Aims

Objective: The investment strategy of the fund is to buy units in the WS Prudential Risk Managed Active 4 Fund - the underlying fund.

Underlying Fund Objective: The fund aims to achieve long-term (in excess of 5 years) total return (the combination of income and growth of capital) by investing in a mix of assets from around the world and aims to limit the average volatility per annum over rolling 5 year periods to 14.5%. There is no guarantee the objective will be achieved over any time period and the actual volatility, at any time, may be higher or lower than 14.5%. Capital invested is at risk.

Important Information

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).
- Source of portfolio data: Broadridge. Source of performance data: FE fundinfo. We can't predict the future. Past performance isn't a guide to future performance. The figures shown are intended only to demonstrate performance history of the fund, after allowing for the impact of fund charges and further costs, but take no account of product charges, or any Annual Management Charge paid for by the deduction of units. Charges and further costs may vary in the future and may be higher than they are now. Fund performance is based upon the movement of the daily price and is shown as total return in GBP with net income reinvested. The value of your client's investment can go down as well as up and the amount your client gets back may be less than they put in.

December 2025 Investment Summary

A positive month for the Active range with returns ranging from 0.01% for Active 1 to 0.71% for Active 5.

*P Acc share class with data sourced from FE analytics as at 31 December 2025.

December saw mid-month volatility, but ended positively for markets and portfolios.

Major equity markets saw volatility driven by concerns over AI valuations and spending plans, alongside hawkish Fed guidance, before a late month rally. Emerging market equities saw mixed returns, South Korea and Taiwan extended their extraordinary runs, in contrast India and Brazil pulled back. Japanese stocks edged up, driven by expectations of continued economic stimulus. Gains shifted from exporters to domestic sectors like services and transport. The FTSE 100 returned +2.3% delivering on the seasonal promise of a Santa rally, while the Stoxx 600 gained +2.8%, led by Basic Materials, Financial Services and Consumer Staples. The S&P 500 was virtually flat (+0.1%) but Nasdaq fell -0.5%, amid tech valuation concerns. Sector level performance saw Financials, Industrials and Materials gain, while Utilities and Real Estate fell.

The US eased trade tensions with China, as they approved the sale of Nvidia's advanced H200 chips to China. Meanwhile, China imposed tariffs of up to 42.7% on certain dairy products from the EU, increasing tensions between Brussels and Beijing and follows on from the EU's new tariffs on Chinese electric vehicles.

The US Central Bank closed with a third rate cut of the year, to 3.50%, their lowest level since 2022. The move was widely anticipated, but highlighted fractures in the Federal Reserve over prioritising tackling a weakening jobs market or high inflation. Three of twelve central bankers objected to the quarter point cut, the largest number of dissenters since 2019. The cut coincided with a first inflation report since the US Government shutdown, and printed much lower at 2.7%, compared with analyst expectations of 3.1%. This contributed to a sell off in Treasuries, but needs to be taken with a pinch of salt, in light of data collection issues resulting from the shutdown.

The Bank of England followed suit, reducing rates by a quarter point to 3.75%, responding to signs of stagnation and cooling inflation. Messaging from Governor Bailey was less dovish than anticipated, given reduced inflationary pressures and increasing unemployment. Inflation eased to 3.2% in November and unemployment climbed to a four-year high of 5.1% in the three months to October. The European Central Bank held rates, with murmurings of the next change to the rate potentially being a hike. The Bank of Japan continued on their path of policy normalisation with a 0.25% rate hike, causing both 10yr and 30yr JGB yields to hit multi-decade highs.

Precious metals performed spectacularly well through 2025, with both gold (+65%) and silver (+148%) prices - their strongest annual gains since 1979. This year moves were driven by lower policy rates from central banks, geopolitical uncertainty, future inflation concerns (given high public debt burdens), and central banks diversifying their own reserves.

Markets remain sensitive to economic data and geopolitics, with volatility clustering around key announcements. Diverging inflation paths and uneven growth are driving asymmetric central bank policies, adding complexity and dispersion across assets and regions in the months ahead.

WS Prudential Risk Managed Active - Tactical asset allocation activity

The Fund Managers maintain their equity overweight of +2.25%, made up of a basket of US (S&P 500 and Nasdaq), Asia, Europe and GEM. We hold overweight positions in US Treasuries and UK Gilts with underweights in US and European Corporate bonds.
