

GLOBAL DIVIDEND FUND W - ACC SHARES

30 JUNE 2019

Approach and Style

Daniel Roberts uses a bottom-up approach to invest in companies that offer a healthy yield underpinned by a growing level of income, as well as the potential for capital growth. When considering potential investment opportunities, he places a large emphasis on the sustainability of the dividend and whether the current share price provides an adequate margin of safety. The portfolio invests across a variety of sectors and geographies, offering a good level of diversification. Daniel manages risk conservatively, focusing on companies with predictable, consistent cash flows and simple, understandable business models with little or no debt on their balance sheets.

Objectives & Investment Policy

- Aims to provide income and long-term capital growth.
- Invests primarily in shares of companies from around the world. The choice of assets is guided by attractive dividend yields in addition to the potential for capital growth.
- Can use derivatives with the aim of risk or cost reduction or to generate additional capital or income in line with the fund's risk profile.
- The fund has discretion in its choices of investments within its objectives and policies.
- Income is accumulated in the share price.
- The annual management charge may be taken from your capital and not from the income generated by the fund. This means that any capital growth in the fund may be reduced by the charge. Your capital may reduce over time if the fund's growth does not compensate for it.
- Shares can usually be bought and sold each business day of the fund.

Independent Assessment

Information in this section is the latest available at date of publication. Further details can be found in the Glossary section of this factsheet. As some ratings agencies may use past performance to produce their assessments, these are not a reliable indicator of future results.

Morningstar Style Box ®

Overall Morningstar™ Rating:

Fund Facts

Launch date: 30.01.12
 Portfolio manager: Daniel Roberts
 Appointed to fund: 30.01.12
 Years at Fidelity: 8
 Fund size: £1,262m
 Number of positions in fund*: 43
 Fund reference currency: UK Sterling (GBP)
 Fund domicile: United Kingdom
 Fund legal structure: OEIC
 Management company: FIL Investment Services (UK) Limited
 Capital guarantee: No

*A definition of positions can be found on page 3 of this factsheet in the section titled "How data is calculated and presented."

Share Class Facts

Other share classes may be available. Please refer to the prospectus for more details.

Launch date: 15.10.12
 NAV price in share class currency: 2.384
 ISIN: GB00B7GJPN73
 SEDOL: B7GJPN7
 Bloomberg: FIDGDWA LN
 Dealing cut-off: 12:00 UK time
 Distribution type: Accumulating
 Historic yield: 2.38%
 Charges made to income or capital: Capital
 Ongoing Charges Figure (OCF) per year: 0.92% (28.02.19)
 OCF takes into account annual management charge per year: 0.75%

Share Class Risk and Reward Profile

This risk indicator is taken from the key information document at the relevant month-end. Because it may be updated during a month, please refer to the key information document for the most up-to-date information.

- The risk category was calculated using historical performance data.
- The risk category may not be a reliable indication of the future risk profile of the fund, is not guaranteed and may change over time.
- The lowest category does not mean a "risk free" investment.
- The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.

Important Information

The value of investments and any income from them may go down as well as up and an investor may not get back the amount invested. The use of financial derivative instruments may result in increased gains or losses within the fund.

GLOBAL DIVIDEND FUND W - ACC SHARES

30 JUNE 2019

Past performance is not a reliable indicator of future results. The fund's returns can be affected by fluctuations in currency exchange rates.

Source of fund performance and volatility and risk measures is Fidelity. Performance is excluding initial charge.

Basis: bid-bid with income reinvested, in GBP, net of fees.

Market indices are sourced from RIMES and other data is sourced from third-party providers such as Morningstar.

*Performance commencement date.

**Quartile rank refers to performance over time rated on a scale of 1-4. A ranking of 1 indicates that the item being ranked is in the top 25% of the sample and so on.

Rankings are based on a performance record that is included in the Peer Group Universe. In line with Investment Association methodology, this record may include a track record extension from a legacy share class and the record may not be the same class of this factsheet.

GLOBAL DIVIDEND FUND W - ACC SHARES

30 JUNE 2019

Introduction

This factsheet contains information about the composition of the fund at a particular point in time. It aims to help you understand how the fund manager is positioned to achieve the fund's objectives.

The Equity Exposure table below provides an overall view of the fund. This represents - in percentage terms - how much of the fund is invested in the market. The higher the figure, the more the fund will take part in any market rises (or falls).

The definitions section provides a more comprehensive explanation of the individual elements in the table.

The exposure and positioning tables on page 4 break the fund down into a number of different views, each providing a different perspective on the fund's investments.

How data is calculated and presented

Portfolio composition data has been calculated and presented according to several general principles, which are listed below.

- **Aggregation:** all investments, including derivatives, linked to a particular issuing company have been combined to form a total percentage holding for each company. The aggregate holding is referred to in this factsheet as a position. Where a company is listed in two separate countries, each listing may be classified as a separate issuing company. Exchange Traded Funds (ETFs) and derivatives on ETFs are treated as individual securities - ie not aggregated.

- **Categorisation:** for investments that have underlying securities we use the attributes of the underlying issuing company or common share to determine the appropriate sector, market capitalisation band and geographic area.

- **Derivatives:** all derivatives are included on an exposure basis and, where necessary, are delta-adjusted. Delta-adjusting expresses derivatives in terms of the equivalent number of shares that would be needed to generate the same return.

- **"Basket" securities:** securities that represent a number of company shares - like index futures or options - are allocated to categories (such as country) whenever possible. Otherwise they are included in the "Other Index / Unclassified" category.

Equity Exposure (% TNA)

	Exposure (% TNA)
Equity	94.3
Other	0.0
Uninvested Cash	5.7

Definition of terms:

Equity: the percentage of the fund that is currently invested in the equity market.

Other: the value of any non-equity investments (excluding cash funds) expressed as a percentage of fund TNA.

Uninvested cash: this is 100% minus the fund's Equity exposure and minus Other. This leaves any residual cash exposure that is not invested in shares or via derivatives.

% TNA: Data is presented as a percentage of TNA, which stands for Total Net Assets (the value of all the fund's assets after the deduction of any liabilities).

Active Money

Active Money	92.4%
--------------	-------

This is the sum of the fund's overweight positions (including effective cash) when compared to the market index.

Top 50	94.3	28.9

Definition of terms:

Index: the index used in the positioning tables on this page is the index defined in the Performance Comparator(s) section on page 2 of this factsheet.

Top Positions: those companies in which the largest percentages of the fund's total net assets are effectively invested. Positions in other funds - including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear.

Top Overweight & Underweight Positions: those positions which have the largest active weight relative to the index. Positions in other funds - including ETFs (Exchange Traded Funds) - can appear in this table, but index derivatives form part of an "Other Index / Unclassified" category which will not appear.

Positions Concentration: illustrates the weight of the top 10, 20 and 50 positions in the fund and the weight of the top 10, 20 and 50 positions in the index. It does not attempt to show the coincidence of security ownership between fund and index.

The **sector/industry classification** used (ie GICS, ICB, TOPIX or IPD) varies by fund. Full descriptions of GICS, ICB, TOPIX and IPD can be found in the glossary.

GLOBAL DIVIDEND FUND W - ACC SHARES

30 JUNE 2019

Attribution

Performance attribution is produced in the currency shown below. For funds with multiple share classes, the attribution return reflects the aggregate performance across all the share classes. It may therefore deviate from the published return for a particular share class. When using the analysis for hedged share classes, please consider that the attribution is shown before the impact of hedging.

The contributions shown in the tables are before the impact of charges. If charges are applied, their effect is captured in the "Other" category in the tables and will also be reflected in the fund return.

All investments, including derivatives, linked to a particular issuing company have been combined to form a total percentage for each issuing company.

The sector/industry and country contribution tables (where relevant) display a maximum of eleven individual sectors/industries or countries. For funds investing in more than eleven sectors/industries or countries, only top five and bottom five are listed, with the contribution from other sectors/industries or countries shown in the "Other Sectors" or "Other Countries" category.

GLOBAL DIVIDEND FUND W - ACC SHARES

30 JUNE 2019

Glossary / additional notes

Volatility & Risk

Annualised volatility: a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as "standard deviation"). Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk. The calculation is the standard deviation of 36 monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

Relative volatility: a ratio calculated by comparing the annualised volatility of a fund to the annualised volatility of a comparative market index. A value greater than 1 indicates the fund has been more volatile than the index. A value less than 1 shows the fund has been less volatile than the index. A relative volatility of 1.2 means the fund has been 20% more volatile than the index, while a measure of 0.8 would mean the fund has been 20% less volatile than the index.

Sharpe ratio: a measure of a fund's risk-adjusted performance, taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate. The ratio is calculated by subtracting the risk-free return (such as cash) in the relevant currency from the fund's return, then dividing the result by the fund's volatility. It is calculated using annualised numbers.

Annualised alpha: the difference between a fund's expected return (based on its beta) and the fund's actual return. A fund with a positive alpha has delivered more return than would be expected given its beta.

Beta: a measure of a fund's sensitivity to market movements (as represented by a market index). The beta of the market is 1.00 by definition. A beta of 1.10 shows that the fund could be expected to perform 10% better than the index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund could be expected to perform 15% worse than the market return during up markets and 15% better during down markets.

Annualised tracking error: a measure showing how closely a fund follows the index to which it is being compared. It is the standard deviation of the fund's excess returns. The higher the fund's tracking error, the higher the variability of fund returns around the market index.

Information ratio: a measure of a fund's effectiveness in generating excess return for the level of risk taken. An information ratio of 0.5 shows the fund has delivered an annualised excess return equivalent to half the value of the tracking error. The ratio is calculated by taking the fund's annualised excess return and dividing it by the fund's tracking error.

R²: a measure representing the degree to which a fund's return can be explained by the returns of a comparative market index. A value of 1 signifies the fund and index are perfectly correlated. A measure of 0.5 means only 50% of the fund's performance can be explained by the index. If the R² is 0.5 or lower, the fund's beta (and therefore its alpha too) is not a reliable measure (due to a low correlation between fund and index).

Ongoing charges

The ongoing charges figure represents the charges taken from the fund over a year. It is calculated at the fund's financial year end and may vary from year to year. For classes of funds with fixed ongoing charges, this may not vary from year to year. For new classes of funds or classes undergoing corporate actions (eg amendment to annual management charge), the ongoing charges figure is estimated until the criteria are met for an actual ongoing charges figure to be published.

The types of charges included in the ongoing charges figure are management fees, administration fees, custodian and depositary fees and transaction charges, shareholder reporting costs, regulatory registration fees, Directors fees (where applicable) and bank charges.

It excludes: performance fees (where applicable); portfolio transaction costs, except in the case of an entry/exit charge paid by the fund when buying or selling units in another collective investment undertaking.

For more information about charges (including details of the fund's financial year end), please consult the charges section in the most recent Prospectus.

Historic yield

The historic yield for a fund is based on its dividends declared over the preceding 12 months. It is calculated by summing the dividend rates declared in that period, divided by the price as at the date of publication. Declared dividends may not be confirmed and may be subject to change. Where 12 months of declared dividend data does not exist a historic yield will not be published.

Sector/industry classification

GICS: Global Industry Classification Standard (GICS) was developed by Standard & Poor's and MSCI Barra. GICS consists of 11 sectors, 24 industry groups, 69 industries and 158 sub-industries. More information is available at <http://www.msci.com/gics>

ICB: The Industry Classification Benchmark (ICB) is an industry classification developed by Dow Jones and FTSE. It is used to segregate markets into sectors within the macroeconomy. The ICB uses a system of 10 industries, partitioned into 19 supersectors, which are further divided into 41 sectors, which then contain 114 subsectors. More information is available at <http://www.icbenchmark.com/>

TOPIX: Tokyo stock Price Index, commonly known as TOPIX, is a stock market index for the Tokyo Stock Exchange (TSE) in Japan, tracking all domestic companies of the exchange's First Section. It is calculated and published by the TSE.

IPD means the Investment Property Databank who are a provider of performance analysis and benchmarking services for investors in real estate. IPD UK Pooled Property Funds Index - All Balanced Funds is a component of the IPD Pooled Funds Indices which is published quarterly by IPD.

Independent Assessment

Scope Fund Rating: The rating measures how well a fund has balanced risk and reward relative to its peers. The rating is based solely on performance for funds with a five year track record. Funds with a shorter history also undergo qualitative assessment. For example, this may include looking at management style. The rating scale is A = very good, B = good, C = average, D = below average and E = poor.

Morningstar Star Rating for Funds: The rating measures how well a fund has balanced risk and reward relative to its peers. Star ratings are strictly based on past performance and Morningstar suggests investors use them to identify funds that are worthy for further research. The top 10% of funds in a category will receive a 5-star rating and the next 22.5% receive a 4-star rating. Only ratings of 4 or 5 stars are displayed on the factsheet.

Morningstar Style Box: The Morningstar Style Box is a nine-square grid that provides a graphical representation of the investment style of funds. It is based on fund holdings and classifies funds according to market capitalisation (the vertical axis) and growth and value factors (the horizontal axis). The value and growth factors are based on measures such as earnings, cashflow and dividend yield and use both historical and forward-looking data.
