Prudential Risk Rating

Higher Risk
 These are specialist equity funds that focus on set geographical regions or a particular type of share e.g. shares of smaller companies or those that conform to certain criteria.

These risk ratings have been developed by Prudential to help provide an indication of a fund's potential level of risk and reward based on the type of assets which may be held by the fund. Other companies may use different descriptions and as such these risk ratings should not be considered as generic across the fund management industry.

We regularly review our fund risk ratings, so they may change in the future. If, in our view, there is a material change in the fund's level of risk, for example due to a significant change to the assets held by the fund or in the way the fund is managed, we will provide information on the new risk rating. We recommend that you make sure you understand the risk rating of any fund before you invest.

Fund Managers

Name: BlackRock Team Managed
 Manager of the underlying fund for: 29 years, 8 months

Important Information

- Because of changes in exchange rates the value of your investment, as well as any money you take from it, can go down as well as up.
- Some funds may invest in 'underlying' funds or other investment vehicles. The performance of our fund, compared to what it's invested in won't be exactly the same. That can be due to additional charges, cash management (needed to help people to enter and leave our fund when they want), tax and the timing of investments (this is known as a fund's dealing cycle, it varies between managers and can be several days).

- 'Prudential' is a trading name of Prudential Pensions Limited. Prudential Pensions Limited is registered in England and Wales. Registered office at 10 Fenchurch Avenue, London EC3M 5AG. Registered number 992726. Authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority.

Commentary

Performance as at Q4 2025 - The fund delivered Q4 returns of 5.33% net of fees for the D2 USD share class, outperforming the benchmark by 1.04%, bringing the year-to-date active return to +1.11%. Performance was supported by Sentiment, Quality, and Macro-focused insights, with Sentiment contributing the most. Insights capturing momentum from local news sentiment in Taiwan, cross-regional trending flows, and machine-learning-based analysis of surprising sales data were key drivers. Quality insights tied to company linkages and app-usage trends also added meaningful value, reflecting investor preference for operationally resilient firms with improving fundamentals. Meanwhile, Value detracted slightly, as traditional value metrics lagged the strong rally in growth-oriented sectors. At a country level, the strongest positive contributions came from Taiwan, Offshore China, and Korea. In Taiwan, underweight exposure to semiconductors added value amid mixed sector sentiment despite robust global demand.

Offshore China benefited from targeted overweights in insurance and automobile components, sectors that responded well to policy support and recovering consumption, while selective underweights in food products and real estate helped shield the portfolio from property-sector stress.

Korea contributed through active exposure to semiconductors and computer equipment, both of which outperformed due to continuing global investment in AI and technology infrastructure. On the other hand, the main detractors were Onshore China and India. Overweight exposure to pharmaceuticals in Onshore China weighed on performance as the sector faced regulatory headwinds, weak earnings momentum, and subdued investor sentiment.
