

**Aims**

The fund aims to deliver long term growth through investing in a diversified range of assets both in the UK and globally. At any time, the fund will invest at least 60% of its assets in equities but may invest up to 100%. Investments are managed across asset classes and across world markets with a focus on long run investment potential as forecast on a rolling 10 years basis. The fund may invest in a range of permitted assets which include equities, bonds, property and cash accessed directly or indirectly via appropriate fund vehicles. The fund may include other assets as deemed appropriate by both the manager and current regulations.

**Prudential Risk Rating**

**Medium Risk**

These funds may invest in multi-asset strategies with a higher weighting in equities (or with significant derivative use), while funds investing mainly in property, high yield or government bonds (such as UK Gilts) are also in this category.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

**Manager for:** 9 years, 6 months 9 years, 6 months 9 years, 6 months

**Important Information**

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).
- Source of portfolio data: Broadridge. Source of performance data: FE fundinfo. We can't predict the future. Past performance isn't a guide to future performance. The figures shown are intended only to demonstrate performance history of the fund, after allowing for the impact of fund charges and further costs, but take no account of any Annual Management Charge paid for by the deduction of units. Charges and further costs may vary in the future and may be higher than they are now. Fund performance is based upon the movement of the daily price and is shown as total return in GBP with gross income reinvested. The value of your client's investment can go down as well as up and the amount your client gets back may be less than they put in.
- This factsheet is intended for the advisers of occupational pension schemes using Prudential group pension contracts and Prudential grouped personal pensions and Stakeholder pension contracts. Its purpose is to provide an insight into how investment markets and funds have performed over the period and is provided for information only. You should refer to your client's scheme documentation (e.g. Fund Guide) for fund availability, investment strategy, any scheme information and charges. Every care has been taken in populating this output, however it must be appreciated that neither Broadridge, Prudential nor their sources guarantee the accuracy, adequacy or completeness of this information or make any warranties regarding results from its usage.

Registered number 992726. Authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority.

## Commentary

Performance as at Q2 2024 - Initial worries about seemingly persistent inflation gave way to a more positive environment for global equities as investors increasingly anticipated cuts to interest rates. The European Central Bank (ECB) cut rates in June, while the US Federal Reserve indicated that further hikes were unlikely. Global equity markets gained in the second quarter, but bonds largely struggled over the three months as Sovereign bonds encountered challenges, amid some investor concerns over the pace of interest rate cuts and political uncertainties. The funds advanced in the quarter on an absolute basis. Emerging markets and US equity were among the strongest performing areas, while Japan declined, all in sterling terms. As well as positive sentiment on the back of the greater likelihood of interest rate cuts in the near term, optimism regarding artificial intelligence (AI) and related technology companies also provided a boost to US equities. In the UK, inflation reached the Bank of England's (BoE) target level, raising hopes for a rate cut in the summer. The prospect of a widely predicted outcome to the UK's general election in early July was broadly welcomed by investors. The Japanese yen weakened notably over the quarter, leading to an erosion in returns for sterling-based investors. Corporate bonds broadly outperformed government debt in the quarter. For the second consecutive quarter, riskier high yield bonds were among the best performers. market observers adjusted their expectations for the path of interest rates to a more gradual pace of rate cuts. Tactically, we retain an above-index allocation to equities funded from a net below-index fixed income position and cash, which added positively over the quarter as equities outperformed bonds. In a series of tactical moves, we first reduced the allocation to Chinese equities (to a neutral position relative to the index), due to fading sentiment regarding China's economic stimulus measures. Later in the period we reduced the position in European equities (to a neutral position relative to the index), owing to increased political risk and the possibility of instability in France stemming from the recent election. The allocation to UK equities was taken from neutral to an above-index position.
