

**Aims**

Objective: The investment strategy of the fund is to purchase units in the M&G PP Positive Impact fund (the underlying fund).

Underlying fund objective: The fund has two aims: To provide a higher total return (the combination of capital growth and income), net of the Ongoing Charges Figure, than the MSCI ACWI Index over any five-year period; and To invest in companies that aim to have a positive societal impact through addressing the world's major social and environmental challenges. The fund gains its exposure through the M&G Positive Impact Fund, an M&G OEIC. The fund is a concentrated portfolio of global stocks, usually holding fewer than 40 stocks, investing over the long term in companies that make a positive social and/or environmental impact alongside a financial return, using a disciplined stock selection process. Sustainability and impact considerations are fundamental in determining the fund's investment universe and assessing business models. The fund embraces the United Nations Sustainable Development Goals framework and invests in companies focused on areas including climate action, pollution reduction, circular economy, health and wellbeing, education and innovation, and working conditions. The fund invests in three categories of positive impact companies: "Pioneers", whose products or services have a transformational effect on society or the environment; "Enablers", which provide the tools for others to deliver positive social or environmental impact; and "Leaders", which spearhead the development of sustainability in their industries. Investing in these categories provides diversification across industries and maturity of business models. Dialogue with the companies in which the fund invests is fundamental to the investment approach. The objective is to support and influence their contribution to the world's major social and environmental challenges. The fund manager has discretion to invest in companies with limited exposure to fossil fuels but which are driving or significantly participating in the transition to a more sustainable economy. The fund may also invest in other transferable securities, cash, and near cash, directly or via collective investment schemes (including funds managed by M&G). Derivatives may be used for Efficient Portfolio Management and hedging.

--------------------------------	--

**Important Information**

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).

**Prudential Risk Rating**

**Medium to Higher Risk**

These funds offer a diverse geographical spread of equity investment or have multi-asset strategies with a specialist focus (e.g. ethical). The equity funds within this category will have greater overseas exposure and underlying volatility than the "medium" sector.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

## Commentary

Performance as at Q1 2024 - Stock selection had a negative impact on relative returns, particularly in the technology and healthcare sectors. The fund's overweight to healthcare also proved detrimental to relative performance. In contrast, stockpicking in consumer discretionary and materials benefited relative returns. Key detractors from relative returns included HDFC Bank, onsemi and Grifols. In January, HDFC's share price fell steeply post the release of its Q3 results. These reflected a slowdown in deposit growth. Grifols share price also tumbled at the start of the year after hedge fund Gotham City Research raised concerns about its accounting practices. The company's lower-than expected 2024 guidance (issued in February) and another damaging report from Gotham City Research in March compounded its share price instability over the quarter. The top contributors to relative performance were Novo Nordisk and Horiba. Novo Nordisk has become one of Europe's most valuable companies following very strong demand for its weight-loss drug, Wegovy and diabetes medication, Ozempic. We are comfortable with the fund balance and have not felt a need to make major changes. The relative value of the fund now seems even clearer to us as certain parts of the market have become more stretched. As usual, we are reluctant to make definitive comments on market direction, or which styles will work in the near term. However, we note that there has been a fall in the value of the portfolio relative to the benchmark – where certain groups of large-cap stocks are looking increasingly stretched, in our view. We believe that our positive impact companies generally offer good long-term growth prospects. We note that sentiment on many stocks in both the healthcare and renewables sectors is still muted; in our opinion, this should offer a better margin of safety (the difference between the current share price and what we believe to be the intrinsic value of the company) for the portfolio as a whole.
