**Prudential Risk Rating**

**Medium Risk**

These funds may invest in multi-asset strategies with a higher weighting in equities (or with significant derivative use), while funds investing mainly in property, high yield or government bonds (such as UK Gilts) are also in this category.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

You should also consider discussing your decision and the appropriateness of a fund's risk rating with an adviser.

**Important Information**

- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).

## Commentary

Performance as at Q1 2022 - The first quarter of 2022 was a volatile period for fixed income markets, initially driven by concern that interest rates would need to be increased more aggressively to tackle surging inflation. The Russian invasion of Ukraine on 24 February became the dominant theme in the latter weeks of the quarter, with a surge in wheat and energy prices expected to put even further pressure on inflation. Against this backdrop, UK government bonds (gilts) delivered negative returns as the 10-year gilt yield climbed above 1.7%, reaching its highest level in since 2016. UK corporate bonds were also in negative territory with the downturn in risk appetite leading to weakness across credit markets.
