

**Aims**

Objective: The investment strategy of the fund is to purchase units in the BlackRock Aquila Life World (ex-UK) Equity Index Fund - the underlying fund.

Underlying Fund Objective: The fund invests in the shares of overseas companies, according to market capitalisation weightings. Within each of those markets, the fund aims to generate returns consistent with those of each country's primary share market. The fund aims to achieve a return in line with the FTSE All-World Developed ex-UK Index.

**Prudential Risk Rating**

**Medium to Higher Risk**

These funds offer a diverse geographical spread of equity investment or have multi-asset strategies with a specialist focus (e.g. ethical). The equity funds within this category will have greater overseas exposure and underlying volatility than the "medium" sector.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

You should also consider discussing your decision and the appropriateness of a fund's risk rating with an adviser.

**Fund Managers**

**BLACKROCK**

Name: BlackRock Team Managed  
Manager of the underlying fund for: 26 years, 5 months

**Important Information**

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).

## Commentary

Performance as at Q3 2025 - The third quarter delivered positive performance across most major asset classes. Trade-related uncertainty eased as the United States reached agreements with both the European Union and Japan. Meanwhile, signs of softening in the labour market prompted the Federal Reserve to deliver its first rate cut of the year in September, accompanied by guidance pointing to further easing ahead. Emerging Market Equities led gains, buoyed by tariff relief and supportive policy measures in key markets such as China, Brazil, and India. Developed Market Equities also advanced, with Japan outperforming thanks to a weaker yen and the US-Japan trade agreement. In the U.S., a more accommodative Federal Reserve alongside resilient economic growth supported equity markets, where technology stocks continued to drive returns amid sustained enthusiasm for AI.

By contrast, Europe lagged, weighed down by negative returns from German equities and heightened volatility in France linked to political instability. Government bond performance diverged across regions. In the U.S., Treasuries delivered gains as attention shifted from inflation risks to signs of cooling in the labour market, with revised employment data pointing to a less resilient economy than previously thought. In Europe and the UK, government bonds came under pressure. Political and fiscal challenges in France and persistent inflation concerns in the UK weighed on sentiment, leading to higher yields and weaker bond returns. Japan was the clear laggard, with volatility driven by political uncertainty following the government's leadership changes and a more hawkish tone from the Bank of Japan, which pushed yields higher. Credit markets also delivered positive returns. Spreads tightened across both high yield and investment grade bonds, with U.S. high yield outperforming its European counterpart and global investment grade debt also adding to gains. Precious metals extended their strong run, with gold hitting a record high and posting its best monthly performance since 2011, supported by the Fed's shift toward rate cuts and renewed safe-haven demand amidst geopolitical uncertainty. Silver also saw notable gains.

Meanwhile, the US dollar steadied relative to other major developed market currencies after its sharp decline over the first half of the year.
