

Aims

Objective: The investment strategy of the fund is to purchase units in the M&G PP Index-Linked Passive Fund - the underlying fund.

Underlying Fund Objective: The fund invests in UK Government index-linked gilts with over five years to maturity. The fund is passively managed against its benchmark, the iBoxx UK Gilt Inflation-Linked Over 5 Years Index. Tracking this index is achieved by fully replicating the stocks in the Index.

Performance Objective: To match the performance of the benchmark as closely as possible.

Prudential Risk Rating

Medium Risk

These funds may invest in multi-asset strategies with a higher weighting in equities (or with significant derivative use), while funds investing mainly in property, high yield or government bonds (such as UK Gilts) are also in this category.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

Fund Managers

Name: Robert Burrows
Manager of the underlying fund for: 12 years, 10 months

Important Information

- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).
- Source of portfolio data: Broadridge. Source of performance data: FE fundinfo. We can't predict the future. Past performance isn't a guide to future performance. The figures shown are intended only to demonstrate performance history of the fund, after allowing for the impact of fund charges and further costs, but take no account of any Annual Management Charge paid for by the deduction of units. Charges and further costs may vary in the future and may be higher than they are now. Fund performance is based upon the movement of the daily price and is shown as total return in GBP with gross income reinvested. The value of your client's investment can go down as well as up and the amount your client gets back may be less than they put in.
- This factsheet is intended for the advisers of occupational pension schemes using Prudential group pension contracts and Prudential grouped personal pensions and Stakeholder pension contracts. Its purpose is to provide an insight into how investment markets and funds have performed over the period and is provided for information only. You should refer to your client's scheme documentation (e.g. Fund Guide) for fund availability, investment strategy, any scheme information and charges. Every care has been taken in populating this output, however it must be appreciated that neither Broadridge, Prudential nor their sources guarantee the accuracy, adequacy or completeness of this information or make any warranties regarding results from its usage.

- The Industry Classification Benchmark is a product of FTSE International Limited and has been licensed for use.
- 'Prudential' is a trading name of Prudential Pensions Limited. Prudential Pensions Limited is registered in England and Wales. Registered office at 10 Fenchurch Avenue, London EC3M 5AG. Registered number 992726. Authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority.

Commentary

Performance as at Q2 2025 - UK index-linked government bonds (index-linked gilts) rose in the second quarter of the year although they lagged returns from conventional gilts. The rise in linkers was largely due to the fall in conventional gilt yields. The yield of the 10-year UK gilt fell back from 4.7% to 4.5% by the end of the quarter while gilt prices rose by 1.9% over the period, outperforming both US Treasuries and German bunds (bond yields and prices move in opposite directions). Meanwhile, five-year breakevens fell back to 3.1% by the end of the quarter, reflecting market expectations of falling inflation rates over the next five years. The UK's Consumer Price Index (CPI) inflation rate rose to 3.4% in the 12 months to May, down from 3.5% in the 12 months to April. The Bank of England (BoE) cut interest rates by 25bps over the quarter before holding steady at 4.25%. Looking forward, the Bank maintained its language about a 'gradual and careful approach' to easing policy, and markets continue to price another cut at the August meeting as likely.
