

# Company Summary

Temple Bar Investment Trust PLC's ('the Company') investment objective is to provide growth in income and capital to achieve a long-term total return greater than the benchmark FTSE All-Share Index, through investment primarily in UK securities. The Company's policy is to invest in a broad spread of securities with typically the majority of the portfolio selected from the constituents of the FTSE 350 Index.

## Benchmark

Performance is measured against the FTSE All-Share Index.

## Total assets less current liabilities

£758,904,000

## Total equity

£695,444,000

## Market capitalisation

£698,418,421

## Capital structure

## TOTAL RETURNS for the half year ended 30 June 2013

Return on net assets	16.7
Return on gross assets	15.5
Return on share price	15.9
FTSE All-Share Index	8.5

# Chairman's Statement

The total return on the net assets of Temple Bar during the first half of 2013 was 16.7%, an encouraging capital performance compared with a total return for the FTSE All-Share Index of 8.5%. Post-tax revenue earnings for the half year were £12.2 million compared with £12.6 million in the equivalent period last year. The Board has declared an interim dividend of 15.10p, an increase of 3.1% over last year, payable on 30 September to shareholders on the register at 13 September 2013.

## Long term borrowing

At the beginning of July the Board announced that it had agreed a £50 million fixed rate 15 year private placement loan note at a coupon of 4.05%. The loan, which will be drawn down on 3 September 2013, provides long term funding at attractive rates and will help the Company to pursue its stated investment objective as well as contributing to the Company's overall debt management in the context of its existing debenture stocks, which mature in 2017 and 2021. As at the half year the Company's net gearing level, calculated in accordance with AIC recommended methodology, was 3%.

## New share issues

During the period the Company obtained a block listing for 2 million shares to facilitate the issue of smaller amounts of shares for cash to market participants in a cost effective manner at a modest premium to net asset value. The Board believes that it is important to be proactive in managing the discount/premium in the best interests of shareholders. The Company's shares have generally been trading at a premium to net asset value for a substantial period of time. The Board therefore favours regular small issues of shares to ensure that a premium is kept at a reasonable and sustainable level. In the first half of the year a total of 606,113 ordinary shares were issued, raising net proceeds of £6,794,872.

## Industry developments

In the Annual Report I referred to the effect on the Company of the European Union's Alternative Investment Fund Managers Directive which imposes additional oversight on investment companies. The Board is required to appoint an AIFM under the relevant legislation and will report further on this at the year end. There is also a requirement to appoint a depositary and the Board is confident that an appointment can be concluded within the next few months, ahead of the implementation date of the legislation in July 2014.

# Manager's report

In the face of the continued extravagant quantitative easing by the major Central Banks in the first half of the year, bearish investors decided the best course of action was to step out of the way. The 'don't fight the Fed' (and by implication, the Bank of England, European Central Bank and the Bank of Japan) mentality determined that until economic growth was self-sustaining, the Central Banks' actions would support markets. And with the Central Banks' policies designed to ensure interest rates remained low across the yield curve, equities' relative valuation advantage was considered by the consensus to be underpinned.

In general, investors prefer strong, simple narratives and happy endings and, because of this, shy away from uncomfortable arguments. However, that often results in investment decisions based more on hope than objectivity. Our views remain the same – the results of the great financial experiment, which we are only part way through, remain inconclusive and monetary authorities do not have the power to support equity markets indefinitely. The unintended consequences and disadvantages of their adventurous policy are in all likelihood still to come. Equity investors may then have to compare equity valuations with rather higher bond yields. What is more, even if economic recovery takes a grip, the more pertinent question is the level of future company profitability. This profitability is already high relative to history and to believe it is moving much higher is to believe in a new paradigm; not impossible, but in our view not a great bet to make. And even if investors are comfortable with current and forecast levels of profitability, it remains vital to determine the correct price to pay for the profit stream. Once again, relative to history, investors are currently paying a high price.

We see little reason to assume future profitability will be significantly higher than historic profitability or to pay more for this stream of profits than we have historically. As the market clearly disagrees with us (on both points) we have consequently had an

opportunity to sell stocks at attractive prices. Travis Perkins and Devro, two long-time holdings, were sold in full and two of our largest holdings, Signet Jewelers and Unilever, were reduced. We also decided that, post its decision to cancel share buybacks, we could no longer justify our holding in AstraZeneca and sold out, reinvesting the proceeds in GlaxoSmithKline and Vodafone. We also added to Direct Line, a company about which we wrote in detail in the last Report and Accounts, BAT and Carnival.

One new acquisition we have made, through an Exchange Traded Commodity, is of gold bullion. Gold has lost its allure in recent months as investors concluded that the potential inflationary impact of quantitative easing has reduced now the Federal Reserve has given the first signs that it is preparing to reduce the artificial stimulants to economic growth.

We would question the enthusiasm for selling gold. Firstly, while the Federal Reserve clearly believes that economic conditions are improving, its forecasting record is less than perfect and secondly, the market's assumptions that quantitative easing will soon be totally reversed may be a touch premature as the Fed's first actions will be 'tapering' (i.e. buying less bonds) rather than selling any of the \$3.5 trillion dollars' worth of bonds on its books.

It is possible that the world's major central bankers have cobbled together and implemented policies perfectly designed for the prevailing conditions and that they will exit stage left to rapturous applause leaving little evidence of their handiwork. Alternatively, their policies may well have longer lasting effects and investor confidence in paper money could be severely tested. We believe it is far too early to announce success and therefore we made a modest investment in gold bullion in April to provide some element of insurance to the portfolio.

The gold bullion builds on our current gold exposure which we hold through an ETF of large gold mining shares. This ETF was the most costly of the holdings on the portfolio

## Manager's report continued

in the six months under review. Whilst the weakness in the gold price did not help, there were a host of other issues weighing on the stock prices; increasing extraction and labour costs, poor allocation of capital and weakening balance sheets all contributed. We typically aim to increase our holdings as share prices fall but our initial confidence in gold mining companies has been knocked. If the gold price recovers significantly, the gold mining shares should be carried along in their wake, but this cannot be guaranteed. A mix of gold and gold mining shares is therefore our preferred approach.

Fortunately, the underperformance of the gold shares was more than counterbalanced by a decent number of winners. Long-term holdings Signet Jewelers, Grafton and Travis Perkins all continued to perform well and Avon, under new management, bounced back well. A lack of exposure to UK listed mining stocks also contributed positively to performance.

### Outlook

In the UK, the appointment of Mark Carney, the new governor of the Bank of England and previously head of the Bank of Canada, has been taken positively by investors (although the best way to endear yourself to investors is clearly to promise low interest rates for elongated periods). He has, however, left behind an economy that has its own problems, not least a huge amount of household debt and a troubled residential property market. Perhaps Mr Carney's main selling point to his new employers was his very relevant previous experience.

As we have made clear, the market's higher valuations cannot be justified by expectations of higher profits and we believe there is significantly less value apparent than say twelve months ago. This is particularly evident in the higher yielding areas in which Temple Bar typically participates, probably a consequence of the lack of income opportunities in bond markets. We are convinced it is wrong to chase these lower yields and are therefore, in general, happy to stand back and await better opportunities.

### Alastair Mundy

# Responsibility statement

The directors confirm to the best of their knowledge that:

- the condensed set of financial statements contained within the half-year report has been prepared in accordance with the Accounting Standards Board's Statement 'Half-Yearly Financial Reports';
- the half-yearly financial report, which incorporates the interim management report, includes a fair review of the information required by Disclosure and Transparency Rule 4.2.7R of important events that have occurred during the first six months of the financial year and their impact on the condensed set of financial statements and a description of the principal risks and uncertainties for the remaining six months of the financial year; and

- in accordance with Disclosure and Transparency Rule 4.2.8R there have been no related parties transactions during the six months to 30 June 2013 and therefore nothing to report on any material effect by such a transaction on the financial position or performance of the Company during that period.

The half-yearly financial report was approved by the Board on 23 July 2013 and the above responsibility statement was signed on its behalf by:

**John Reeve**

## Notes to the financial statements continued

### 5 DIVIDENDS

The final dividend relating to the year ended 31 December 2012 of 22.0 pence per ordinary share was paid during the six months ended 30 June 2013.

An interim dividend of 15.10 pence per ordinary share will be paid on 30 September 2013 to shareholders registered on 13 September 2013. In accordance with IFRS, this dividend has not been recognised in these financial statements. The ex-dividend date for this payment is 11 September 2013.

### 6 COMPARATIVE FIGURES

The financial information contained in this half-year report does not constitute statutory accounts as defined in sections 434-436 of the Companies Act 2006. The financial information for the six months ended 30 June 2013 and 30 June 2012 has not been audited.

The information for the year ended 31 December 2012 does not constitute statutory accounts, but has been extracted from the latest published audited accounts, which have been filed with the Registrar of Companies. The report of the auditors on those accounts contained no qualification or statement under section 498 (2) or (3) of the Companies Act 2006.

### 7 PUBLICATION

This half-year report is being sent to shareholders and copies will be made available to the public at the Company's registered office and on its website.
