

Premier Miton Defensive Growth Fund

Sterling class B - Income shares

Objective

The objective of the fund is to provide positive returns over rolling three year periods in all market conditions with less than a quarter of the volatility of the FTSE All-World Index, which may result in the returns from the fund being constrained. Three years is also the minimum recommended period for holding shares in this fund. This does not mean that the fund will achieve the objective over this, or any other, specific time period and there is a risk of loss to the original capital invested.

Fund facts

Fund size	£89.0m
Launch dates	Fund - 21 Dec 2010 Share class - 21 Dec 2010
Fund structure	OEIC
Reporting dates	Final - 31 May Interim - 30 Nov
Base currency	GBP
Valuation point	12:00 noon
ISA eligible	Yes
Investment Association sector	IA Targeted Absolute Return
Performance comparator	Sterling Overnight Index Average

Investment overview

- A diversified lower risk portfolio investing across different asset classes, geographical regions and financial markets.
- The fund managers have the flexibility to find the most appropriate investments, and are not restricted to one asset class or geographical region.
- Asset classes could include equities, fixed

income, alternative investments (which may include Real Estate Investment Trusts, and investments aimed at making positive returns in all market conditions), structured investments and cash. The fund may also invest in collective investment schemes (including those managed or operated by the ACD and its affiliates).

Source: FE Analytics. Based on Sterling class B - Income shares, on a total return basis to 29 February 2024. Performance is shown net of fees with income reinvested. On 20.01.2020, this fund moved from a single pricing basis (mid) to a swing pricing basis.

Risks: The value of investments may fluctuate which will cause fund prices to fall as well as rise and investors may not get the original amount invested. The performance information presented on this page relates to the past. Past performance is not a reliable indicator of future returns. More information about the risks of investment is provided later in this document.

Investment themes

Defined Investments

These investments form the core of the fund's portfolio, and are typically defensive investments that are expected to be lower risk. These investments tend to produce predictable returns and typically have a fixed life until they mature or a fixed return or both. The fixed life allows the fund managers to more easily identify the major risks that may impact the investment and the fixed return allows the fund managers to calculate how the returns from the investment may be impacted if those risks occur.

Alternatives

The alternative investments are used with the aim of generating an uncorrelated source of returns compared with traditional asset classes, such as equities and bonds. This means that they are expected to react differently, in terms of price movement, to other types of assets, in normal market conditions. They can provide diversification benefits in periods where there is greater fluctuation in financial markets.

Tactical trades

These include investment opportunities identified by the fund managers through analysis of individual investment companies and particular wider economic themes. They tend to have a shorter investment horizon than other investments in the portfolio. The managers look for opportunities that take advantage of pricing dislocations, for example

where they believe an investment is mispriced versus their perception of expected return.

Protection strategies

These investments are designed to reduce the impact of severe price fluctuations and reduce the potential fall in value of the fund; they are not intended to be the principal driver of returns for the fund. They can include reactive hedges, which are investments that aim to offer protection when markets fall and those that aim to provide protection for a lower probability event such as a prolonged downturn in markets.

Asset Pool

This is made up of low risk assets that can be traded easily and regularly that are held as part of the cash management strategy.

Please contact your financial adviser if you have any questions about the information included in this factsheet.

Portfolio breakdown

This fund utilises derivatives, a type of contract where the value is based on the change in price of a specific underlying asset or index. The Gross exposure refers to the absolute proportion of the fund's investments to the specific themes taking into consideration both the derivative position as well as the fund's holdings in the underlying asset.

Investment theme allocation (%)

Gross exposure

■ Protection Strategies	49.2
■ Defined Investments	49.1
■ Alternatives	31.6
■ Asset Pool	29.0
■ Tactical Trades	25.1

Charges

Ongoing charges figure (OCF)	1.13%
as at 31.05.2023	

The OCF is based on the last year's expenses and may vary from year to year. It excludes the costs of buying or selling assets for the fund (unless these assets are shares of another fund). The OCF includes the annual management charge. Transaction charges will also apply. Please refer to the [total costs & charges document](#) on our website for more information.

Initial charge	0.00%
-----------------------	-------

Charges are taken from income

The fund's charges will be taken from income generated by the fund in the form of interest or dividends. If there is not enough income to cover the charges, the rest of the charges will be taken from the fund's capital which could result in capital erosion or constrain capital growth.

Performance comparator

To help investors assess the performance of the Fund, SONIA (Sterling Overnight Index Average) is used for comparison purposes.

SONIA reflects the average of the interest rates that banks pay to borrow sterling overnight from other financial institutions and other institutional investors. As the fund aims to deliver positive returns over a rolling

3 year basis with low volatility, through a portfolio that includes investments with predictable return profiles, we believe it is a meaningful benchmark to help investors assess the performance of the fund.

General risks

Reference to any stock or fund is not a recommendation for investment purposes. All types of investment carry a degree of risk. It is possible you could lose some, or all, of the money you invest. The level of risk varies depending on the type of investment. Typically, you are less likely to lose money over the long term from an investment that is considered low risk, although potential returns may also be lower. Investments considered higher risk typically offer greater opportunities for better long-term returns,

though the risk of losing money is also likely to be higher.

When you invest, it is important that you understand the risk to your money and are comfortable with that level of risk. If you are unsure, we would recommend that you consult a financial adviser.

The value of your investment might not keep up with any rise in the cost of living.

You could lose money if financial markets fall.

There is no guarantee that the investment objective of the fund will be achieved.

The levels of taxation that apply to income or capital gains from the fund, including any tax relief that may be available, will depend on your personal tax situation.

Funds with similar objectives may not perform in the same way as they are likely to have different holdings.

Fund performance will be affected by investment decisions made by the fund manager.

Specific

Some of the main specific risks of investing in this fund are summarised here. Further detail is available in the prospectus for the fund.

Alternative investments

These typically behave differently to traditional investments such as bonds and equities. They can include a range of assets such as specialist lending, private equity, hedge funds and gold. Adding alternative investments to a portfolio can help to make it more diverse but can also make it more volatile.

Call options

A type of derivative. Call options can be used for a number of reasons; they can be used to generate income or to gain exposure to an asset. These can make a fund more volatile from time to time.

Collective investment schemes (funds)

Where other funds are held in a portfolio, or where there is indirect exposure to other funds, these could include higher-risk investments like hedge funds, property funds or commodity funds (e.g. investing in gold, oil), which would increase the overall risk in the fund.

Counterparty credit

Some securities or financial instruments rely on payments or guarantees from a counterparty. This is a role usually undertaken by a bank or similar entity.

Currency

Where investments in a fund are denominated in currencies other than sterling (for example, if a fund holds assets priced in euros), its value will be affected by changes in the relevant exchange rate. Certain other investments, such as the shares in companies with profits from other countries, will also be affected.

Derivative

A contract whose value is based on the change in price of a specific asset or index. When derivatives are used within a fund, it doesn't necessarily increase risk. However, price changes in the underlying asset can translate into big swings in the value of derivatives (up and down), which has a direct effect on the value of the fund.

Equities

Equities (shares) can experience high levels of price fluctuation.

Fixed interest securities

Government and corporate bonds generally offer a fixed level of interest to investors, so

their value can be affected by changes in interest rates. When central bank interest rates fall, investors may be prepared to pay more for bonds and bond prices tend to rise. If interest rates rise, bonds may be less valuable to investors and their prices can fall.

Futures (contracts)

A type of derivative. They allow investors to buy or sell an index, or other asset, today to be settled at a date in the future. These can make a fund more volatile from time to time.

Gearing / leverage

Funds that use gearing / leverage (this can be achieved by the use of derivatives) can experience significantly higher price fluctuations.

Hedging

A hedge is designed to offset the risk of another investment falling in price. It can also act as a limit on potential gains if the investment that has been hedged increases in value.

Inflation

Higher inflation can lead to some investments falling in value, particularly those with a fixed level of interest, for example government bonds and corporate bonds.

Infrastructure

Investments are often in large-scale projects whose profitability can be affected by supply problems or rising prices for raw materials or natural resources. Changes in the wider economy and government regulation can also have a significant influence.

Interest rate

Changes in central bank interest rates can affect all types of assets, in particular, securities such as government bonds and corporate bonds that generally offer a fixed level of interest. If interest rates go up, the value of a bond may fall, and vice versa.

Issuer credit

There are times when the issuer of a security (for example, a company that has issued a bond) is unable to make income payments or repay its debt. When this happens it can result in losses for the fund.

Legal and tax

The income or capital gains from investments can sometimes be affected by changes in legal and tax regulations or how these rules are applied.

Liquidity

In some instances, for example, when market conditions generally are difficult, holdings in

a fund may be difficult to sell and buy at the desired price. The fund value could fall as a result.

Non-investment grade bonds

Bonds with a higher risk that the bond issuer might not meet its income or repayment obligations, as assessed by independent bond rating companies.

Operational

Processes, systems and controls around your investment might fail. The more complex or unusual the investments that the fund holds, the more likely this is to happen. For example, developing markets may have less reliable systems or lower standards of governance than more developed markets.

Over The Counter derivatives (OTC)

These are types of derivatives that are not traded on a public exchange. Agreed privately between two parties, OTC derivatives can be tailored to meet the exact needs of each party. They can make a fund more volatile from time to time.

Property and Real Estate Investment Trusts

Property values can rise and fall sharply depending on the strength of a country's economy.

Put-options

A type of derivative. Put-options can be used for a number of reasons. For example, they can be used to protect the value of an underlying investment or group of investments against a fall in value. They can be thought of as an insurance policy. These can make a fund more volatile from time to time.

Structured investments

These investments are built around a derivative and have specific criteria that need to be met to deliver a positive return. If these criteria are not met, the investment can fall sharply in value.

Unregulated collective investment schemes

These investments can carry additional risks as they are not subject to the same level of regulation as authorised or regulated schemes.

Zero dividend preference shares (ZDPs)

Issued by investment trusts. ZDPs have a maturity date, pay no income but pay a set amount at maturity. Serious falls in market levels can alter their structure and lead to falling values.

Ratings, awards and other information

The methodology and calculations used by the third parties providing the ratings/awards are not verified by Premier Miton Investors and we are unable to accept responsibility for their accuracy, nor should they be relied upon for making an investment decision.

A swing pricing is where the price can swing to either a bid or an offer basis depending on the investment and redemption activity in the fund. This means the investor selling or buying fund shares bears the associated [dis] investment costs and protects the continuing

holders in the fund. Performance could be shown on a combination of bid, mid or offer prices, depending on the period of reporting.

Glossary

Accumulation shares

A fund may have accumulation and income shares. If an investor selects this share type, any income generated by the fund is automatically reinvested. The amount of the reinvested income is reflected in the increased price of each accumulation share.

ACD

Authorised Corporate Directors (ACDs) are responsible for the running of an investment fund. They have a duty to act in the best interests of the fund's investors, and ensure that the fund is well managed in line with regulations and with the investment objectives and policies set out in its prospectus.

Alternative investments / assets

Typically investments other than the more traditional company shares or bonds which could include, for example, commodities (such as gold), infrastructure, private equity, real estate, and hedge funds. Alternative investments can be useful to help with diversification, as some of them are not expected to perform in the same way as more traditional investments.

Annual management charge (AMC)

The yearly fee paid to Premier Miton for managing a fund, expressed as a percentage of your investment. The AMC does not typically change from year to year.

Assets

Different groups of investments such as company shares, bonds, commodities or property.

Bonds (or fixed income)

Types of investments that allow investors to loan money to governments and

companies, usually in return for a regular fixed level of interest until the bond's maturity date, plus the return of the original value of the bond at the maturity date. The price of bonds will vary and the investment terms of bonds will also vary.

Capital

Describes financial assets, particularly cash, or other assets, such as shares, owned by a person or organisation.

Capital growth

The increase in the value of an asset or investment over time, measured by its current value compared to its purchase cost.

Collective Investment Schemes

A generic term for investment funds with more than one investor, such as unit trusts, Open Ended Investment Schemes (OEICs) and investment trusts.

Equities

Another name for shares (or stock) in a company.

Individual Savings Account (ISA)

A type of tax-free scheme, set up by the government, designed to help people make the most of their savings and investments. All income and gains from an ISA investment are exempt from UK Income Tax and Capital Gains Tax. HM Revenue and Customs sets the maximum amounts that you are allowed to invest into an ISA each tax year.

Ongoing Charges Figure (OCF)

A measure of what it costs to invest in a fund over a year. It includes the fee paid to Premier Miton for the management of the

fund (known as the annual management charge), with the remainder covering costs that have to be paid to external companies for other services relating to the ongoing administration and management of a fund, such as the fees paid to the depositary, custodian, regulator, auditor and administrator. The fee is deducted from the value of the fund and reflected in the fund's share price. The OCF is typically calculated once a year and can change from year to year.

Real estate investment trust (REIT)

A company that owns and manages property on behalf of shareholders. A REIT can contain commercial and/or residential property.

Structured investments

These investments are built around a derivative and have specific criteria that need to be met to deliver a positive return.

SONIA (Sterling Overnight Index Average)

The effective overnight interest rate paid by banks to borrow money overnight from other financial institutions. SONIA replaced LIBOR.

Total return

A way of showing how an investment has performed, and is made-up of the capital appreciation or depreciation and includes any income generated by the investment. Measured over a set period, it is expressed as a percentage of the value of the investment at the start of that period.
