst holdings sold during the period included Aeroports de Paris, Italian bank Intesa as well as German firms Bayer and food retailer Metro.

Looking ahead, we see more gentle headwinds for European GDP this year compared to 2012. These include loose monetary policy from global central banks. while macroeconomic data such as Organisation for Economic Co-operation and Development (OECD) leading indicators show signs of bottoming. Monetary policy is very accommodative while the pace of austerity implementation is also being ratcheted back a notch. Against this less negative macro-economic environment in Europe and better growth prospects in the rest of the world, European companies should fare better. The rate of earnings downgrades is already starting to slow, which is normally an encouraging sign for the future.

As far as positioning is concerned, we remain exposed to many financial companies where the emphasis is on well capitalised names with robust business models, cyclical stocks (those stocks more

exposed to the economic cycle) and peripheral countries where our focus is primarily on large cap stocks – often international in nature – which we believe have been disproportionately hit by having the wrong passport, i.e. being guoted in Madrid, Milan or Lisbon rather than in a financial centre further north. The one key area we really do not wish to be exposed to is the consumer staples sector. Here our view is that the valuations have become far too stretched and the downside risk to earnings too great. We note that the sector has underperformed the wider market recently with many names in the sector reporting disappointing earnings.

Jeffrey Taylor, Fund Manager

Investment objective

The fund aims to generate a rising level of income, together with long-term capital growth investing primarily into European equities, excluding the United Kingdom. In pursuing this objective, the fund managers may include investments that they consider appropriate which include transferable securities, money market instruments, warrants, collective investment schemes, deposits and other permitted investments and transactions as detailed in Appendix 2 of the most recent Full Prospectus.

Risk profile

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Over time, inflation may erode the value of investments. The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments. reduce the costs of investing or generate additional capital or income, although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund. As one of the key objectives of the fund is to provide income, the annual management charge is taken from capital rather than income. This can erode capital and reduce the potential for capital growth. Although the fund invests mainly in established markets, it can invest in emerging and developing markets, where there is potential for a decrease in market liquidity, which may mean that it is not easy to buy or sell securities, as well as operational difficulties. The fund's performance may be adversely affected by variations in the relative strength of world currencies or if Sterling strengthens against those currencies.

Strategy, review and outlook

The fund rose by 21.8% for the six months to the end of April 2013, compared to a gain of 19.4% from the benchmark FTSE World Europe (ex UK) Index. This placed the fund in the first quartile of its peer group, the IMA Europe (ex UK) Sector, which rose by an average of 17.7%.

Fund and sector average performance data source: Lipper, mid-to-mid (excluding the entry charge), in Sterling, with net income reinvested. FTSE World Europe (ex UK) Index data source: Thomson Reuters Datastream, total return, in Sterling.

Past performance is not a guide to future returns.

Since Mario Draghi said he would "do whatever it takes" to save the Euro in his now infamous speech from last summer. equity markets have enjoyed a strong rally. With European markets at depressed levels in terms of valuation and ownership, the European Central Bank's promise led to a marked positive reaction. Upward progress was briefly punctured by the Italian election stalemate (February) and the poor handling of the Cypriot bailout (March), which negatively impacted peripheral markets and financial holdings temporarily, although it was noticeable that the sovereign bond markets in the periphery remained robust throughout the period.

Positive fund performance in both absolute and relative terms was driven primarily by our large exposure to the financial sector. More specifically, Belgian firm Ageas and Italian name Fondiaria-Sai were standout performers among insurers, while banking names Bankinter, BBVA and UBS all added to relative outperformance when compared to the benchmark. Other notable strength came from industrials positions in OHL (motorway/concessions business in Spain),

EADS (aerospace & defence), Randstad and DCC (support services), while our large holdings in Swiss pharmaceutical firms Roche and Novartis were also beneficial to relative returns. Weakest performance came from our holding of Post NL whose share price fell sharply in January after UPS scrapped its proposed €5.16bn takeover of TNT.

In portfolio activity terms, changes made during the period have reflected our view that there are significant opportunities within financials and selected peripheral areas. In more detail, our financial weighting has been increased with new positions in Axa, Zurich Insurance Group, Credit Suisse, Bankinter and Societe Generale while our Spanish country weighting has also been increased, post a research trip to the country in December.

Looking ahead, we fully acknowledge that the macroeconomic backdrop is relatively subdued. However, in an environment where key policy makers have recently shifted their stance away from strict austerity in favour of pro-growth policies, allied to continued loose monetary policy from central banks globally, we believe that

there are more gentle headwinds facing European GDP compared to 2012. Crucially, valuations in Europe remain attractive at current levels, in our view. even more so when one considers that European company earnings are still around 50% below their peak of five years ago. Areas of focus for the fund include the financial sector, where we believe dividend growth will be an important theme in a number of cases, alongside selected holdings within support services, telecoms and media sectors where good sustainable dividend vields are available at attractive valuations, in our opinion, Conversely, in our view valuations are stretched in the consumer staples sector, where earnings revisions have turned negative. We believe the pharmaceutical sector offers similar cashflow and business characteristics with more attractive valuations.

Stephanie Butcher, Fund Manager Where Stephanie Butcher has expressed opinions, they are based on current market conditions and are subject to change without notice. These opinions may differ from those of other Invesco Perpetual investment professionals.

Investment objective

The fund aims to achieve capital growth through a portfolio of investments primarily in European companies, excluding the United Kingdom. In pursuing this objective, the fund managers may include investments that they consider appropriate which include transferable securities, money market instruments, warrants, collective investment schemes, deposits and other permitted investments and transactions as detailed in Appendix 2 of the most recent Full Prospectus.

Risk profile

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Over time, inflation may erode the value of investments. The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments. reduce the costs of investing or generate additional capital or income, although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund. Although the fund invests mainly in established markets, it can invest in emerging and developing markets. where there is potential for a decrease in market liquidity, which may mean that it is not easy to buy or sell securities, as well as operational difficulties. The fund's performance may be adversely affected by variations in the relative strength of world currencies or if Sterling strengthens against those currencies.

Strategy, review and outlook

The fund rose by 20.3% for the six months to the end of April 2013, compared to a gain of 19.4% from the benchmark FTSE World Europe (ex UK) Index. This placed the fund in the first quartile of its peer group, the IMA Europe (ex UK) Sector, which rose by an average of 17.7%.

Fund and sector average performance data source: Lipper, mid-to-mid (excluding the entry charge), in Sterling, with net income reinvested. FTSE World Europe (ex UK) Index data source: Thomson Reuters Datastream, total return, in Sterling.

Past performance is not a guide to future returns.

Since Mario Draghi said he would "do whatever it takes" to save the Euro in his now infamous speech from last summer, equity markets have enjoyed a strong rally. This promise, along with some meaningful reforms within the labour market for example, has underpinned equity markets. Upward progress was briefly punctured by the Italian election stalemate (February) and the poor handling of the Cypriot bailout (March), which negatively impacted peripheral markets and financial holdings temporarily, although positive momentum was swiftly restored by the end of the period under review.

Areas which enhanced relative performance compared to the benchmark over the period included our large exposure to the financials and oil & gas sector. Italian holding Fondiaria-Sai along with Belgian name Ageas were standout performers within the insurance sector while Banca Generali, UBS and Bankinter proved strongest within our banking exposure. Norwegian firms Awilco Drilling and Spectrum, along with Total Gabon were key positives within the oil & gas sector. Elsewhere there was strong performance from French carmaker Renault, Swiss watchmaker Swatch and airlines Lufthansa and Air France. Conversely there was relative weakness from Norwegian fertiliser start up holding Agrinos.

In terms of fund activity, after a good period of performance we have reduced our weighting in the oil & gas sector quite significantly and trimmed our

financial sector exposure. Elsewhere we have increased our exposure to the industrials sector.

Compared to last year, we see more gentle headwinds for European GDP this year. These include loose monetary policy from global central banks, while macroeconomic data such as Organisation for Economic Co-operation and Development (OECD) leading indicators show signs of bottoming. Monetary policy is very accommodative while austerity implementation is also being scaled back somewhat. Against this less negative macro-economic environment in Europe and better growth prospects in the rest of the world. European companies should fare better. The rate of earnings downgrades is already starting to slow, which is normally an encouraging sign for the future.

Given this backdrop, we remain focused on finding companies which we believe can do well in a low-growth environment. This can include companies with strong growth in returns on capital employed or restructuring stories. Furthermore we are looking for cash generative companies with shareholder friendly management, while central to all of this is valuation. In our opinion, the attractive valuations being offered at current levels underestimate the ability of European companies to deliver healthy returns to shareholders over the longer term.
