NOVEMBER 2019 FACTSHEET

Unless otherwise stated, Performance, Portfolio Breakdowns and Net Asset information as at: 30-Nov-2019. All other data as at 09-Dec-2019.

For Investors in the UK. Investors should read the Key Investor Information Document and Prospectus prior to investing.

FUND OVERVIEW

The Fund aims to provide a return on your investment (generated through an increase in the value of the assets held by the Fund and/or income received from those assets) by tracking closely the performance of a composite benchmark (i.e. a benchmark comprised of two or more other benchmarks) comprising of the Bank of America Merrill Lynch Sterling Corporate Securities 1-5 Year Index and the Bank of America Merrill Lynch Sterling Corporate Securities 5-10 Year Index, the Fund's benchmark indices. The Fund is passively managed and the investment adviser has discretion to select the Fund's investments and in doing so may take into consideration the Benchmark Index. The Fund invests in fixed income securities (such as bonds) that make up the benchmark indices and, at the time of purchase, comply with the credit rating requirements of the benchmark indices. The benchmark indices measure the performance of Sterling denominated fixed income securities publicly issued by companies in the Eurobond or United Kingdom markets. The fixed income securities will pay income according to a fixed rate of interest and will be investment grade (i.e. meet a specified level of credit worthiness) at the time of inclusion in the benchmark indices. They will have a time to maturity (i.e. the time they become due for repayment) of between 1 and 10 years.

RATINGS

Key Risks: The value of your investment and the income from it will vary and your initial investment amount is not guaranteed. Two main risks related to fixed income investing are interest rate risk and credit risk. Typically, when interest rates rise, there is a corresponding decline in the market value of bonds. Credit risk refers to the possibility that the issuer of the bond will not be able to repay the principal and make interest payments.

(Continued on page 2)

Key Risks Continued: The Fund utilises derivatives as part of its investment strategy. Compared to a fund which only invests in traditional instruments such as stocks and bonds, derivatives are potentially subject to a higher level of risk and volatility. The Fund invests in high yielding bonds. Companies which issue higher yield bonds typically have an increased risk of defaulting on repayments. In the event of default, the value of your investment may reduce. Economic conditions and interest rate levels may also impact significantly the values of high yield bonds. The Fund's investments may have low liquidity, which often causes the value of these investments to be less predictable. In extreme cases the Fund may not be able to realise the investment at the latest market price or at a price considered fair. Some or all of the Manager's annual charge for the Fund is taken from capital rather than from income. This increases the income, but reduces the potential for capital growth.

Negative weightings may result from specific circumstances (including timing differences between trade and settlement dates of securities purchased by the funds) and/or the use of certain financial instruments, including derivatives, which may be used to gain or reduce market exposure and/or risk management. Allocations are subject to change.

GLOSSARY

Effective Duration: A measure of price sensitivity of a bond to changes in interest rates. The Modified Duration of the fund is calculated as the average of the underlying bonds' modified duration values, adjusted to take account of their relative weight (size) within the fund.

Ongoing Charge: is a figure representing all annual charges and other payments taken from the fund.

Quartile Rank: categorises a fund into four equal bands based on their performance over a specified period within the relevant Morningstar's sector. The top or first quartile contains the top 25% of funds, through to the bottom or 4th quartile which contains the bottom 25% of funds.

SRRI: is a value based on the volatility of the fund, which gives an indication of the overall risk and reward profile of the Fund.

Nominal Weighted Average Life (WAL): A bond's maturity is the length of time until the principal amount of the bond is to be repaid. WAL of the fund is calculated as the average of the underlying bonds' maturities, adjusted to take account of their relative weight (size) within the fund.

Yield To Worst: The lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions are used by the issuer.

Performance Fee: is charged on any returns that, subject to a High Water Mark, the Fund achieves above it's performance fee benchmark. Please refer to the Prospectus for further information.
