### Fund aim

The Fund aims to provide an absolute (more than zero) return, typically over a 12-month period. An absolute return performance is not guaranteed over this, or any other, time period and consequently your capital is at risk. The Fund will typically invest at least 60% in shares or derivatives of UK companies. The Fund takes long positions on shares it believes will rise and short positions in shares it believes will fall. A substantial proportion of the Fund's assets may at any time consist of cash and near cash. The Fund may also invest up to 40% in shares or derivatives of companies outside of the UK. The Fund makes extensive use of derivatives to obtain both its long and short investment exposure.

### Additional information

Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies, and your home currency will expose you to currency risk.

## What are the risks specific to this fund?

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- If a Fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a Fund which is more broadly diversified.
- This fund is designed to be used only as one component in several in a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested into this fund.
- The Fund may use derivatives towards the aim of achieving its investment objective. This can result in 'leverage', which can magnify an investment outcome and gains or losses to the Fund may be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations.
- If the Fund holds assets in currencies other than the base currency of the Fund or you invest in a share class of a different currency to the Fund (unless 'hedged'), the value of your investment may be impacted by changes in exchange rates.
- Investment management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.
- The Fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Fund.
- The Fund involves a high level of buying and selling activity and as such will incur a higher level of trading costs than a fund that trades less frequently.
- The fund may invest up to 40% in shares or derivatives of share of companies outside the UK
- Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.
- Derivatives use exposes the Fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.
- Leverage arises from entering into contracts or derivatives whose terms have the effect of magnifying an outcome, meaning profits and losses from investment can be greater.
- If the Fund or a specific share class of the Fund seeks to reduce risks (such as exchange rate movements), the measures designed to do so may be ineffective, unavailable or detrimental.

## General risks

- Past performance is not a guide to future performance.
- The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.
- Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change.
