

INSTITUTIONAL JAPAN INDEX OPPORTUNITIES FUND

I Acc ISIN GB00B0LZBB16

Investment objective

The Fund aims to provide a return, of at least that achieved by the Solactive GBS Japan customised Index (the Reference Index) +0.5% per annum, before the deduction of charges, over any 5 year period.

For the fund's investment policy, refer to the Additional fund information on page 3.

Past performance does not predict future returns.

On 02/08/22 the fund received a windfall tax refund as a result of a successful settlement of historic tax claims filed with HM Revenue & Customs that increased the NAV by 0.67%. This uplift is reflected in all performance figures that span that date. Performance is on a net of fees basis, with gross income reinvested. Source: at 30/04/24. © 2024 Morningstar, Inc. Fees & charges (%)

Annual management charge (AMC)	0.30
Estimated ongoing charge (OCF)	0.37

All ongoing charges stated are as per latest published report and accounts.

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com.

Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Please note the performance target is to be achieved over a specific annualised time period. Refer to the performance target wording within the objective. From 31 October 2020, the Benchmark changed to the Solactive GBS Japan customised Index from the FTSE customised Japan Index, the Investment Objective, Performance Target Index & Policy also changed. Past performance shown before this date was achieved under circumstances that no longer apply. Fund size at 12pm on last business day of month. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date. The Solactive GBS Japan customised Index is a measure of the combined performance of large and medium sized companies listed on Japanese stock markets. It forms the basis of the Fund's performance target.

The Investment Association (IA) groups funds with similar geographic and/or investment remit into sectors. The Fund's ranking within the sector (as calculated by a number of data providers) can be a useful performance comparison against other funds with similar aims.

Investment policy

The Fund invests at least 80% of its assets in shares (also known as equities) of companies, of any size, in any industry, which are included in the Reference Index. The Fund may also invest in other assets including bonds, Collective Investment Schemes (including those managed by Janus Henderson), cash and money market instruments, and may use derivatives (complex financial instruments), including total return swaps, with the aim of making investment gains in line with the Fund's objective, to reduce risk or to manage the Fund more efficiently. The Fund is in part passively managed as its investments in at least 80% of its assets within shares of the Reference Index seek to replicate the components of the Reference Index. The components of the Reference Index will not be identically replicated, and this can lead to differences in performance. The 'customised' aspect of the Reference Index indicates that its performance is adjusted to reflect the actual tax rates applicable to dividend income received by the fund. As an additional means of assessing the performance of the Fund, the IA Japan sector average, which is based on a peer group of broadly similar funds, may also provide a useful comparator.

Investment strategy

The Investment Manager seeks to reflect the performance of the Reference Index while making use of investment strategies aimed at enhancing returns whilst taking a low level of additional risk. Some strategies used by the Investment Manager seek to generate returns based on differences in the prices of securities issued by, or associated with, companies that form part of the Reference Index. They can include, but are not limited to, liquidity strategies (investing in 'blocks of stock' at discounted prices), and relative value strategies (taking advantage of differences between the prices of securities related to the same company). Other strategies may not be related specifically to the Reference Index and can be outside Japan to the extent that those strategies remain consistent with the Fund's Investment Objective and Policy as set out above. Further details explaining the investment strategies are available on the Funds' pages on our website (www.janushenderson.com).

Fund specific risks

The Fund could lose money if a counterparty with which the Fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider. Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result. If a Fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a Fund which is more broadly diversified. The Fund may use derivatives to help achieve its investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses to the Fund may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. If the Fund holds assets in currencies other than the base currency of the Fund, or you invest in a share/unit class of a different currency to the Fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates. Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Returns from investing in index enhancing opportunities may vary over time relative to the Reference Index. The managers do not, however, seek to take high levels of risk and investors should therefore expect the typical level of enhancement of returns to be low. Strategies aimed at enhancing returns depend on the manager skill and decision-making; this therefore carries the risk that a Fund may underperform its Reference Index if the strategy used is unsuccessful. Additionally, depending on the share/unit class you invest in and any costs you pay to third parties to invest in our funds, after the deduction of ongoing charges and transaction costs your investment may underperform the Reference Index.

Glossary

Beta

Beta measures how a fund or security moves in relationship to the overall market. A market has a beta of 1. If the fund/security's beta is more than 1, it moves more than the market, while a beta lower than 1 means it moves to a lesser extent than the market. A negative beta could mean the fund/security moves in the opposite direction to the market.

Historic Yield

The Historic Yield reflects distributions declared over the past 12 months as a percentage of the mid-market share price, as at the date shown.

Price-to-book (P/B) ratio

A financial ratio used to value a company's shares. It is calculated by dividing a company's market value (share price) by the book value of its equity (value of the company's assets on its balance sheet). A P/B value <1 can indicate a potentially undervalued company or a declining business. The higher the P/B ratio, the higher the premium the market is willing to pay for the company above the book (balance sheet) value of its assets.

Price-to-earnings (P/E) ratio

A popular ratio used to value a company's shares, compared to other stocks, or a benchmark index. It is calculated by dividing the current share price by its earnings per share.

Sharpe ratio

This measures a portfolio's risk-adjusted performance. A high Sharpe ratio indicates a better risk-adjusted return. The ratio is designed to measure how far a portfolio's return can be attributed to fund manager skill as opposed to excessive risk taking.

Standard deviation

A statistic that measures the variation or dispersion of a set of values/data. A low standard deviation shows the values tend to be close to the mean while a high standard deviation indicates the values are more spread out. In terms of valuing investments, standard deviation can provide a gauge of the historical volatility of an investment.

Swaps

A derivative contract between two parties where pre-determined cash flows of two financial instruments are exchanged. Swaps can help to hedge risk and minimise uncertainty; for example currency swaps can be used to minimise foreign currency exposure.

Weighted average market cap

The average market capitalisation of a holding, weighted by the size of that position in a portfolio or index.
