AUTHORISED STATUS

IFSL RC Brown OEIC (the Company) is an investment company with variable capital incorporated with limited liability, registered in England and Wales under number IC54 and authorised by the Financial Conduct Authority (FCA) on 21 December 1999 with the Product Reference Number (PRN) 190625. The Company is a UCITS Scheme and is also an umbrella company for the purposes of the Open Ended Investment Company (OEIC) Regulations 2001. The operation of the Company is governed by the FCA Regulations, the Company's Instrument of Incorporation and the Prospectus.

Shareholders of the sub-funds do not have any proprietary interest in the underlying assets of the Company and will not be liable for the debts of the Company. A sub-fund is not a legal entity. If the assets attributable to a sub-fund were insufficient to meet its liabilities the shortfall will not be met out of the assets attributable to one or more other sub-funds of the Company. The sub-funds are segregated by law under the Protected Cell Regime.

The Company currently has two sub-funds: IFSL RC Brown UK Primary Opportunities Fund; and IFSL Meon Adaptive Growth Fund.

GENERAL INFORMATION

IFSL RC Brown UK Primary Opportunities Fund

Investment objective

The investment objective of the sub-fund is to outperform the FTSE All Share Index over any 5 year period, after any charges have been taken out of the sub-fund. However, there is no certainty this will be achieved.

Investment policy

At least 80% of the sub-fund will be invested in the shares of companies and investment trusts listed on UK stock markets. These will be incorporated/domiciled in the UK or will have significant business operations in the UK.

This may include through Exchange Traded Funds (ETFs) which themselves offer access to these companies, although this is not expected to exceed 10% of the sub-fund.

The sub-fund is actively managed, which means the investment manager decides which investments to buy or sell and when. The investment manager will maintain a concentrated portfolio, typically between 60-80 holdings, including small, medium and large companies operating in a range of different sectors.

The investment manager seeks to buy good quality companies at a discount to the prevailing market price. The sub-fund aims to take advantage of the discounts typically offered when companies are raising money or when large positions are being sold by existing investors.

The sub-fund will also invest in companies on the secondary market to take advantage of depressed prices during periods of market weakness and to ensure the sub-fund's assets are invested.

The sub-fund may also invest in other securities whose returns are linked to the performance of the company, such as preference shares and bonds which can be converted into shares (known as convertible bonds).

The sub-fund will typically hold cash to enable the ready settlement of liabilities and for the efficient management of the sub-fund and in pursuit of the sub-fund's objectives. In volatile market conditions this may be as high as 20% of the sub-fund's value although this is expected to be rare.

Investment strategy

The Investment Manager reviews financial publications, broker opinions and talks to the directors of the companies that are within the scope of the investment policy, to form views on which companies are suitable for buying and selling. The Investment Manager will assess the appropriate weightings for each sector and company based on their view of the market and outlook for the future.

Assessing performance

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors' as a way of dividing funds into broad groups with similar characteristics.

The sub-fund's investment policy puts it in the IA UK All Companies sector. You may want to assess the sub-fund's performance compared to the performance of this sector.

GENERAL INFORMATION

IFSL RC Brown UK Primary Opportunities Fund (continued)

Assessing performance (continued)

Investors should note that whilst the IA UK All Companies sector is representative of the general nature of the sub-fund, the sector contains funds investing across the market capitalisation spectrum from large cap to small cap. Owing to the sub-fund having a focus on investing in companies raising money, which most often occurs with small cap companies, the sub-fund is likely to have a greater weighting to small cap shares than both the average fund in the sector and the index. When large cap shares are performing better than small cap 35 shares the sub-fund is more likely to underperform the sector and index. Conversely, the sub-fund is more likely to outperform when small cap shares perform better than large cap shares.

Performance target

The sub-fund aims to grow investments, net of fees, greater than the average of the constituents of the FTSE All-Share Index over any 5 year period. The FTSE All-Share Index represents all UK companies traded on the London Stock Exchange. The FTSE All-Share Index has been chosen as the performance target as the composition of the index is broadly similar to the holdings in the sub-fund.

IFSL Meon Adaptive Growth Fund

Investment objective

The investment objective of the sub-fund is to grow the value of your investment over a minimum of 5 years.

The sub-fund will do this through a combination of capital growth, which is profit on investments held, with the potential for income received by the sub-fund, which is money paid out of investments, such as dividends from shares.

Investment policy

The sub-fund will normally have at least 80% invested in the shares of large-cap companies listed on any UK, USA and European stock markets.

The Investment Manager defines large-cap companies as those with a value over £1bn in the UK, \$4bn in the USA and€2.5bn in

The sub-fund may also invest in Exchange Traded Products (ETPs), such as Exchange Traded Funds (ETFs), which can give exposure to company shares, bonds (which are loans typically issued by companies and governments) and/or commodities (such as precious metals). Exposure to ETPs is not expected to be a significant part of the sub-fund in normal market conditions, less than 20%, and they may not always be held.

The sub-fund is actively managed, which means the Investment Manager decides which investments to buy or sell and when. The sub-fund's adaptive nature allows it to react to changes in stock market conditions with the aim of achieving the growth objective. The sub-fund will have no minimum or maximum exposure to any geographic location.

The sub-fund may hold up to 20% in cash to enable the ready settlement of liabilities (including redemptions), for the efficient management of the sub-fund and in pursuit of the sub-fund's objectives.

The Investment Manager utilises computer modelling to select the shares of large cap companies which indicate positive signals, that feed into the model, through either:

- 'Momentum' (which is a trend in price changes of an investment over a variety of time periods, on the view that such trends are likely to continue); and/or
- 'Fundamental signals' (which are the primary drivers of a company's share price over time and can be seen in a variety of metrics, such as, a company's price to earnings (P/E) ratio, debt levels, or price to book cost ratios; all of which drive the intrinsic value of a company).

However, there will be times when the momentum and/or fundamental signals do not identify enough companies for inclusion in the sub-fund to meet the minimum 80% in shares. In such circumstances, such as a stock market crash, the Investment Manager may reduce the sub-fund's investment in company shares to below 80%. When this occurs, the sub-fund may increase the holding in ETPs above 20% and may also have exposure to money market instruments (short term loans), money market funds, cash and near cash instruments. In the most extreme situations, the sub-fund may reduce exposure to company shares to 0%, although this is considered very unlikely.

The sub-fund itself will not invest in derivatives (instruments whose returns are linked to another asset or other variable factor such as exchange rates or stock markets). The underlying ETPs purchased may have the ability to use derivatives to varying degrees, including for investment purposes.

GENERAL INFORMATION

Investment strategy

The Investment Manager utilises computer modelling to assess numerous financial measures of the companies within the scope of the sub-fund's investment policy. Companies which meet the majority of these measures, along with large and highly liquid ETPs, are then subjected to additional computer modelling to identify trends in company / ETP share prices in order to automatically identify opportunities for buying and selling.

Where the computer model identifies a company or ETP for inclusion within the sub-fund, its initial weighting is determined by its market risk: higher risk companies are given a lower weighting whilst lower risk companies are given a higher weighting. Where the computer model identifies more companies than the sub-fund can accommodate, the companies are ranked based upon their financial metrics with the highest ranked companies being added to the sub-fund. The Investment Manager reserves the right to use their judgement to override the output of the computer model, should the Investment Manager believe there are considerations outside of the measures considered by the model, that should influence investment decisions. However, instances of this are expected to be infrequent.

Where the computer model does not identify enough companies or ETPs for inclusion in the sub-fund, the Investment Manager will invest in cash-based products until enough companies or ETPs are identified for inclusion.

Assessing performance

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors', as a way of dividing funds into broad groups with similar characteristics.

In normal market conditions, the sub-fund is closely aligned with the IA Global sector. You may want to assess the sub-fund's performance compared to the performance of this sector.

Rights and terms attaching to each share class

A share of each class represents a proportional entitlement to the assets of the sub-fund. The allocation of income and taxation and the rights of each share in the event that a sub-fund is wound up are on the same proportional basis.

Changes in prospectus

There have been no significant changes since the last annual report.

Up to date Key Investor Information Documents, Prospectus and Long Reports and Financial Statements for any fund within the ACD's range, can be requested by the investor at any time.

Cross holdings

The sub-funds of the Company do not hold shares in other sub-funds of the Company.

AUTHORISED CORPORATE DIRECTORS' STATEMENT

This report has been prepared in accordance with the requirements of the Collective Investment Schemes Sourcebook as issued and amended by the Financial Conduct Authority.

Allan Hamer Director Helen Redmond Director

4P. Leams

Investment Fund Services Limited 14 September 2023

NOTES TO THE INTERIM FINANCIAL STATEMENTS

for the six month period ended 31 July 2023

Basis for preparation

The interim financial statements have been prepared in compliance with UK Financial Reporting Standard 102 ("FRS 102") and in accordance with the Statement of Recommended Practice ("SORP") for Authorised Funds issued by the Investment Association in May 2014 and amended in June 2017.

The interim financial statements are prepared in sterling, which is the functional currency of the sub-funds. Monetary amounts in these financial statements are rounded to the nearest pound.

The interim financial statements have been prepared on the historical cost convention, modified to include the revaluation of investments and certain financial instruments at fair value.

Accounting policies

The accounting policies applied are consistent with those of the annual financial statements for the year ended 31 January 2023 and are described in those annual financial statements.

The investments of the sub-funds have been valued at their fair value at 12 noon on 31 July 2023.

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 31 July 2023

Performance to 31 July 2023

	Six months	<u>1 year</u>	<u>3 years</u>	<u>5 years</u>
IFSL RC Brown UK Primary Opportunities Fund	(1.66%)	(1.19%)	19.31%	4.97%
FTSE All-Share Index	0.76%	6.09%	41.75%	18.07%
IA UK All Companies sector	(0.12%)	2.75%	29.53%	9.47%

External Source of Economic Data: Morningstar (P Accumulation - quoted price to quoted price).

The performance figures above are based on quoted prices and will, therefore, differ from the performance in the Comparative Table.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this share class is calculated in sterling.

Investment commentary

It proved another difficult period for the United Kingdom (UK) equity market and it did not see the gains made by other major markets such as the United States (US), Europe and Japan. Typically, equity markets are places where shares of companies are bought and sold.

Inflation has proved more stubborn than anticipated resulting in the Bank of England (BoE) raising interest rates to 5.25%. Further evidence that inflation is being tamed and interest rates have peaked are likely to be well received by the market.

Performance of the sub-fund has remained challenging with fewer companies raising share capital and more growth orientated companies remaining out of favour. Greater market stability will lead to an increase in equity issuance which is likely to be beneficial to sub-fund performance.

Purchases

Whilst it was a quieter period than normal, we still participated in a number of primary opportunities with a focus on stable earners and dividend payers, rather than high growth companies. These purchases include; 3i Infrastructure, Sigmaroc, Midwich, and Lok N Store.

On occasion we are also prepared to buy new holdings in Financial Times Stock Exchange (FTSE) Companies at times of market distress.

Sales

A number of holdings were sold following disappointing updates in difficult market conditions. These included Saietta, Springfield Properties and Likewise. Profits from the sales of the holdings were taken in Microlise and HICL Infrastructure. Kape Technologies were subject to a takeover and this resulted in cash for the sub-fund.

Investment outlook

Squeezing inflation out of the system has been harder, and is taking longer, than expected. Central banks could plunge economies into recession if they continue to raise interest rates, so we believe that we are close to the peak of the interest rate cycle. Data shows there is a lag of between a year and eighteen months for the effect of an interest rate rise to fully show in economic statistics. The recent pause in its interest rate tightening cycle, indicates the US Federal Reserve is fully aware of this time lag. However, the BoE, having been late to start raising rates, may have overreacted with the recent 0.5% rise. This is simply because with a smaller percentage of households with mortgages than in the last tightening cycle and a greater percentage of borrowers with fixed rate loans, it will take longer for the effect of interest rate rises to impact overall discretionary spending. This, plus the cumulative impact of high energy prices and rising food bills, makes for an increased likelihood of a UK recession. Simply put, HM Treasury and the Bank of England may feel there is no option but for a recession to reduce demand in the economy to match the available supply. Recession is tough for all, but its effects hit some much harder than others and it was interesting to hear Andrew Bailey, the Governor of the BoE, talk of not wanting to see businesses rebuild margins at consumers' expense. This seems to be beyond his brief to maintain inflation at a rate of 2%, but it may indicate, from his discussions with HM Treasury, some insight into government policy. Despite the likely hit to consumer spending many sectors of the UK equity market remain attractively valued relative to other major western markets and there are many companies with substantial sales in global markets.

^A The return after charges is calculated using the underlying investments bid prices.

^B From 30 April 2021, the Operating Charges (or Ongoing Charges Figure) calculation has been extended to include, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^C On 1 August 2022, the annual management charge (AMC) for the A share classes was reduced from 1.50% to 1.25%.
^D On 31 March 2023, A Income and A Accumulation shares were converted to P Income and P Accumulation shares, respectively. From this date, A Income and A Accumulation shares became unavailable for investment.

 $^{^{\}rm E}$ Closing net asset value (£) and closing number of shares as at 31 July 2023.

F These figures have been annualised.

^A The return after charges is calculated using the underlying investments bid prices.

Operating charges are the same as the ongoing charges and are the total expenses paid by each share class in the period. Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the sub-fund. These amounts are expressed as a percentage of the average net asset value over the period and the average shares in issue for the pence per share figures.

^B From 30 April 2021, the Operating Charges (or Ongoing Charges Figure) calculation has been extended to include, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^C These figures have been annualised.

SYNTHETIC RISK AND REWARD INDICATOR (all share classes)

Lower risk						Higher risk
Typically lower rew	/ards				Туріс	cally higher rewards
1	2	3	4	5	6	7

This indicator aims to give you a measure of the price movement of the sub-fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio is used.

The sub-fund has been measured as 6 because its investments have experienced high volatility in the past. During the period the synthetic risk and reward indicator has remained unchanged.

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 31 July 2023

Performance to 31 July 2023

	Six months	<u>1 year</u>	27.04.2022
IFSL Meon Adaptive Growth Fund	3.00%	1.27%	(3.52)%
IA Global sector	3.98%	5.35%	5.95%

^A Launch period ended 26 April 2022.

External Source of Economic Data: Morningstar (P Accumulation - quoted price to quoted price).

The performance figures above are based on quoted prices and will, therefore, differ from the performance in the Comparative Table.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this share class is calculated in sterling.

Investment commentary

For the six-month period to 31 July 2023, the sub-fund continued to produce performance that is broadly in-line with its IA Global sector benchmark. In accordance with the sub-fund's investment policy, little was held in cash, and the sub-fund has been largely fully invested in company shares, known as equities, due to favourable global market conditions. Exposure within European markets has once again increased and exposure in the United States (US) has been slightly reduced. Levels of market volatility, which considers how often, and by how much, the value of investments go up and down, have continued to decrease during the period. US dollar weakness relative to sterling has been something of a challenge, but this situation has eased more recently. Weakness in the euro provided a similar, but less pronounced influence.

Investment outlook

One element of our investment process that perhaps sets us apart from many other funds listed within the IA Global sector is our determination to manage levels of price volatility where possible. We contend that global equity investors would prefer to navigate markets with as little volatility as possible and to this end we are achieving our aim. The period ahead looks likely to see an increase in volatility generally and we feel that we are in a good position to manage this efficiently. A significant part of US stock market performance over the past six months has been down to just a handful of higher risk and highly priced growth situations.

We see investor focus returning toward those equities that offer a clearer picture of longer-term fundamental strength. This renewed focus fits well with how our process analyses equities and we therefore look forward to the period ahead.

Operating charges are the same as the ongoing charges and are the total expenses paid by each share class in the period. Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the sub-fund. These amounts are expressed as a percentage of the average net asset value over the period and the average shares in issue for the pence per share figures.

^A Opening net asset value per share on 26 April 2022.

^B The return after charges is calculated using the underlying investments bid prices.

^C These figures have been annualised.

SYNTHETIC RISK AND REWARD INDICATOR (all share classes)

Lower risk						Higher risk
Typically lower rew	/ards				Туріс	cally higher rewards
1	2	3	4	5	6	7

This indicator aims to give you a measure of the price movement of the sub-fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio is used.

The sub-fund has been measured as 6 because its investments have experienced high volatility in the past. During the period the synthetic risk and reward indicator has remained unchanged.
