BlackRock World Mining Trust plc

Half Yearly Financial Report 30 June 2013

Performance to 30 June 2013

	Six	Five
	months	years
Net asset value per share:		
- capital only	-30.4%	-43.8%
- with income reinvested	-28.9%	-39.2%
Ordinary share price:		
- capital only	-27.2%	-39.9%
- with income reinvested	-25.4%	-34.2%
HSBC Global Mining Index*:		
- capital only	-29.1%	-41.0%
- with income reinvested	-28.0%	-34.2%

Adjusted for exchange rates relative to sterling.

A dividend of 14.00p per share went ex-dividend on 6 March 2013. Where performance has income included, it is re-invested on the ex-dividend date. Sources: BlackRock and DataStream.

Chairman's Statement

Overview

The mining sector has been through a challenging period over the last few years and the advent of 2013 provided no respite. Despite a strong start to the year for global equities following a note of cautious optimism in market sentiment, mining equities failed to keep pace and share prices among the top global miners declined sharply.

Against this backdrop, in the six months to 30 June 2013, the Company's net asset value decreased by 28.9% and the share price declined by 25.4% (both calculated in sterling terms with income reinvested). During the same period the Company's benchmark, the HSBC Global Mining Index, fell by 28.0%. Further details on the Company's performance are set out in the Investment Manager's

Since the period end, the Company's net asset value has increased by 11.2% compared to a rise of 12.3% in the benchmark index.

Earnings and dividends

Revenue earnings per share for the period to 30 June 2013 amounted to 12.82p. The Directors are pleased to declare an interim dividend of 7.00p per share (2012: 7.00p per share) payable on 26 September 2013 to shareholders on the register on 30 August 2013 (ex dividend date 28 August 2013).

Changes to the Company's investment policy

Changes to the Company's investment policy At a General Meeting of the Company held today, shareholders approved a resolution to amend the Company's investment policy on the terms described in the Circular to shareholders dated 29 July 2013. The new investment policy clarifies that the Company may invest in royalties derived from the production of metals and minerals as part of its permission to invest in unquoted investments. In addition, the limit of unquoted investments has been raised from 10% to 20% of gross assets in order to allow the Company to obtain greater exposure to metal and mining related royalties.

Alternative Investment Fund Manager's Directive

The Alternative Investment Fund Manager's Directive ("the Directive") is a The Alternative investment rund Manager's Directive (the Directive) is a European directive which seeks to reduce potential systemic risk by regulating alternative investment fund managers ("AIFMs"). AIFMs are responsible for investment products that fall within the category of Alternative Investment Funds ("AIFS") and investment trusts are included in this. The Directive was implemented with effect from 22 July 2013 although it has been confirmed that Implemented with effect from 22 July 2015 although It has been confirmed that the Financial Conduct Authority will permit a transitional period of one year within which UK AIFMs must seek authorisation. The Board is currently taking independent advice on the consequences for the Company and has decided in principle that BlackRock will be appointed as its AIFM in advance of the end of the transitional period on 22 July 2014.

Outlook
Despite the significant challenges faced by the mining sector over the last two years, the industry is making good progress with the issues it has faced. This has resulted in significant management change at mining companies and a commitment to reduce operating costs and capital investment, together with a pledge to focus on shareholder returns. Additionally, future commodities demand appears to be healthy, largely driven by China and the US, and if growth, sentiment and risk appetite continue to improve in 2013, the mining sector could well enjoy renewed positive momentum. The Company will continue to look to identify those companies with greater growth prospects and will work on developing its royalty exposure, together with the Company's increased emphasis developing its royalty exposure, together with the Company's increased emphasis

A W Lea 21 August 2013

Interim Management Report and Responsibility Statement

The Chairman's Statement and the Investment Manager's Report give details of the important events which have occurred during the period and their impact on the financial statements.

₽ □

Principal risks and uncertainties The principal risks faced by the Company can be divided into various areas as follows.

- Performance;
- Income/dividend;
- Regulatory;
- Operational;
- Resource;
- Market:
- Financial (including market price risk, foreign currency risk, interest rate risk and liquidity and credit risk);
- Third party.

The Board reported on the principal risks and uncertainties faced by the Company in the Annual Report and Accounts for the year ended 31 December 2012. A detailed explanation can be found on pages 20 to 22 and 52 to 59 of the Annual Report and Accounts which is available on the website maintained by the Investment Manager, BlackRock Investment Management (UK) Limited, at www.blackrock.co.uk/brwm.

In the view of the Board, there have not been any changes to the fundamental nature of these risks since the previous report and these principal risks and uncertainties are equally applicable to the remaining six months of the financial year as they were to the six months under review.

Related party disclosure and transactions with Investment Manager The Investment Manager is regarded as a related party under the Listing Rules and details of the management fees payable are set out in note 3 and note 8. The related party transactions with the Directors are set out in note 9.

Going concern

The Directors are satisfied that the Company has adequate resources to continue in operational existence for the foreseeable future and is financially sound. For this reason, they continue to adopt the going concern basis in preparing the financial statements. The Company has a portfolio of investments which are considered to be readily realisable and is able to meet all of its liabilities from its assets and income generated from these assets.

Directors' responsibility statement

The Disclosure and Transparency Rules ("DTR") of the UK Listing Authority require the Directors to confirm their responsibilities in relation to the preparation and publication of the Interim Management Report and Financial

The Directors confirm to the best of their knowledge that:

- the condensed set of financial statements contained within the half yearly financial report has been prepared in accordance with International Accounting Standard 34 "Interim Financial Reporting"; and
- the interim management report, together with the Chairman's Statement and Investment Manager's Report, include a fair review of the information required by 4.2.7R and 4.2.8R of the FCA's Disclosure and Transparency Rules.

The half yearly financial report was approved by the Board on 21 August 2013 and the above responsibility statement was signed on its behalf by the Chairman.

For and on behalf of the Board 21 August 2013

Investment Manager's Report

In last year's interim report we started by referring to the difficult time that share prices had been through. This year the situation is no different, in fact the moves have been even more severe. Equity valuations collapsed during the first half of 2013 and when viewed in comparison to the move in commodity prices, the falls seem extreme. When compared to the positive return in world equity indices, the magnitude of the falls looks even more extraordinary.

During the last few years such moves have been associated with turbulence in the global economy, the fallout from the financial crisis and a collapse of consumer confidence; yet the first half of this year has been relatively benign from a "macro" perspective. During the first six months of 2013 the Chinese economy grew at 7.6%. Steel consumption in China has been running ahead of expectations at around a 780mtpa run rate, with cumulative production for the expectations at around a 780mtpa run rate, with cumulative production for the first half up 9% year-on-year. Outside China, the US economy has exceeded expectations with the pace of its recovery. GDP growth for the world's largest economy has not excited beyond measure (the revised first quarter print was 1.8%), but other measures of activity, and notably in commodity intensive areas, have surprised on the upside. The US housing sector has bounced with housing starts showing good signs of recovery and this has been integral to the general improvement in consumer confidence. Other parts of the economy have also contributed, for example US vehicle sales were up 36% year-on-year in June. Europe remains the laggard, although there have been some limited signs of improvement.

The resilience of the US recovery led to commentary in May from the head of the US Federal Reserve hinting at the tightening or "tapering" of the loose monetary policy first introduced to stimulate economic growth in 2009. The monetary policy first introduced to stimulate economic growth in 2009. The possibility of a more rapid than expected withdrawal of liquidity spread nervousness throughout markets impacting bond prices, currencies and the price of gold. Subsequent comments striking a more tentative tone around America's economy have acted to cool these fears to some degree. Elsewhere in the UK, Europe and Japan, caution on the underlying strength of the world picture has prompted central bankers to reiterate that supportive monetary policies would remain in place for a while longer.

As in the prior period, metal prices for key holdings in the Company have remained at levels which continue to deliver attractive margins for these companies. For example, iron ore prices during the first half of the year averaged US\$137/t, down just 2.7% on the first half of 2012. Even more

important for the second half of the year is the recent weakness in the Australian dollar. Should the US dollar remain strong during the remainder of the year it is likely that this will provide some additional support to profit margins for these producers.

Policy change

As discussed earlier, central banks continue to keep the liquidity tap turned on in order not to jeopardize the nascent recovery in various economies. What does appear to be changing is the way that management teams are running mining companies. To start with there has been significant change at the helm in most companies. To start with there has been significant change at the helm in most of the leading companies. For example, the CEOs at the world's four largest mining companies (BHP Billiton, Rio Tinto, Anglo American and Xstrata) are all new to the role. They have in general given a commitment to shareholders that they will focus on reducing operating costs and capital investment, MAA is off the agenda and increased returns to shareholders are their top priority. We believe that not only are these moves necessary but if delivered they should help rebuild trust between the shareholders and management teams.

During the bull market for commodities, the urge for mining companies to grow volume became overwhelming. Decisions were taken to build increasingly complex projects in ever more remote locations and, as a result, they tended to have capital intensities well above historic levels. In addition, these projects were often in frontier countries or had grades below average industry levels. These factors have meant a significant portion of the industry's asset base is These factors have meant a significant portion of the industry's asset base is now unlikely to generate competitive returns at consensus forecasts for long term commodity prices. With the focus now on cutting capital expenditure, we are seeing projects being deferred as the low return on investment and the risks of undertaking such projects have become glaringly obvious to investors. Recent examples include BHP Billiton's Olympic Dam and Outer Harbour iron ore expansion projects, Rio Tinto's Mozambique coal development, Glencore Xstrata's Wandoan coal, Tampakan copper and Kabanga nickel projects.

In addition to falling capital expenditure we expect companies to start In addition to falling capital expenditure we expect companies to start reporting material cuts in operating costs. Reduced demand for workers (both full time and contractors) should reduce cost inflation, input costs are falling as demand for equipment falls and a drive for efficiency will all help to take costs out of the system. Few companies have stated firm targets to their shareholders but Rio Tinto last year announced a goal of taking US\$5 billion out of its cost base by the end of 2014. We are also optimistic that Glencore will be able to attain a greater amount of synergies post their takenyer of Ystrat than initially forecast. takeover of Xstrata than initially forecast.

M&A is also a victim of this new, more conservative environment. Aside from the completion of the takeover of Xstrata by Glencore in May, this has been a year in which investment bankers have had little to do. The larger companies appear to be in "sell" mode rather than seeking to acquire assets. Whilst we applaud the step to simplify and remove non-core assets, the strategy certainly has some challenges. Firstly, with most companies looking to sell assets the list of buyers is limited. Secondly, with demand for assets low this is hardly the best market in which to get a good price for an asset disposal. However, if the capital can be better used (for example in buying back shares) then it is certainly the right thing to be doing.

Last year investors applied even more pressure on companies to share the profits they were making. This has resulted in a jump in total dividends being paid to shareholders and, when combined with the fall in share prices, yields paid to shareholders and, when combined with the fall in share prices, yields have risen to levels that are now competitive with other equity sectors. Looking forward it is essential that management teams do not shirk away from the stated goal of being shareholder-return focused, especially if the promised capital expenditure reduction materialises, as this should provide ample head room to keep dividends at attractive levels. The Company has certainly gone down this path, increasing the 2012 dividend paid in May of this year by 50% compared with the previous year.

The hardest hit area of the market has been the smaller capitalisation companies and, in particular, those who are full of the promise of project construction. Funding for projects has evaporated as bank lending contracted and investor enthusiasm for equity raisings has disappeared. The end result is that the option value of these growth projects has been rightly discounted, in some cases to virtually zero. This area of the market has never been a core part of the Company and as such we have escaped the worst of the moves. However, as mentioned earlier, the rest of the market has been caught in the overall contagion.

Selected commodity price changes

Commodity	Price 28 June 2013	% change over six months to 28 June 2013	
Lead US\$/1b	0.93	-11.9	+6.7
Tin US\$/lb	8.90	-16.1	+3.4
Platinum US\$/oz	1,317.00	-13.8	-0.1
Zinc US\$/lb	0.83	-11.2	-2.2
Iron Ore 62.5% Fines US\$/t	136.77	-19.6	-2.7
Copper US\$/lb	3.05	-14.9	-6.8
Gold Bullion US\$/oz	1,215.40	-26.9	-7.7
Aluminium US\$/lb	0.78	-15.3	-7.8
Nickel US\$/lb	6.19	-19.7	-12.3
Silver US\$/oz	18.86	-37.0	-14.0
Thermal coal (Newcastle) US\$/t	78.90	-14.5	-14.8

Coking Coal US\$/t	131.00	-18.1	-29.4

Sources: DataStream, Bloomberg and Macquarie. All spot prices.

The first half of 2013 saw base metal prices move lower after the rally into the close of 2012. The worst performer was nickel which posted a decline of just under 20% for the first six months of the year. Nickel did not suffer alone: all of the other base metals declined in excess of 10%, although the situation is slightly less alarming when looked at on the more important metric of using the average price for the half versus the prior period. On this basis, the prices of lead and tin were actually up compared with the previous six months and copper was only down by 3.5% in US dollar terms.

For the producers, these prices will no doubt lead to a lower set of earnings

and will most probably not make for good headlines at the mid-year point. However, with all of the base metal prices, except copper, trading well below the 90th percentile of their respective cost curves we are now in the realm of cost driven support. Despite seeing limited further downside in these metal prices the Company continues to have minimal direct exposure to the producers of these metals.

The Company's main base metal exposure is to copper producers and despite the near 7% fall in the average copper price over the first six months of 2013 versus the first half 2012, operating margins on the whole remain healthy. The versus the first half 2012, operating margins on the whole remain healthy. The relative stability in margins has been overshadowed by stock specific events for the Company's major copper holdings. Freeport McMoRan completed its unpopular deal in the oil and gas sector which seems to have generated an overhang in the shares whilst the market waits to see if it will be successful. First Quantum completed its hostile takeover of Inmet, but again some market judgement is being reserved until it is clear how the company will deal with the combination of increased balance sheet gearing and a higher level of future company is a large corporation of increased balance sheet gearing and a higher level of future specified. the combination of increased balance sheet gearing and a higher level of future capital spending in a lower copper price environment. Antofagasta, having first announced the suspension of its key growth project, Antucoya, due to the rapid escalation in capex, restarted construction following a review by management just ahead of the most recent decline in the copper price. Finally, after providing a boost to performance last year, Discovery Metals failed to meet its production targets and the bidder, Cathay Fortune Corporation from China, withdrew its offer. In the aftermath, the share price fell sharply in light of the poor operating performance and need for additional capital.

Gold and precious metals

Gold and precious metals
Gold and silver had a traumatic first half of the year, falling 27% and 37%
respectively in US dollar terms. A perfect storm of a strengthening US economy,
a lack of inflationary pressures, the possible end to quantitative easing
by the Federal Reserve and the precedent-setting news that Cyprus' central bank
may be a forced seller of part of its (tiny) gold holding, led to a significant
shift in sentiment away from the yellow metal. A rapid liquidation of
speculative length in the futures market in April saw the largest two day fall in the gold price for thirty years. This was followed by a further sharp reduction in June, taking non-commercial positions to their lowest level since 2002. The amount of gold held in physically-backed Exchange Traded Funds reduced from 89 million ounces at the start of the year, to 71 million ounces by the end of June.

Whilst financial investor appetite for gold waned, physical demand from whilst inhalical investor appetite for gold wanted, physical demands from elsewhere has significantly picked up as prices have fallen. Even before the sharp fall in April, imports of gold into China during March were up markedly. Following the fall, Indian purchases of physical gold surged; the US mint announced it had suspended the sale of its American Eagle gold coins after it ran out as demand tripled in April compared with the previous month and images of jewellery shops stripped bare in China made the newspapers. This dislocation between financial market investors and other physical sources of demand reveals an encouraging level of pent-up demand that had been looking for an entry point into gold. This would suggest that once market equilibrium is reached, there is an appetite for gold as a store of value that should allow it to re-establish its upward trajectory.

For the gold equities, the falls in share prices have been precipitous. As with the broader mining industry, the gold sector has faced significant cost inflation as previous management teams chased growth at all costs. This meant that by the end of 2012 we estimated that the industry had an all-in cost, taking into account operating costs, capital costs, overheads, and exploration, of approximately US\$1,400/oz. The sharp fall in the gold price has left the industry reeling as companies have rapidly moved into negative free cash flow. In addition, the sector is facing significant balance sheet write-downs as acquisitions and increases in reserves and resources over the last three years will have assumed a higher gold price than today. The share price of the world's largest gold producer, Barrick, more than halved over the period under review due to its above-average cost structure, high level of debt and review due to its above-average cost structure, high level of debt and negative news flow around its flag-ship growth assets in the Dominican Republic and Chile. The Company has generally held minimal amounts of the larger gold producers such as Barrick and Newmont for sometime now. The Company's largest precious metal position is through its combined exposure to Industrias Penoles and its subsidiary Fresnillo. The latter is a high quality FTSE 100 listed silver-gold producer with a strong balance sheet and due to its low cost base remains strongly free cash flow positive in the current precious metal price

Platinum and palladium prices outperformed gold and silver, falling 13.8% and 8.7% respectively. The South African platinum industry continues to face a structurally challenging operating environment and profitability remains historically low. A unionised labour force and the high degree of political sensitivity around the impact of production cuts on employment make it difficult to see how the industry can improve returns. A weakening currency has in recent weeks provided some respite for the platinum producers; however, this will only act to defer the much needed change that should be undertaken. The Company has further reduced its exposure to the platinum sector and is now underweight relative to its benchmark.

Diversified mining and industrial metals

Diversified mining and industrial metals
The diversified miners outperformed the sector as a whole in the first half of
the year but the spread in performance of the individual companies was
significant. Of the UK listed major mining companies, BHP Billiton was the best
performer, falling only 5.5% in sterling terms, as its higher level of
commodity diversification, particularly to the oil and gas sector, makes it the
most defensive of the "big four". Anglo American was the worst performer,
falling by 33%, owing to poorer levels of profitability, higher balance sheet
gearing exposure to South African platinum and continued challenges at its falling by 33%, owing to poorer levels of profitability, higher balance sheet gearing, exposure to South African platinum and continued challenges at its Minas Rio iron ore development project. Glencore completed its acquisition of Xstrata in May 2013 following approval from the Chinese authorities, making it our third largest holding. The company has indicated that there will be major cost synergies within the combined entity as well as changes to future capital expenditure that could significantly improve shareholder returns and we look forward to management providing more detail on this in due course. In January, the Company switched out of the Glencore convertible bond into the equity due to the premium at which the bond was trading relative to the underlying share

The Company's largest holding is in Rio Tinto owing to its strong balance sheet and low cost operations, particularly in iron ore. The price of iron ore over the first half of the year averaged 17.4% higher than the previous six months

and was down less than 3% versus the first half of 2012. This comparatively strong performance was the result of relatively robust demand from China's steel industry even despite economic data for the country coming in below market expectations. However, there is an increasing degree of caution over the outlook for iron ore given the slower rate of Chinese economic growth and the sustainability of the current level of fixed asset investment in the country and its implications for the future growth of steel demand. This has led to questions being raised over the rationale behind Rio Tinto's potential expansion to 360mtpa of iron ore production by 2015, as the impact of this extra volume entering the system at a time when the market looks to be in balance could have a detrimental impact on the overall returns of their iron ore business. For Rio Tinto and other large producers, staggering production growth over a longer period of time may in fact generate better incremental returns on capital and at the same time avoid taking on further debt.

Metallurgical coal, another major input for the Chinese steel industry, fared much worse with average prices for the first half of this year down over 29% compared with the first half of 2012. The market for sea-borne metallurgical coal was negatively impacted by the removal of infrastructure bottlenecks in China which reduced the need for imported coal. Thermal coal prices stabilised over the first half but still remain 15% below the average level in the first half of 2012. The combination of low international prices, higher US gas prices and production cuts from US producers, meant growth in US export volumes into the Pacific Basin market was limited. In both cases, prices are now eating well into the production cost curve, although Australian coal producers should see the Pacific Basin market was limited. In both cases, prices are now eating well into the production cost curve, although Australian coal producers should see the benefit of increased productivity and a weakening currency improve their cost competitiveness in coming months. The Company has no direct exposure to pure-play coal producers but is exposed indirectly to metallurgical coal through its position in Teck Resources. The company is the world's second largest metallurgical coal producer, a significant producer of copper and zinc, and has one of the strongest balance sheets in the industry. It remains a significant holding of the Company.

After a poor year in 2012, mineral sands producers have outperformed the mining sector during the first half of 2013. Prices for ilmenite and zircon (used in pigments and ceramics respectively) have stabilised while demand out of China, the largest consumer, has normalised after a period of heavy destocking. This has allowed Iluka, the largest producer of zircon globally and a top ten holding in the Company, to increase volumes through the second quarter. As a result, the share price of Iluka has started to reverse the negative impact it had on performance during 2012.

Unlisted investments

Unlisted investments
Marampa Royalty Contract (7.8% of the portfolio): In July 2012, the Company purchased a 2% revenue royalty calculated on any iron ore sales over the life of the Marampa mine in Sierra Leone, owned by London Mining plc. To the end of June, the Company has now received three quarterly payments from London Mining since the royalty was purchased. At an operational level, the asset continues to ramp-up in line with our expectations and is on target to reach a 5mtpa run rate by Q4 2013. Royalty payments are expected to increase markedly as production reaches 5mtpa with further potential to expand to 9mtpa.

Banro Gold-Linked Preference Shares (1.9% of the portfolio): In April 2013, the Banno Gold-Linked Preference Shares (1.9% of the portfolio): In April 2013, the Company purchased a US\$30 million gold-linked preference share from Banno Corporation. The Company's investment occurred alongside an equity issue by the company taking the total financing package to US\$100 million to fund development costs of its second asset, Namoya, as well as working capital. The gold-linked preference share provides exposure to the gold price as well as volume growth with the principal moving in line with the gold price and the coupon ranging between 10-15% depending on Banno's production. Banno Corporation is currently in ramp-up with the expansion to 1.7mtpa at Twangiza on track for Q4 2013 taking production to 120koz in 2014. Their second asset, Namoya, is expected to commence production at the end of 2013 with 2014 production to range between 90-110koz.

The Company from time to time enters into derivatives contracts, mostly involving the sale of "puts" and "calls". These are taken to revenue and are subject to strict Board guidelines which limit their magnitude to an aggregate 10% of the portfolio.

At 30 June 2013, the Company had £89.8 million (30 June 2012: £100.2 million; 31 December 2012: £86.4 million) of net debt.

In the annual report we wrote that we felt this year might be one in which the sector moved more on fundamentals and less on the gyrations of markets around fiscal policy and financial crises. To date we have been wrong. Changes in expectations over the rate of Chinese economic growth, as well as concerns over when monetary policy will start to tighten, have generated speculation on the impact on commodity prices in the future. This in turn has led to aggressive falls in mining company share prices as they reflect the market's nervous outlook for metal prices. In addition, the arrival of new supply from projects that have moved from development and into production is taking some markets into surplus.

However, from a macro perspective things are looking reasonably positive. The world's largest and second largest consumers of commodities (China and the US) are seeing synchronous growth in demand for many commodities. Elsewhere, the in Europe looks set to have stabilised for the time being and are bright spots for demand in other areas such as India, Brazil and Indonesia.

At the time of writing we await company results for the first half of the year. Despite the overall volatility in share prices, average metal prices for key holdings in this half of the year relative to the previous period have been comparatively stable. As such, margins for key holdings should have remained at healthy levels, and with the expectation of cost cutting and some currency tailwinds in the second half, we remain confident that the outlook should be supportive to share prices from this point onwards. We are also watching balance sheets extremely closely due to the fact that metal prices are starting the second half at markedly lower levels than they started the year and this could easily present a number of opportunities.

continue to review a number of new investments in the royalty area. With the aks unwilling to finance many of the growth companies in the sector we are confident that now we have authority from shareholders, a range of exciting new holdings could be added to this part of the portfolio.

Evy Hambro and Catherine Raw BlackRock Investment Management (UK) Limited 21 August 2013

Ten Largest Investments 30 June 2013

Rio Tinto* - 11.5% (2012: 10.1%) is the world's third largest mining company by warket cap. It has interests over a broad range of metals and minerals including iron ore, aluminium, copper, coal, industrial minerals, gold and uranium. In January, the company announced impairment charges of circa US\$14 billion on its aluminium assets and Mozambican coal assets, which resulted in the CEO stepping down and being replaced by Sam Walsh, the head of their iron

BHP Billiton - 10.8% (2012: 9.4%) is the world's largest diversified natural resource company, formed in 2001 from the merger of BHP and Billiton. The company is an important global player in a number of commodities including iron ore, copper, coal, manganese, aluminium, diamonds and uranium. The company is the only sizeable holding in the portfolio with significant oil and gas assets. The last six months has seen the company complete the divestment of a number of non-core assets for US\$2.3 billion and the company has signalled for more to follow as they streamline the business and reinforce the balance sheet.

Glencore Xstrata - 10.1% (2012: 9.1%) was formed as a result of the merger between Glencore and Xstrata that completed in early May. The combined group is a major producer of copper, coal, nickel and zinc, as well as having a market-leading commodities trading business. The company has the strongest 3 year forecasted production volume growth of the London-listed major mining companies. During the merger process it outlined US\$500 million of operating superging which will be the representation. synergies which will be the responsibility of Ivan Glasenberg, who was previously the Glencore CEO, to deliver.

First Quantum Minerals* - 8.3% (2012: 4.4%) is an integrated copper producer whose principal operating assets are in Africa, but also with nickel assets in Australia and Finland. In April it concluded a deal to buy Inmet Mining, a Canadian listed company with operating copper assets in Europe and a significant development project in Panama. The company aims to apply its inhouse development expertise to this project to improve the return profile on a potential 300,000 tonne per annum producer with a reserve life already in excess of 30 years.

First Quantum Debt (3.6%) is a corporate bond originally issued by Inmet to fund the development of Cobre Panama. The bond has a coupon of 8.75% and matures in 2020

Marampa Royalty Contract# - 7.8% (2012: 5.1%) is a 2% revenue-related royalty calculated on any iron ore sales over the life of the mine from London Mining calculated on any iron ore sales over the life of the mine from London Mining Plc's Marampa mine in Sierra Leone. The royalty is payable quarterly in arrears calculated on the amount receivable at the relevant point of sale, currently calculated with reference to the net freight on board price received from sales of iron ore in Sierra Leone (terms similar to that of the existing royalty payable to the Government of Sierra Leone). The Company received its first royalty payment in the fourth quarter of 2012 and will receive quarterly payments going forward. Payments will initially be small owing to the gradual ramp-up to full capacity but we expect these to increase markedly post 2014 as production reaches 5mtpa; there is then potential to expand to 9mpta.

Freeport McMoRan - 5.8% (2012: 3.8%) is the world's second largest copper producer, accounting for 9% of global mined copper production annually. It is also a major producer of gold and molybdenum from mines in North and South America, as well as Indonesia and the DRC. In the second quarter of 2013 it completed the acquisition of Plains Exploration & Production as well as McMoRan completed the acquisition of Plains Exploration & Production as well as McMoR. Exploration as the company looked to diversify into oil and gas in the US and Gulf of Mexico. During the first half of the year, its Grasberg mine in Indonesia, which contains the world's largest recoverable copper and gold reserves, had a fatal underground accident that led to a temporary closure of

Antofagasta - 3.0% (2012: 3.0%) is a Chilean-based copper mining company listed in London. In 2012 its operations produced in excess of 700,000 tonnes of copper, almost 300,000 ounces of gold and over 12,000 tonnes of molybdenum. The company has developed a strong reputation for returning excess cash to shareholders and paid 98.5c in dividends (ordinary and special) in the last year, a yield of almost 8%.

Iluka Resources - 2.9% (2012: 2.2%) is an Australian based producer of mineral sands, with the majority of its revenue derived from zircon. Zircon is used in ceramics and is a relatively opaque market that has a small number of ceramics and is a relatively obaque market that has a small number of relatively large producers, of which Iluka is one. 2012 was challenging environment for the commodity as demand growth stalled in China, inventories rose and prices fell sharply. Iluka has responded to this by reducing production and aggressively cutting costs. Given the weaker markets, it reducits dividend but still paid out A\$0.35 per share, representing a 3.33% yield.

Industrias Penoles - 2.8% (2012: 3.9%) is Mexico's second largest mining company and an integrated producer of non-ferrous metals. It is the country's largest producer of zinc and lead, as well as silver and gold through its subsidiary Fresnillo. The company's history dates back to 1887 and the shares have traded on the Mexican stock exchange since 1968.

Fresnillo - 2.7% (2012: 4.1%) is the world's largest primary silver producer and Mexico's second largest gold producer. The company has three producing operations and a portfolio of high quality development and exploration projects. Industrias Penoles, one of Mexico's leading mining companies, owns 77% of the company; the remainder is publicly listed on the London Stock Exchange.

- * Includes fixed interest securities.

The total column of this statement represents the Consolidated Statement of Comprehensive Income, prepared in accordance with International Financial Reporting Standards ("IFRS"), as adopted by the European Union ("EU"). The supplementary revenue and capital columns are both prepared under guidance published by the Association of Investment Companies ("AIC"). All items in the above statement derive from continuing operations. No operations were acquired or disposed of during the period. All income is attributable to the equity holders of BlackRock World Mining Trust plc. There were no minority interests. The final dividend of 14.00p per share in respect of the year ended 31 December 2012 was declared on 19 February 2013 and paid on 2 May 2013. This can be found in the Consolidated Statement of Changes in Equity for the six months ended 30 June 2013. The net loss for the Company for the period was £344,737,000 (six months ended 30 June 2012: loss of £133,952,000; year ended 31 December 2012: loss of £64,031,000). The Group does not have any other recognised gains or losses. The net return for the period disclosed above represents the Group's total comprehensive income.

Notes to the Half Yearly Financial Statements

1. Principal activity and basis of preparation
The principal activity of the Company is that of an investment trust company
within the meaning of sub-sections 1158-1165 of the Corporation Tax Act 2010.

The principal activity of its subsidiary, BlackRock World Mining Investment Company Limited, is investment dealing.

The half yearly financial statements have been prepared using the same accounting policies as set out in the Group's Annual Report and Financial Statements for the year ended 31 December 2012 (which were prepared in accordance with International Financial Reporting Standards ("IFRS") as adopted by the EU and applied in accordance with the provisions of the Companies Act 2006) and in accordance with International Accounting Standard 34, 'Interim Financial Reporting'. Insofar as the Statement of Recommended Practice ("SORP") for investment trust companies and venture capital trusts issued by the Association of Investment Companies ("AIC"), revised in January 2009 is compatible with IFRS, the financial statements have been prepared in accordance with guidance set out in the SORP.

2. Income

Registrar's fees and other administrative			
costs	280	172	404
Directors' emoluments	57	57	119
	442	431	902

Expenses charged to capital include £nil (six months ended 30 June 2012: £198,000; year ended 31 December 2012: £198,000) paid to the auditor relating to tax and structuring services and £nil (six months ended 30 June 2012: £424,000; year ended 31 December 2012: £568,000) paid to legal and corporate finance advisers relating to advice provided for a proposed but not completed corporate acquisition.

5. Dividends

Dividends of 14.00p per share for the year ended 31 December 2012 was paid on 2 May 2013. The Board has declared an interim dividend of 7.00p per share for the period ended 30 June 2013 and will be paid on 26 September 2013 to shareholders on the register on 30 August 2013. This dividend has not been accrued in the financial statements for the six months ended 30 June 2013, as under IFRS, interim dividends are not recognised until paid. Dividends are debited directly to reserves.

At 1 January 2013 and 30 June 2013	177,287,242	15,724,600	193,011,842	9,651

8. Transactions with the Investment Manager

The related party transaction with BlackRock is set out in note 3. The fee due to the Investment Manager for the six months ended 30 June 2013 amounted to £6,115,000 (six months ended 30 June 2012: £8,113,000; year ended 31 December 2012: £16,185,000). At the period end, £14,211,000 was outstanding in respect of investment management fees (six months ended 30 June 2012: £8,113,000; year ended 31 December 2012: £8,096,000).

9. Related party disclosure

9. Related party disclosure
The Board currently consists of five non-executive Directors all of whom are
considered to be independent by the Board. None of the Directors has a service
contract with the Company. The Chairman receives an annual fee of £30,000, the
Chairman of the Audit and Management Engagement Committee receives an annual fee of £25,000, and each of the other Directors receive an annual fee of

All five members of the Board hold shares in the Company as set out below:

	Ordinary shares 30 June 2013	Ordinary shares 21 August 2013
A W Lea	6,000	6,000
I C S Barby	25,000	25,000
O A G Baring	3,000	3,000
C A M Buchan	24,000	24,000
D W Chevne	4.000	4.000

10. Contingent liabilities

There were no contingent liabilities at 30 June 2013 (30 June 2012: nil; 31 December 2012: nil).

11. Publication of non-statutory accounts
The financial information contained in this half yearly financial report does not constitute statutory accounts, as defined in section 435 of the Companies Act 2006. The financial information for the six months ended 30 June 2013 and 2012 has not been audited.

The information for the year ended 31 December 2012 has been extracted from the latest published audited financial statements which have been filed with the Registrar of Companies. The report of the auditor on those financial statements contained no qualification or statement under sections 498(2) or (3) of the Companies Act 2006.

The Board expects to announce the annual results for the year ended 31 December 2013 in mid February 2014. Copies of the results announcement can be obtained from the Secretary on 020 7743 3000. The annual report should be available by the end of February 2014, with the Annual General Meeting being held in May 2014.

21 August 2013

Independent Review Report to BlackRock World Mining Trust plc

We have been engaged by the Company to review the condensed set of financial statements in the half yearly financial report for the six months ended 30 June 2013 which comprises the Consolidated Statement of Comprehensive Income, Consolidated Statement of Changes in Equity, Consolidated Statement of Financial Position, Consolidated Cash Flow Statement, Reconciliation of Net Income before Taxation to Net Cash Flow from Operating Activities, and the related notes. We have read the other information contained in the half yearly financial report and considered whether it contains any apparent misstatements or material inconsistencies with the information in the condensed set of financial statements.

This report is made solely to the Company in accordance with guidance contained in International Standard on Review Engagements (UK and Ireland) 2410 "Review of Interim Financial Information Performed by the Independent Auditor of the Entity" issued by the Auditing Practices Board. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company, for our work, for this report, or for the conclusions we have formed.

Directors' responsibilities

The half yearly financial report is the responsibility of, and has been approved by, the Directors. The Directors are responsible for preparing the half yearly financial report in accordance with the Disclosure and Transparency Rules of the United Kingdom's Financial Conduct Authority

As disclosed in note 1, the annual financial statements of the Group are As disclosed in note 1, the annual linancial statements of the Group are prepared in accordance with International Financial Reporting Standards ("IFRS") as adopted by the European Union. The condensed set of financial statements included in this half yearly financial report has been prepared in accordance with International Accounting Standard 34, "Interim Financial Reporting", as adopted by the European Union.

Our responsibility

Our responsibility is to express to the Company a conclusion on the condensed set of financial statements in the half yearly financial report based on our

Scope of review

Scope of review
We conducted our review in accordance with International Standard on Review
Engagements (UK and Ireland) 2410, "Review of Interim Financial Information
Performed by the Independent Auditor of the Entity" issued by the Auditing
Practices Board for use in the United Kingdom. A review of interim financial
information consists of making enquiries, primarily of persons responsible for
financial and accounting matters, and applying analytical and other review
procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing (UK and Ireland) and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

Based on our review, nothing has come to our attention that causes us to believe that the condensed set of financial statements in the half yearly financial report for the six months ended 30 June 2013 is not prepared, in all material respects, in accordance with International Accounting Standard 34 as adopted by the European Union and the Disclosure and Transparency Rules of the United Kingdom's Financial Conduct Authority.

Ernst & Young LLP 21 August 2013

The Half Yearly Financial Report will also be available on the BlackRock Investment Management website at www.blackrock.co.uk/brwm. Neither the contents of the Manager's website nor the contents of any website accessible from hyperlinks on the Manager's website (or any other website) is incorporated into, or forms part of, this announcement.
