### Fund objectives and investment policy

The fund aims to provide capital growth by investing in the equities of companies worldwide which are considered to be undervalued relative to their long term earnings potential.

The fund is actively managed and invests at least 80% of its assets in equities of companies worldwide that have suffered a set back in either share price or profitability, but where long term prospects are believed to be good. The fund applies a disciplined value investment approach, seeking to invest in a select portfolio of companies that the Investment Manager believes are significantly undervalued relative to their long-term earnings potential. The fund may also invest directly or indirectly in other securities (including in other asset classes), countries, regions, industries or currencies, collective investment schemes (including Schroder funds), warrants and money market instruments, and hold cash. The fund may use derivative instruments for investment purposes as well as for efficient portfolio management.

Relevant risk as associated with this Fund are shown overleaf and should be carefully considered before making any investment.

### Risk considerations

**China country risk** Changes in China's political, legal, economic or tax policies could cause losses or higher costs for the fund.

**Concentration risk** The fund may be concentrated in a limited number of geographical regions, industry sectors, markets and/or individual positions. This may result in large changes in the value of the fund, both up or down, which may adversely impact the performance of the fund.

**Counterparty risk** The counterparty to a derivative or other contractual agreement or synthetic financial product could become unable to honour its commitments to the fund, potentially creating a partial or total loss for the fund.

**Currency risk** The fund can be exposed to different currencies. Changes in foreign exchange rates could create losses.

**Derivatives risk** A derivative may not perform as expected, and may create losses greater than the cost of the derivative.

**Emerging markets & frontier risk** Emerging markets, and especially frontier markets, generally carry greater political, legal, counterparty and operational risk.

**Equity risk** Equity prices fluctuate daily, based on many factors including general, economic, industry or company news.

**Leverage risk** The fund uses derivatives for leverage, which makes it more sensitive to certain market or interest rate movements and may cause above-average volatility and risk of loss.

**Liquidity risk** In difficult market conditions, the fund may not be able to sell a security for full value or at all. This could affect performance and could cause the fund to defer or suspend redemptions of its shares.

**Operational risk** Failures at service providers could lead to disruptions of fund operations or losses.

**Shanghai-Hong Kong Stock Connect and Shenzhen-Hong Kong Stock Connect risk** The fund may be investing in China "A" shares via the Shanghai-Hong Kong Stock Connect and Shenzhen-Hong Kong Stock Connect which may involve clearing and settlement, regulatory, operational and counterparty risks."

### Synthetic risk & reward indicator (SRRI)

#### LOWER RISK

Potentially lower rewards

#### HIGHER RISK

Potentially higher rewards

The risk category was calculated using simulated historical performance data and may not be a reliable indicator of the fund's future risk profile. The fund's risk category is not guaranteed to remain fixed and may change over time. A fund in the lowest category does not mean a risk-free investment. A fund is in categories 1 to 3 where it can take lower risks in search of potentially lower rewards and its price may rise and fall accordingly. A fund is in categories 4 to 7 where it can take higher risks in search of potentially higher rewards and its price may rise and fall accordingly.
