

Aims

Objective: The investment strategy of the fund is to purchase units in the M&G PP Fixed Interest Fund - the underlying fund.

Underlying Fund Objective: The fund invests mainly in UK government gilts. The fund is actively managed against its benchmark, the iBoxx Sterling Gilts Index. The fund can also invest in overseas government bonds and corporate bonds issues by UK and overseas companies and institutions. Exposure to short-term exchange rate movements from any overseas holdings is mitigated by hedging.

Performance Objective: To outperform the benchmark by 0.75% a year (before charges) on a rolling three year basis.

Prudential Risk Rating

Lower to Medium Risk

These funds may invest in corporate bonds or multi-asset strategies with a higher weighting in corporate bonds (and other comparable strategies).

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

You should also consider discussing your decision and the appropriateness of a fund's risk rating with an adviser.

Fund Managers

Name: Miles Tym
Manager of the underlying fund for: 12 years, 7 months

Important Information

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).
- Source of portfolio data: Broadridge. Source of performance data: FE fundinfo. We can't predict the future. Past performance isn't a guide to future performance. The figures shown are intended only to demonstrate performance history of the fund, after allowing for the impact of fund charges and further costs, but take no account of any Annual Management Charge paid for by the deduction of units. Charges and further costs may vary in the future and may be higher than they are now. Fund performance is based upon the movement of the daily price and is shown as total return in GBP with gross income reinvested. The value of your investment can go down as well as up so you might get back less than you put in.
- This factsheet is intended for the trustees, sponsors, advisers and members of occupational pension schemes using Prudential group pension contracts and Prudential grouped personal pensions and Stakeholder pension contracts. Its purpose is to provide an insight into how investment markets and funds have performed over the period and is provided for information only. If you are not familiar with any of the investment terminology included, then please contact an adviser. Investors should refer to their scheme documentation (e.g. Fund Guide) for fund availability, investment strategy, any scheme information and charges. Every care has been taken in populating this output, however it must be appreciated that neither Broadridge, Prudential nor their sources guarantee the accuracy, adequacy or completeness of this information or make any warranties regarding results from its usage.

Commentary

Performance as at Q4 2024 - Volatility in breakevens gave the manager the opportunity to close out an overweight position in index linked bonds at the beginning of the quarter and then reinstate the position later in the quarter. The trade contributed positively to the performance. The manager increased the fund's overall bias to long dated issuance, which contributed positively to performance over the quarter. During the quarter, the manager increased duration as the market weakened alongside the global rates sell off. The trade had a negative contribution to performance but is now at attractive levels given the manager's confidence in a retracement. The manager reduced the fund's exposure to bonds maturing between 20-25 years and bought into the wings of the 5 year and 30-40 year maturities. The sector remains expensive and should benefit from increased supply in the area. The Fund remains underweight in the 7-15 year fixed rate gilts versus the wings. The Fund remains overweight 30 year index linked gilts versus fixed rate gilts. Real rates are looking particularly attractive as they have sold off one for one with fixed rates gilts. The Fund is exposed to longer dated bonds versus shorter dated bonds as the yield curve has steepened up to attractive levels. The Fund is has moved to a long duration position as yields have backed up to attractive levels. Activity in the Fund continued to focus on an active stock specific relative value approach. The manager continues to position in the Fund in anomalously cheap securities along the gilt yield curve.
