

Premier Miton Liberation No. VII Fund

Sterling class A - Accumulation shares

Objective

The objective of the fund is to provide capital growth over the long-term, being five years or more, whilst seeking to remain within a defined risk profile with defined volatility parameters which may result in the income and the capital growth from the fund being constrained. The Investment Adviser will aim to maintain a risk profile classification of 7 as set and monitored by an external third party risk rating company. Five years is also the minimum recommended period for holding shares in this fund. This does not mean that the fund will achieve the objective throughout this, or any other, specific time period and there is a risk of loss to the original capital invested.

Fund facts

Fund size	£18.9m
Launch dates	Fund - 13 Jan 2006 Share class - 13 Jan 2006
Fund structure	OEIC
Reporting dates	Final - 31 Oct Interim - 30 Apr
Base currency	GBP
Valuation point	12:00 noon
ISA eligible	Yes
Investment Association sector	IA Flexible Investment
Performance comparator	IA Flexible Investment

Charges

Ongoing charges figure (OCF) 1.79%
as at 01.04.2023

The OCF includes the annual management charge and OCFs of the underlying funds held in the portfolio. Transaction charges will also apply. Please refer to the [total costs & charges document](#) on our website for more information.

Annual management charge 1.50%
OCFs of underlying funds 0.26%

Initial charge 4.00%

The initial charge has been waived by Premier Miton until further notice. However, if you have invested via a financial adviser, the initial charge may still apply and be paid to your adviser.

Charges are taken from income

The fund's charges will be taken from income generated by the fund in the form of interest or dividends. If there is not enough income to cover the charges, the rest of the charges will be taken from the fund's capital which could result in capital erosion or constrain capital growth.

Performance comparator

As a result of the fund's investment strategy, we believe the IA Flexible Investment sector is a meaningful comparator to help investors assess the performance of the fund.

The Dynamic Planner risk profiling service is being used to profile the fund's investment

portfolio. Dynamic Planner is provided by Distribution Technology, an independent company that offers risk profiling services for funds and portfolios. Dynamic Planner offers risk profiles on a scale of 1 (lowest) to 10 (highest). We will aim to maintain a risk

profile classification of 7 as set and monitored by Dynamic Planner. Whilst Dynamic Planner is currently being used, we may change the risk profiling service to another independent company in the future.

General risks

Reference to any stock or fund is not a recommendation for investment purposes. All types of investment carry a degree of risk. It is possible you could lose some, or all, of the money you invest. The level of risk varies depending on the type of investment. Typically, you are less likely to lose money over the long term from an investment that is considered low risk, although potential returns may also be lower. Investments considered higher risk typically offer greater opportunities for better long-term returns,

though the risk of losing money is also likely to be higher.

When you invest, it is important that you understand the risk to your money and are comfortable with that level of risk. If you are unsure, we would recommend that you consult a financial adviser.

The value of your investment might not keep up with any rise in the cost of living.

You could lose money if financial markets fall.

There is no guarantee that the investment objective of the fund will be achieved.

The levels of taxation that apply to income or capital gains from the fund, including any tax relief that may be available, will depend on your personal tax situation.

Funds with similar objectives may not perform in the same way as they are likely to have different holdings.

Fund performance will be affected by investment decisions made by the fund manager.

Specific

Some of the main specific risks of investing in this fund are summarised here. Further detail is available in the prospectus for the fund.

Alternative investments

These typically behave differently to traditional investments such as bonds and equities. They can include a range of assets such as specialist lending, private equity, hedge funds and gold. Adding alternative investments to a portfolio can help to make it more diverse but can also make it more volatile.

Collective investment schemes (funds)

Where other funds are held in a portfolio, or where there is indirect exposure to other funds, these could include higher-risk investments like hedge funds, property funds or commodity funds (e.g. investing in gold, oil), which would increase the overall risk in the fund.

Commodities (including gold)

Commodity prices can fall and rise sharply depending on supply and demand, the economic background and financial market conditions. Exposure will never be direct to any commodity.

Counterparty credit

Some securities or financial instruments rely on payments or guarantees from a counterparty. This is a role usually undertaken by a bank or similar entity.

Currency

Where investments in a fund are denominated in currencies other than sterling (for example, if a fund holds assets priced in euros), its value will be affected by changes in the relevant exchange rate. Certain other investments, such as the shares in companies with profits from other countries, will also be affected.

Emerging markets

Investments made in bonds, equities or other assets in less-developed countries generally carry higher risk than in developed countries.

Equities

Equities (shares) can experience high levels of price fluctuation.

Fixed interest securities

Government and corporate bonds generally offer a fixed level of interest to investors, so their value can be affected by changes in interest rates. When central bank interest rates fall, investors may be prepared to pay more for bonds and bond prices tend to rise. If interest rates rise, bonds may be less valuable to investors and their prices can fall.

High volatility

This fund may experience high volatility due to the composition of the portfolio or the portfolio management techniques used.

Inflation

Higher inflation can lead to some investments falling in value, particularly those with a fixed level of interest, for example government bonds and corporate bonds.

Infrastructure

Investments are often in large-scale projects whose profitability can be affected by supply problems or rising prices for raw materials or natural resources. Changes in the wider economy and government regulation can also have a significant influence.

Interest rate

Changes in central bank interest rates can affect all types of assets, in particular, securities such as government bonds and corporate bonds that generally offer a fixed level of interest. If interest rates go up, the value of a bond may fall, and vice versa.

Issuer credit

There are times when the issuer of a security (for example, a company that has issued a bond) is unable to make income payments or repay its debt. When this happens it can result in losses for the fund.

Legal and tax

The income or capital gains from investments can sometimes be affected by changes in legal and tax regulations or how these rules are applied.

Liquidity

In some instances, for example, when market conditions generally are difficult, holdings in a fund may be difficult to sell and buy at the

desired price. The fund value could fall as a result.

Non-investment grade bonds

Bonds with a higher risk that the bond issuer might not meet its income or repayment obligations, as assessed by independent bond rating companies.

Operational

Processes, systems and controls around your investment might fail. The more complex or unusual the investments that the fund holds, the more likely this is to happen. For example, developing markets may have less reliable systems or lower standards of governance than more developed markets.

Property and Real Estate Investment Trusts

Property values can rise and fall sharply depending on the strength of a country's economy.

Risk targeting

Remaining within a defined risk profile with defined volatility parameters may result in the investment growth from the portfolio being constrained.

Smaller companies

Investment in smaller companies is typically higher risk than investment in larger companies. Shares in smaller companies can experience greater levels of volatility.

Structure

The providers of the Collective Investment Schemes in which the fund invests may experience operational or credit issues which could impact the value or liquidity of their funds.

Structured investments

These investments are built around a derivative and have specific criteria that need to be met to deliver a positive return. If these criteria are not met, the investment can fall sharply in value.

Unregulated collective investment schemes

These investments can carry additional risks as they are not subject to the same level of regulation as authorised or regulated schemes.

Ratings, awards and other information

The methodology and calculations used by the third parties providing the ratings/awards are not verified by Premier Miton Investors and we are unable to accept responsibility for their accuracy, nor should they be relied upon for making an investment decision.

A swing pricing is where the price can swing to either a bid or an offer basis depending on the investment and redemption activity in

the fund. This means the investor selling or buying fund shares bears the associated [dis] investment costs and protects the continuing holders in the fund. Performance could be shown on a combination of bid, mid or offer prices, depending on the period of reporting.

Distribution Technology provide the Dynamic Planner® risk-profiling services in connection with these funds. Distribution Technology is not authorised

to provide financial advice. We do not have any influence over the risk profiles or the methodology used to create them, and we are unable to provide assurances as to their accuracy or that they will not change, or that Distribution Technology will continue to provide these risk profiles in the future.

Glossary

Accumulation shares

A fund may have accumulation and income shares. If an investor selects this share type, any income generated by the fund is automatically reinvested. The amount of the reinvested income is reflected in the increased price of each accumulation share.

ACD

Authorised Corporate Directors (ACDs) are responsible for the running of an investment fund. They have a duty to act in the best interests of the fund's investors, and ensure that the fund is well managed in line with regulations and with the investment objectives and policies set out in its prospectus.

Alternative investments / assets

Typically investments other than the more traditional company shares or bonds which could include, for example, commodities (such as gold), infrastructure, private equity, real estate, and hedge funds. Alternative investments can be useful to help with diversification, as some of them are not expected to perform in the same way as more traditional investments.

Annual management charge (AMC)

The yearly fee paid to Premier Miton for managing a fund, expressed as a percentage of your investment. The AMC does not typically change from year to year.

Assets

Different groups of investments such as company shares, bonds, commodities or property.

Bonds (or fixed income)

Types of investments that allow investors to loan money to governments and companies, usually in return for a regular fixed level of interest until the bond's maturity date, plus the return of the original value of the bond at the maturity date. The price of bonds will vary and the investment terms of bonds will also vary.

Capital

Describes financial assets, particularly cash, or other assets, such as shares, owned by a person or organisation.

Capital growth

The increase in the value of an asset or investment over time, measured by its current value compared to its purchase cost.

Collective Investment Schemes

A generic term for investment funds with more than one investor, such as unit trusts, Open Ended Investment Schemes (OEICs) and investment trusts.

Convertible bonds

A type of bond that the holder can convert into shares of the issuing company in certain circumstances.

Dividends

The portion of its capital that a company chooses to return to its shareholders. For a fund or trust, this is the payment of fund's income to its shareholders.

Emerging markets

Countries with less developed financial markets and which are generally considered riskier than investing in developed markets.

Equities

Another name for shares (or stock) in a company.

High yield bonds

Bonds that are expected to have a higher risk of defaulting on interest payments or repayment of the issue value on maturity and receive lower ratings from credit rating agencies.

Investment Association (IA)

The trade association that represents investment management firms in the UK.

IA sectors

To help with comparisons between the thousands of funds available, funds are categorised into different groups or sectors, organised and reviewed by the Investment Association (IA).

IA Flexible Investment sector

The funds in this sector are expected to have a range of different investments. However, the fund manager has significant flexibility over what to invest in. There is no minimum or maximum requirement for investment in company shares (equities) and there is scope for funds to have a high proportion of shares. The manager is accorded a significant degree of discretion over asset allocation and is allowed to invest up to 100% in equities at their discretion.

- No minimum equity requirement
- No minimum fixed income or cash requirement

IA Volatility Managed sector

This sector includes funds whose objective is to manage their returns within

specified volatility parameters. Outcomes are not guaranteed. Timeframes and methodologies for management of volatility may vary from fund to fund. Volatility is one type of risk. It is a measure of the ups and downs of performance of a fund. The higher the volatility, the more uncertainty there is in the returns.

Individual Savings Account (ISA)

A type of tax-free scheme, set up by the government, designed to help people make the most of their savings and investments. All income and gains from an ISA investment are exempt from UK Income Tax and Capital Gains Tax. HM Revenue and Customs sets the maximum amounts that you are allowed to invest into an ISA each tax year.

Multi asset

A fund that invests across a combination of different asset classes, such as commercial property, company shares, bonds and alternative investments with the aim of increasing diversification and reducing risk, and achieving specific investment objectives such as paying an income.

Ongoing Charges Figure (OCF)

A measure of what it costs to invest in a fund over a year. It includes the fee paid to Premier Miton for the management of the fund (known as the annual management charge), with the remainder covering costs that have to be paid to external companies for other services relating to the ongoing administration and management of a fund, such as the fees paid to the depositary, custodian, regulator, auditor and administrator. The fee is deducted from the value of the fund and reflected in the fund's share price. The OCF is typically calculated once a year and can change from year to year.

Structured investments

These investments are built around a derivative and have specific criteria that need to be met to deliver a positive return.

Total return

A way of showing how an investment has performed, and is made-up of the capital appreciation or depreciation and includes any income generated by the investment. Measured over a set period, it is expressed as a percentage of the value of the investment at the start of that period.
