**Aims**

Objective: The investment strategy of the fund is to buy units in the WS Prudential Risk Managed Passive 3 Fund - the underlying fund.

Underlying Fund Objective: The fund aims to achieve long-term (in excess of 5 years) total return (the combination of income and growth of capital) by investing in a mix of assets from around the world and aims to limit the average volatility per annum over rolling 5 year periods to 12%. There is no guarantee the objective will be achieved over any time period and the actual volatility, at any time, may be higher or lower than 12%. Capital invested is at risk.

**Performance**

**Important Information**

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).
- Source of portfolio data: Broadridge. Source of performance data: FE fundinfo. We can't predict the future. Past performance isn't a guide to future performance. The figures shown are intended only to demonstrate performance history of the fund, after allowing for the impact of fund charges and further costs, but take no account of product charges, or any Annual Management Charge paid for by the deduction of units. Charges and further costs may vary in the future and may be higher than they are now. Fund performance is based upon the movement of the daily price and is shown as total return in GBP with gross income reinvested. The value of your client's investment can go down as well as up and the amount your client gets back may be less than they put in.

## Commentary

The following commentary is for the underlying OEIC which the fund invests into:

### March 2025 Investment Summary

A negative month for the Passive range with returns ranging from -1.58% for Passive 5 to -1.12% for Passive 1.

\*P Acc share class with data sourced from FE analytics as at 31 March 2025.

March 2025 was a tougher month for the portfolios in absolute terms.

Most major equity markets fell, with Emerging Markets outperforming and supported by a positive return from the Hang Seng, as Chinese advances in AI continued to be viewed optimistically by investors. The FTSE 100 dropped 2.0%, after pessimistic data releases for GDP growth and retail sales. The Stoxx 600 reduced 3.7% influenced by new US trade tariffs, but healthcare and consumer staple stocks held up better. The S&P 500 decreased 5.6% and Nasdaq fell 8.1%. Sector performance saw only utilities rise with the largest falls seen in healthcare and technology. Market uncertainty around AI-heavy technology names and tariff-driven inflation impacts saw investors continue to rotate out of US equities into cheaper valued European and Chinese equities.

Tariff fears maintained the risk off US sentiment, with 25% tariffs on Mexican/ Canadian imports taking effect at the start of March. 25% tariffs were also imposed on all steel and aluminium imports while an additional 10% tariff on Chinese goods has fuelled investor concerns of a worldwide economic slowdown and global trade war. The US market's heavy tech concentration remained under pressure, with question marks over the sustainability of large cap technology company earnings and rich valuations. 10 year US Government bond yields were range-bound through the month, ending broadly unchanged at 4.21%, with lows of 4.15% and highs of 4.36%. The Fed held interest rates in March, as officials repeated they did "not need to be in a hurry" to change rates given market uncertainty, but signalled 2 rate cuts for the rest of the year in their expectations.

March's US labour market data showed payrolls increased by 228,000, surpassing forecasts, in a sign of resilience despite the Trump administration's sweeping cuts to the governments workforce. Unemployment did increase to 4.2% from 4.1%; its highest level since November, but remains at benign levels. US consumer confidence reached its lowest level since January 2021. Households are increasingly uncomfortable about a growing list of negative economic data and trade tariff implications.

Middle East tensions remain. The Israeli military striking Beirut in Lebanon for the first time since the November ceasefire agreement, in retaliation for rockets launched at Israel and remain at five 'strategic' positions. The conflicts impact remains limited on the global economy, Brent Crude remained range-bound in the mid \$70/barrel.

The economic environment has been resilient so far but the expectation is that tariff imposition and retaliatory measures will generate global inflationary pressures and dampen global growth. We expect markets to remain volatile with further announcements to come as countries respond or seek to negotiate. The multi-asset portfolios are globally diversified across equities, fixed income and other assets. Within equities regional differentiation may continue, and investing across different regions will help manage risks.

### WS Prudential Risk Managed Passive - Tactical asset allocation activity

We maintain an equity overweight of +2.0%, made up of a diversified basket of US, UK Asia and GEM, due to a continued preference for equities and a positive view on the broad Asia region. We increased our allocation to US government bonds this week and reduced our allocation to US corporate bonds. We also hold small overweight positions in US Treasuries, UK Gilts and Real Estate (REITs).
