Northern Trust Investor Services Limited ('NTISL') 50 Bank Street, Canary Wharf, London E14 5NT (Authorised and regulated by the Financial Conduct Authority)

#### **Independent Auditor**

Grant Thornton UK LLP Statutory Auditors, Chartered Accountants 30 Finsbury Square, London EC2A 1AG

## **Basis of Accounting**

The interim financial statements have been prepared under the historical cost basis, as modified by the revaluation of investments and in accordance with FRS102 and the Statement of Recommended Practice ('SORP') for Financial Statements of UK Authorised Funds issued by the Investment Association ('IA') in May 2014 and amended in June 2017.

The interim financial statements have been prepared on the same basis as the audited financial statements for the year ended 31 March 2023.

The financial statements have been prepared on the going concern basis.

## **Certification of the Interim Report by the Authorised Corporate Director**

This report has been prepared in accordance with the requirements of the Financial Conduct Authority's Collective Investment Schemes Sourcebook ('the COLL Sourcebook') and the Statement of Recommended Practice issued by the IA.

## **Investment Objective and Policy**

#### **Investment objective**

The Sub-fund aims to provide an attractive level of income along with an opportunity for capital growth.

### **Investment policy**

The Sub-fund will invest in a diversified portfolio of European asset backed securities, where the securities will be backed by the assets of European institutions and issuers such as residential mortgages, commercial mortgages, automobile leases and loans, SME loans and other secured bonds. From time to time it is possible that a significant portion of the portfolio may be invested in securities from a particular geographical region of Europe. A portion of the portfolio may from time to time be held in Money Market Funds ('MMFs'), cash or cash equivalents, such as treasury bills and government bonds, in order to help manage the liquidity. The Sub-fund will aim to minimise currency risk by materially hedging the Sub-fund's exposure in the foreign exchange markets. The Sub-fund will also have the ability to use derivatives to reduce or mitigate other risks.

The choice of asset backed securities will typically be guided by the risk and the yield, although the potential for capital growth may also be a material factor.

The minimum recommended holding term is medium to long term.

The Investment Manager has overall responsibility for the investment policy and authority to select service providers pursuant to the Investment Management Agreement entered into with the Authorised Corporate Director ('ACD').

The Asset Backed Income Fund will not invest in any Collective Investment Schemes with the exception of Money Market Funds ('MMFs') which do not adversely alter the risk profile of the Sub-fund.

### **Investment Manager's Report**

for the period ended 30 September 2023

#### **Market Commentary**

The start of the reporting period saw wider markets sailing on calmer waters following the US regional banking turmoil, which gave the market the necessary stability and favourable backdrop to support primary issuance in a meaningful way.

Fundamentals have played their part in the overall performance of the sector. While traditional fixed income markets have been dominated by discussions around central bank policy and peak rates, with multiple rate rises from the Bank of England and the European Central Bank, the floating rate Asset Backed Securities ('ABS') and Collateral Loan Obliations ('CLOs') markets will benefit from the anticipated higher for longer rate environment.

Headline inflation is moderating although core inflation remains challenging. Annual house prices have been steadily falling over the reporting period and was reported at -5.3% in September by Nationwide. Housing market activity remains weak with just 45,400 mortgage approvals in August, which is around 30% below the monthly average prevailing in 2019 before the pandemic. The subdued picture is not surprising given rising mortgage rates and the challenging picture for housing affordability, however, swap rates stabilised over the period leading some lenders to start reducing mortgage lending rates.

The unemployment rate is very low, and, although this is the largest driver of mortgage arrears, the actual losses remain minimal. But the jobs market is weakening and while wage growth continues to be strong, cracks are starting to appear. We've previously reported that mortgage arrears will increase during 2023 and this has indeed been the case, with most of the underperformance being in legacy (pre-global financial crisis) non-conforming mortgage portfolios, albeit still at very low levels.

The period has seen around €47bn of gross issuance, including CLOs, culminating in September being the busiest single month since the onset of the global financial crisis. This was evenly split between €16bn of Residential Mortgage Backed Securities ('RMBS'), €17bn of auto and consumer ABS and €11.5bn of CLOs. Issuance was from a very geographically diverse sector across Europe and saw debut deals from new borrowers together with repeat issuers and from platforms that have not been seen in the market for multiple years.

One standout in the RMBS market was the welcome return of many bank lenders, which was not unexpected as central bank funding schemes started rolling off. September proved to be a very busy month with primary transactions from many banks and building societies, some of which had not issued for many years. It is becoming clear that banks are focussed on not just diversification of funding but also on diversification of capital sources, following the Credit Suisse Additional Tier write down. The market saw an increasing number of significant risk transfer ('SRT') and full capital structures being issued mainly by European banks. We welcome this supply, as the collateral tends to be the core business (and best performing collateral) of the bank, which will bring further diversification in the Company's portfolio in the coming months.

### **Investment Manager's Report**

continued

The European CLO market was active, seeing issuance during the period of €11.5bn, which took the full year-to-date issuance to around €18bn by the end of September. This was despite the challenges that the market has endured for most of the year, mainly around the weighted average cost of capital as AAA spreads have remained stubbornly wide, but also due to a lack of underlying leveraged loan supply.

Performance has been strong across all asset classes with spreads following a tightening trend over the months but remaining at attractive levels versus historical average.

#### **Portfolio Commentary**

The portfolio managers took the opportunity to add mezzanine tranches from geographically diverse deals whilst also maintaining an exposure to more liquid profiles like AAA CLOs yielding 6.5% (in GBP).

The managers continue to see good value in CLO BBs, which at the end of the period yielded around 13% (in GBP) and mezz RMBS where BBB tranches can be added at 9.5% yield. These are levels not seen since 2011 and therefore we don't see the need to take higher risk further down the capital stack.

#### **Market Outlook**

The consensus is that we are close to terminal rates in the UK and Europe and the market is pointing towards a soft landing next year. In this scenario, the economic conditions for European ABS remains favourable as unemployment and corporate defaults are expected to stay low. We have said on many occasions this year that we expect arrears to increase but not so far where we see any level of defaults that would cause concern. Performance has so far exceeded expectations. Deutsche Bank analysis recently noted that from a UK RMBS perspective one thing is clear: that the vast majority of borrowers who reverted from a fixed rate to a floating mortgage in 2023 - the cohort that in theory should be most exposed to affordability stress - have weathered the shock so far.

Better than expected fundamental data means that we see central banks keeping interest rates at higher levels for longer, further supporting the return profile of the Company's asset class. Rate cuts are already priced into the fixed rate market and floating rate bonds should benefit in the medium term from higher income from elevated base rates. With the path of the global economy uncertain we remain cautious of potential risks outstanding and we believe flexibility and liquidity remain important.

<sup>^</sup>Apex Fundrock Limited also acts as AIFM for this investment fund.

<sup>^^</sup>At the balance sheet date, all forward currency contracts were executed with one counterparty, Northern Trust Investor Services Limited ('NTISL') for the purpose of Effective Portfolio Management. Collateral obligations on losses or gains for each transaction would be met using cash held by the Custodian.

#### **Net Asset Value and Shares in Issue**

Class	Net Asset Value	Shares in issue	Net Asset Value per share £	Operating Charges*
A Income Gross	£236,379,756	221,958,733	1.06	0.62%

<sup>\*</sup>Operating charges include indirect costs incurred in the maintenance and running of the Sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated by annualising the expenses incurred against the average Net Asset Value for the accounting period.

## **Risk and Reward profile**

The risk and reward indicator table demonstrates where the Sub-fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-fund. The shaded area in the table below shows the Sub-fund's ranking on the risk and reward indicator.

Class A Gross Income shares is ranked 4 because funds of this type have experienced average rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Sub-fund:

- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency exchange rates may cause the value of your investment to decrease and increase.
- There is no guarantee that an asset which provides the security for a bond will maintain its value.
- Derivatives can be used to help reduce risk but we may not be fully successful. Derivatives can also reduce gains you may otherwise have made.
- Currency risk reduction techniques can have an effect on the value of your investment and on the performance of the share class.
- Bond values are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond.
- There may be cases where the organisation from which we buy a bond fails to carry out its obligations, which could cause losses to the Sub-fund.
- In difficult market conditions, the Sub-fund may not be able to sell an investment for its full value or at all. This could affect performance and, in extreme conditions, could cause the Sub-fund to defer or suspend requests from investors to sell shares.
- For further risk information please see the Prospectus.

#### **Risk warning**

An investment in an Open-Ended Investment Company should be regarded as a medium to long term investment. Investors should be aware that the price of shares and the revenue from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency are subject to fluctuation in exchange rates, which can be favourable or unfavourable.

### **Distribution Table**

for the period ended 30 September 2023

#### **Income Share Distributions**

Share class	Distribution	Shares	Net revenue p	Equalisation p	Distribution paid/payable 2023 p	Distribution paid 2022 p
A Gross	First interim	Group 1 Group 2	4.8912 2.5359	- 2.3553	4.8912 4.8912	3.4127 3.4127

Interim period: 01.04.23 - 30.09.23

Group 1: Shares purchased prior to a distribution period Group 2: Shares purchased during a distribution period

#### **Equalisation**

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It represents accrued revenue included in the purchase price of the shares. After averaging, it is returned with the distribution as a capital repayment. It is not liable to income tax but must be deducted from the cost of the shares for capital gains tax purposes.

## **Investment Objective and Policy**

### **Investment objective**

The Sub-fund aims to provide an attractive level of income along with an opportunity for capital growth. The Sub-fund aims to target a net total return of SONIA +500-800 basis points per annum.

There is no guarantee that this return will be achieved over that, or any, time period, and investors should note that capital is in fact at risk.

#### **Investment policy**

The Sub-fund will invest in a diversified portfolio of European asset backed securities, where the securities will be backed by the assets of European institutions and issuers such as residential mortgages, commercial mortgages, automobile leases and loans, SME loans and other secured bonds. From time to time it is possible that a significant portion of the portfolio may be invested in securities from a particular geographical region of Europe. A portion of the portfolio may from time to time be held in Money Market Funds ('MMFs'), cash or cash equivalents, such as treasury bills and government bonds, in order to help manage the liquidity. The Sub-fund will aim to minimise currency risk by materially hedging the Sub-fund's exposure in the foreign exchange markets. The Sub-fund will also have the ability to use derivatives to reduce or mitigate other risks.

The choice of asset backed securities will typically be guided by the risk and the yield, although the potential for capital growth may also be a material factor.

The minimum recommended holding term is medium to long term.

The Asset Backed Opportunities Fund will not invest in any Collective Investment Schemes with the exception of Money Market Funds ('MMFs') which do not adversely alter the risk profile of the Sub-fund.

### **Investment Manager's Report**

for the period ended 30 September 2023

#### **Market Commentary**

The start of the reporting period saw wider markets sailing on calmer waters following the US regional banking turmoil, which gave the market the necessary stability and favourable backdrop to support primary issuance in a meaningful way.

Fundamentals have played their part in the overall performance of the sector. While traditional fixed income markets have been dominated by discussions around central bank policy and peak rates, with multiple rate rises from the Bank of England ('BoE') and the European Central Bank ('ECB'), the floating rate Asset Backed Securities ('ABS') and Collateral Loan Obligations ('CLOs') markets will benefit from the anticipated higher for longer rate environment.

Headline inflation is moderating although core inflation remains challenging. Annual house prices have been steadily falling over the reporting period and was reported at -5.3% in September by Nationwide. Housing market activity remains weak with just 45,400 mortgage approvals in August, which is around 30% below the monthly average prevailing in 2019 before the pandemic. The subdued picture is not surprising given rising mortgage rates and the challenging picture for housing affordability, however, swap rates stabilised over the period leading some lenders to start reducing mortgage lending rates.

The unemployment rate is very low, and, although this is the largest driver of mortgage arrears, the actual losses remain minimal. But the jobs market is weakening and while wage growth continues to be strong, cracks are starting to appear. We've previously reported that mortgage arrears will increase during 2023 and this has indeed been the case, with most of the underperformance being in legacy (pre-global financial crisis) non-conforming mortgage portfolios, albeit still at very low levels.

The period has seen around €47bn of gross issuance, including CLOs, culminating in September being the busiest single month since the onset of the global financial crisis. This was evenly split between €16bn of Residential Mortgage Backed Securities ('RMBS'), €17bn of auto and consumer ABS and €11.5bn of CLOs. Issuance was from a very geographically diverse sector across Europe and saw debut deals from new borrowers together with repeat issuers and from platforms that have not been seen in the market for multiple years.

### **Investment Manager's Report**

continued

One standout in the RMBS market was the welcome return of many bank lenders, which was not unexpected as central bank funding schemes started rolling off. September proved to be a very busy month with primary transactions from many banks and building societies, some of which had not issued for many years. It is becoming clear that banks are focussed on not just diversification of funding but also on diversification of capital sources, following the Credit Suisse Additional Tier 1 write down. The market saw an increasing number of significant risk transfer and full capital structures being issued mainly by European banks. We welcome this supply, as the collateral tends to be the core business (and best performing collateral) of the bank, which will bring further diversification in the Company's portfolio in the coming months.

The European CLO market was active, seeing issuance during the period of €11.5bn, which took the full year-to-date issuance to around €18bn by the end of September. This was despite the challenges that the market has endured for most of the year, mainly around the weighted average cost of capital as AAA spreads have remained stubbornly wide, but also due to a lack of underlying leveraged loan supply.

Performance has been strong across all asset classes with spreads following a tightening trend over the months but remaining at attractive levels versus historical average.

#### **Portfolio Commentary**

The portfolio managers took the opportunity to add mezzanine tranches from geographically diverse deals whilst also maintaining an exposure to more liquid profiles like AAA CLOs yielding 6.5% (in GBP).

The managers continue to see good value in CLO BBs, which at the end of the period yielded around 13% (in GBP) and mezz RMBS where BBB tranches can be added at 9.5% yield. These are levels not seen since 2011 and therefore we don't see the need to take higher risk further down the capital stack.

#### **Market Outlook**

The consensus is that we are close to terminal rates in the UK and Europe and the market is pointing towards a soft landing next year. In this scenario, the economic conditions for European ABS remains favourable as unemployment and corporate defaults are expected to stay low. We have said on many occasions this year that we expect arrears to increase but not so far where we see any level of defaults that would cause concern. Performance has so far exceeded expectations. Deutsche Bank analysis recently noted that from a UK RMBS perspective one thing is clear: that the vast majority of borrowers who reverted from a fixed rate to a floating mortgage in 2023 - the cohort that in theory should be most exposed to affordability stress - have weathered the shock so far.

Better than expected fundamental data means that we see central banks keeping interest rates at higher levels for longer, further supporting the return profile of the Company's asset class. Rate cuts are already priced into the fixed rate market and floating rate bonds should benefit in the medium term from higher income from elevated base rates. With the path of the global economy uncertain we remain cautious of potential risks outstanding and we believe flexibility and liquidity remain important.

#### **Net Asset Value and Shares in Issue**

Class	Net Asset Value	Shares in issue	Net Asset Value per share £	Operating Charges*
I Income Gross	£69,016,187	74,892,549	0.9215	0.73%

<sup>\*</sup>Operating charges include indirect costs incurred in the maintenance and running of the Sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated by annualising the expenses incurred against the average Net Asset Value for the accounting period.

## **Risk and Reward profile**

The risk and reward indicator table demonstrates where the Sub-fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-fund. The shaded area in the table below shows the Sub-fund's ranking on the risk and reward indicator.

Class I Income Gross shares is ranked 4 because funds of this type have experienced average rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Sub-fund:

- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency exchange rates may cause the value of your investment to decrease and increase.
- There is no guarantee that an asset which provides the security for a bond will maintain its value.
- Derivatives can be used to help reduce risk but may not be fully successful. Derivatives can also reduce gains you may otherwise have made.
- Currency risk reduction techniques can have an effect on the value of your investment and on the performance of the share class.
- Bond values are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond.
- There may be cases where the organisation from which we buy a bond fails to carry out its obligations, which could cause losses to the Sub-fund.
- The Sub-fund will choose bonds based on their risk and attractiveness of their income. This could include lower rated bonds that are higher risk but typically pay a higher income. The potential for capital growth may also be a material factor in their selection.
- The Sub-fund invests in assets that are not always readily saleable without suffering a discount to fair value. The portfolio may have to lower the selling price, sell other investments or forego another, more appealing investment opportunity.
- In difficult market conditions, the Sub-fund may not be able to sell an investment for its full value or at all. This could affect performance and, in extreme conditions, could cause the Sub-fund to defer or suspend requests from investors to sell shares.
- For further risk information please see the Prospectus.

#### **Risk warning**

An investment in an Open-Ended Investment Company should be regarded as a medium to long term investment. Investors should be aware that the price of shares and the revenue from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency are subject to fluctuation in exchange rates, which can be favourable or unfavourable.

### **Statement of Total Return**

### **Distribution Table**

for the period ended 30 September 2023

#### **Income Share Distributions**

Share class	Distribution	Shares	Net revenue p	Equalisation p	Distribution paid/payable 2023 p	Distribution paid 2022 p
I Gross	First interim	Group 1 Group 2	1.8323 0.6323	- 1.2000	1.8323 1.8323	1.3346 1.3346
	Second interim	Group 1 Group 2	1.7809 0.8720	- 0.9089	1.7809 1.7809	1.5943 1.5943

First interim period: 01.04.23 - 30.06.23 Second interim period: 01.07.23 - 30.09.23

Group 1: Shares purchased prior to a distribution period Group 2: Shares purchased during a distribution period

#### **Equalisation**

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It represents accrued revenue included in the purchase price of the shares. After averaging, it is returned with the distribution as a capital repayment. It is not liable to income tax but must be deducted from the cost of the shares for capital gains tax purposes.

## **Investment Objective and Policy**

### **Investment objective**

The Sub-fund aims to exceed the return of the iBoxx GBP Corporate Bond Index over a rolling 3 year period based on a combination of income and capital growth.

#### **Investment policy**

The Sub-fund will seek to achieve its investment objective by investing primarily in Investment Grade Sterling denominated corporate bonds, or bonds denominated in currencies other than Sterling but hedged to Sterling. Interest rate risk (duration) will be restricted to being within 2 years +/- versus the benchmark duration. Sector limits to be applied are that the total weight of 'Banking' sector exposures cannot be greater than 10% above the benchmark weight, and similarly the total exposure to 'Financials' cannot be greater than 10% above the benchmark weight.

The Sub-fund may also invest a portion of its portfolio (which will not exceed 20% of the Net Asset Value of the Sub-fund) in high yield issues where, in the Investment Manager's opinion, the risk of investing in such issues is appropriate when balanced against the possible return. Such investments other than Investment Grade Bonds may include asset backed securities, where the securities will be backed by the assets of institutions and issuers such as but not limited to residential mortgages, commercial mortgages, automobile leases and loans, SME loans and other secured bonds. A portion of the portfolio may from time to time be held in cash or cash equivalents, such as treasury bills and government bonds, in order to help manage the liquidity.

Investment in government bonds will be restricted to a maximum of 20% of the Net Asset Value of the Sub-fund.

Investments will be selected based on: (1) their ability to assist the Sub-fund in meeting the investment objective and policy; (2) the Investment Manager's analysis of their potential to provide the Sub-fund with income and/or capital growth which is based on the Investment Manager's research of the market and resulting expectations as to how investments may perform; and (3) their ability to contribute towards the investment objective of providing a return exceeding the benchmark return through either an investment's expected growth in capital value or its expected returns in terms of income generated for the Sub-fund by holding such an investment.

The Sub-fund may invest in fixed or floating rate bonds which may be rated or unrated, but unrated exposures are limited to 10% of the Net Asset Value of the Sub-fund.

Up to 10% of the Net Asset Value of the Sub-fund may be invested in unlisted securities.

The Sub-fund may enter into derivative transactions for the purpose of Efficient Portfolio Management.

The Core Corporate Bond Fund will not invest in any Collective Investment Schemes with the exception of Money Market Funds ('MMFs') which do not adversely alter the risk profile of the Sub-fund.

The Investment Manager has overall responsibility for the investment policy and authority to select service providers pursuant to the Investment Management Agreement entered into with the Authorised Corporate Director ('ACD').

## **Investment Manager's Report**

for the period ended 30 September 2023

#### **Market Commentary**

The period began with the US regional banking crisis still at the front of investors' minds. The response from the Federal Reserve ('Fed') in March helped to calm fears, with deposit outflows steadying. However, First Republic Bank continued to struggle, resulting in a deal being brokered for JP Morgan to buy the ailing US regional lender. Volatility remained elevated through to the end of May, but news of deposit inflows and the resultant stabilising of regional bank share prices meant the sector eventually dropped out of the headlines.

May also saw the problems surrounding the US debt ceiling cause alarm once again, triggering negotiations between President Biden and House Speaker McCarthy. As these negotiations soured during the middle of the month, the June 2023 Treasury bill spiked to 5.40% as market participants questioned whether the US government might default or delay its due payments. Biden and McCarthy eventually came to a deal at the end of May that saw US fiscal spending reduced by \$64bn in 2024.

The second half of the period was dominated by the narrative of a soft landing. Inflation data was progressing encouragingly. US inflation showed good signs. In July, core inflation month-on-month was +0.16%, the lowest reading in over two years. And the last three prints of core inflation month-on-month data in the period, when annualised, was very close to the Fed's 2% target.

### **Investment Manager's Report**

continued

European inflation was slightly more volatile. However, the data towards the end of the period was also encouraging, with headline year-on-year inflation down to 4.3% for the Eurozone and core inflation for the bloc at 4.5%. In the UK, where inflation had been stickier, the September print finally gave the market a reason to be optimist that prices were coming down. Year-on-year headline inflation came in at 6.7% (versus 7% expected), while core inflation was 6.2% (versus 6.8% expected).

Growth data releases stayed robust – in particular, the labour market. In the US, there were strong non-farm payroll numbers across the period and unemployment finished at a very impressive 3.8%. In Europe and the UK, the unemployment rate also stayed at historically low levels.

Nonetheless, there were signs that growth was perhaps beginning to rollover, with some weak PMI survey results across the board. Manufacturing PMI numbers had been subdued for some time, but services also showed signs of weakening. Moreover, even in the labour market, the number of job openings trended downwards along with the number of employees quitting their jobs, reflecting a decreasing confidence in being able to find another one.

In terms of central banks during the period, the Federal Reserve ('Fed') delivered a 25 basis points ('bps') increase at both its May and July meetings, having skipped the June meeting, taking the federal funds rate to 5.25%-5.50%. And, whilst it did not hike again at its September meeting, this pause was accompanied by hawkish undertones. The updated dot plot maintained another planned hike for this year and then only two cuts for next year. The higher dots across the board came as the Federal Open Market Committee's economic forecasts moved further towards a soft-landing view, lowering unemployment projections for both 2024 and 2025 by 0.4 percentage points to 4.1%, only 0.3% higher than where unemployment is currently.

The European Central Bank ('ECB'), meanwhile, opted to hike at all four of its meetings by 25bp, taking the deposit rate to 4%. The period ended with diverging views from ECB members on whether more action would need to be taken on the deposit rate and a suggestion by some members that quantitative tightening may need to be looked at for upcoming meetings. The Bank of England hiked by 100bp across the period, but a lower than expected UK inflation print in September however meant that the Bank of England was able to pause in their September meeting at 5.25%. Year-on-year headline inflation came in at 6.7% (vs 7% expected) whilst core inflation was 6.2% (vs 6.8%). As a result, Gilts outperformed in September with the 10 year finishing just 8bp wider than the start of the month.

The soft-landing narrative, driven by data, the Fed's updated forecasts and central bank rhetoric led to a sharp selloff in the longer end of rate curves towards the end of the period. The 10-year US Treasuries reached ~4.70% because of this narrative as well as due to concerns from the market about the lingering US budget deficit and perhaps a need for a term premium to compensate for the volatility investors currently face.

#### **Portfolio Commentary**

With the gilt market seeing a rising yield curve over the period across the whole curve, multiple rate hikes and credit spreads only marginally tighter over the period after a selloff in September the total returns were negative for the period. As such, the Sub-fund was down -0.92%, which compares to a benchmark return which was -0.88%, a 4bps difference. With the general level of spread tightening seen this year, the Investment Manager's decision to de-risk the credit portfolio in Q2 has cost relative performance in Q3 slightly more than the steepening bias in the Sub-fund has actually helped returns, although September has seen modest outperformance from the more defensive positioning.

Having de-risked the portfolio in June, the Investment Manager kept broadly similar risk weightings across sectors in September having increased exposures to senior financials. With spread levels starting to look a little tight in some sectors, as economies deal with the continued drags from higher short term rates and elevated recession risks, the Investment Manager believes a cheaper entry point to re-add credit beta back into the portfolio is near at hand.

#### **Market Outlook and Strategy**

The end of extremely cheap money and expanding central bank balance sheets, coupled with geopolitical and economic risk, and now significant questions over bank credit quality (especially for smaller and regional US banks), mean that volatility is likely to remain in risk assets for some time yet.

As such, we believe the combination of lower than benchmark duration (-0.75yrs vs benchmark) and higher average yield, with high average credit quality, is the best way to address the likely volatility in the broader market we expect over the next few months, whilst still producing a solid income. This stance is designed to maximise the breakeven yield as much as possible within the constraints of the Sub-fund, meaning with a yield of ~7% and a duration of 5.4yrs, the breakeven yield is some +125bp which provides more protection against rising yields than the benchmark.

#### **Net Asset Value and Shares in Issue**

Class	Net Asset Value	Shares in issue	Net Asset Value per share £	Operating Charges*
A Income Gross	£157,416,190	188,791,602	0.83	0.40%

<sup>\*</sup>Operating charges include indirect costs incurred in the maintenance and running of the Sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated by annualising the expenses incurred against the average Net Asset Value for the accounting period.

## **Risk and Reward profile**

The risk and reward indicator table demonstrates where the Sub-fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-fund. The shaded area in the table below shows the Sub-fund 's ranking on the risk and reward indicator.

Class A Income Gross shares is ranked at 4 because funds of this type have experienced average rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Sub-fund:

- Bond values are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond.
- There may be cases where the organisation from which we buy a bond fails to carry out its obligations, which could cause losses to the Sub-fund.
- There is no guarantee that an asset which provides the security for a bond will maintain its value.
- Currency risk reduction techniques can have an effect on the value of your investment and on the performance of the share class.
- Derivatives can be used to help reduce risk but we may not be fully successful. Derivatives can also reduce gains you may otherwise have made
- In difficult market conditions, the value of some investments may be less predictable than normal and the Sub-fund may not be able to buy and sell these investments at the best time or at a fair price. This could affect the Sub-fund's performance, potentially reducing your returns.
- For further risk information please see the Prospectus.

#### **Risk warning**

An investment in an Open-Ended Investment Company should be regarded as a medium to long term investment. Investors should be aware that the price of shares and the revenue from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency are subject to fluctuation in exchange rates, which can be favourable or unfavourable.

### **Statement of Total Return**

### **Distribution Table**

for the period ended 30 September 2023

#### **Income Share Distributions**

Share class	Distribution	Shares	Net revenue p	Equalisation p	Distribution paid/payable 2023 p	Distribution paid 2022 p
A Gross	First interim	Group 1 Group 2	0.8976 0.3540	- 0.5436	0.8976 0.8976	0.6897 0.6897
	Second interim	Group 1 Group 2	0.9953 0.4834	- 0.5119	0.9953 0.9953	0.6960 0.6960

First interim period: 01.04.23 - 30.06.23 Second interim period: 01.07.23 - 30.09.23

Group 1: Shares purchased prior to a distribution period Group 2: Shares purchased during a distribution period

#### **Equalisation**

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It represents accrued revenue included in the purchase price of the shares. After averaging, it is returned with the distribution as a capital repayment. It is not liable to income tax but must be deducted from the cost of the shares for capital gains tax purposes.

## **Investment Objective and Policy**

### **Investment objective**

The Sub-fund aims to provide an attractive level of income along with an opportunity for capital growth, by investing in a broad range of bonds and fixed income assets.

#### **Investment policy**

The investment policy of the Sub-fund is to adopt a highly flexible approach that enables the Investment Manager to take advantage of prevailing market conditions as they change over time. The Sub-fund may invest in, or otherwise obtain exposure to, debt instruments from the whole range of fixed income assets including high yield bonds, investment grade bonds, government bonds, asset backed securities, Money Market Funds ('MMFs') and other bonds (such as, for example, emerging market sovereign bonds or bank capital perpetual bonds) as determined by the Investment Manager's view on risk and reward over time.

The Sub-fund will also use derivatives, such as interest rate and credit derivatives, to either optimize exposures or reduce them in conjunction with the Investment Manager's market viewpoint, thereby giving the Sub-fund the opportunity to perform in both rising and declining rate environments throughout the economic cycle. The Sub-fund may also employ synthetic short positions both for hedging purposes and to take advantage of deterioration either in the market generally or with respect to specific issuers. The Sub-fund may also hedge some or all of its exposure in the foreign exchange markets.

The Investment Manager has overall responsibility for the investment policy and authority to select service providers pursuant to the Investment Management Agreement entered into with the Authorised Corporate Director ('ACD').

The Dynamic Bond Fund will not invest in any Collective Investment Schemes with the exception of Money Market Funds ('MMFs') which do not adversely alter the risk profile of the Sub-fund.

### **Investment Manager's Report**

for the period ended 30 September 2023

#### **Market Commentary**

The period began with the US regional banking crisis still at the front of investors' minds. The response from the Federal Reserve ('Fed') in March helped to calm fears, with deposit outflows steadying. However, First Republic Bank continued to struggle, resulting in a deal being brokered for JP Morgan to buy the ailing US regional lender. Volatility remained elevated through to the end of May, but news of deposit inflows and the resultant stabilising of regional bank share prices meant the sector eventually dropped out of the headlines.

May also saw the problems surrounding the US debt ceiling cause alarm once again, triggering negotiations between President Biden and House Speaker McCarthy. As these negotiations soured during the middle of the month, the June 2023 Treasury bill spiked to 5.40% as market participants questioned whether the US government might default or delay its due payments. Biden and McCarthy eventually came to a deal at the end of May that saw US fiscal spending reduced by \$64bn in 2023.

The second half of the period was dominated by the narrative of a soft landing. Inflation data was progressing encouragingly. US inflation showed good signs. In July, core inflation month-on-month was +0.16%, the lowest reading in over two years. And the last three prints of core inflation month-on-month data in the period, when annualised, was very close to the Fed's 2% target.

European inflation was slightly more volatile. However, the data towards the end of the period was also encouraging, with headline year-on-year inflation down to 4.3% for the Eurozone and core inflation for the bloc at 4.5%. In the UK, where inflation had been stickier, the September print finally gave the market a reason to be optimist that prices were coming down. Year-on-year headline inflation came in at 6.7% (versus 7% expected), while core inflation was 6.2% (versus 6.8% expected).

Growth data releases stayed robust – in particular, the labour market. In the US, there were strong non-farm payroll numbers across the period and unemployment finished at a very impressive 3.8%. In Europe and the UK, the unemployment rate also stayed at historically low levels.

Nonetheless, there were signs that growth was perhaps beginning to rollover, with some weak PMI survey results across the board. Manufacturing PMI numbers had been subdued for some time, but services also showed signs of weakening. Moreover, even in the labour market, the number of job openings trended downwards along with the number of employees quitting their jobs, reflecting a decreasing confidence in being able to find another one.

### **Investment Manager's Report**

continued

In terms of central banks during the period, the Federal Reserve ('Fed') delivered a 25 basis points ('bps') increase at both its May and July meetings, having skipped the June meeting, taking the federal funds rate to 5.25%-5.50%. And, whilst it did not hike again at its September meeting, this pause was accompanied by hawkish undertones. The updated dot plot maintained another planned hike for this year and then only two cuts for next year. The higher dots across the board came as the Federal Open Market Committee's economic forecasts moved further towards a soft-landing view, lowering unemployment projections for both 2024 and 2025 by 0.4 percentage points to 4.1%, only 0.3% higher than where unemployment is currently.

The European Central Bank ('ECB'), meanwhile, opted to hike at all four of its meetings by 25bp, taking the deposit rate to 4%. The period ended with diverging views from ECB members on whether more action would need to be taken on the deposit rate and a suggestion by some members that quantitative tightening may need to be looked at for upcoming meetings. The Bank of England hiked by 100bp across the period, but the good inflation data the following month meant that they then left the rate unchanged in September at 5.25%.

The soft-landing narrative, driven by data, the Fed's updated forecasts and central bank rhetoric led to a sharp selloff in the longer end of rate curves towards the end of the period. The 10-year US Treasuries reached ~4.70% because of this narrative as well as due to concerns from the market about the lingering US budget deficit and perhaps a need for a term premium to compensate for the volatility investors currently face.

#### **Portfolio Commentary**

The team held elevated liquidity levels through the period composed of US Treasuries to allow flexibility in the Sub-fund. Portfolio managers gradually increased the duration of these US Treasuries as yields rose whilst there were initial signs that growth was showing signs of slowing down in certain sectors – with the Sub-fund holding 19% 10 year and 6% 30 year US Treasuries at the end of the period. For the credit proportion of the Sub-fund, the team reduced their exposure to high yield corporates and switched into Investment grade rated corporates and, Tier 2 and Senior Financials. This increased the credit quality of the portfolio and reduced exposure to high yield spreads which had performed very well - financials also appeared extremely attractive after contagion from the regional banking crisis.

#### **Market Outlook and Strategy**

Markets, similar to central banks, are looking to how the data develops with inflation and labour market data at the fore. Whilst currently the market is buying the soft landing rhetoric, it seems too early to call this with some growth measures rolling over and still with a large amount of hikes to possibly effect the real economy.

Portfolio Managers will keep liquidity elevated to allow flexibility as uncertainty remains high. Additionally, the long dated US Treasuries give protection in a more severe landing. The team will keep the credit quality of the portfolio robust and continue to conduct relative value switches across the portfolio.

<sup>\*</sup>Operating charges include indirect costs incurred in the maintenance and running of the Sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated by annualising the expenses incurred against the average Net Asset Value for the accounting period.

## **Risk and Reward profile**

The risk and reward indicator table demonstrates where the Sub-fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-fund. The shaded area in the table below shows the Sub-fund's ranking on the risk and reward indicator.

The Sub-fund is ranked 4 because funds of this type have experienced average rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Sub-fund:

- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency exchange rates may cause the value of your investment to decrease and increase.
- There is no guarantee that an asset which provides the security for a bond will maintain its value.
- The Sub-fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.
- Derivatives can be used to help reduce risk but may not be fully successful. Derivatives can also reduce gains you may otherwise have made.
- Currency risk reduction techniques can have an effect on the value of your investment and on the performance of the share class.
- Bond values are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond.
- There may be cases where the organisation from which we buy a bond fails to carry out its obligations, which could cause losses to the Sub-fund.
- In difficult market conditions, the value of some investments may be less predictable than normal and the Sub-fund may not be able to buy and sell these investments at the best time or at a fair price. This could affect the Sub-fund's performance, potentially reducing your returns.
- For further risk information please see the Prospectus.

### **Risk warning**

An investment in an Open-Ended Investment Company should be regarded as a medium to long term investment. Investors should be aware that the price of shares and the revenue from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency are subject to fluctuation in exchange rates, which can be favourable or unfavourable.

First interim period: 01.04.23 - 30.06.23 Second interim period: 01.07.23 - 30.09.23

Group 1: Shares purchased prior to a distribution period Group 2: Shares purchased during a distribution period

#### **Equalisation**

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It represents accrued revenue included in the purchase price of the shares. After averaging, it is returned with the distribution as a capital repayment. It is not liable to income tax but must be deducted from the cost of the shares for capital gains tax purposes.

## **Investment Objective and Policy**

### **Investment objective**

The Sub-fund aims to provide income along with an opportunity for capital growth, by investing in a broad range of fixed income assets, with an emphasis on capital preservation.

### **Investment policy**

The Sub-fund will adopt a highly flexible investment approach to take advantage of prevailing market conditions with the ability to change the emphasis of its investment focus within the fixed income universe over time. The key focus of the Sub-fund's investment objective will be to ensure that the majority of bonds in the Sub-fund's portfolio have a maximum expected final repayment date of 5 years, as this is currently deemed optimal. The key focus may however change over time, for example by shifting towards a portfolio with longer or shorter maturities (within the maximum expected maturity of 5 years) or by concentrating more in one particular part of the fixed income universe, particularly in times of stressed market conditions.

Investors should be aware that the "expected final repayment" of an instrument may be different to its "legal maturity" and is based on assumptions relating to the payment profile of the borrower and the instruments issued. Certain instruments enable early repayment of principal before the maturity date, which can occur on or after specified call dates. For instance a borrower may have agreed terms at a higher interest cost relative to prevailing rates that incentivises an earlier repayment of the debt.

The Sub-fund may obtain exposure to debt instruments from the whole range of fixed income assets including high yield bonds, investment grade bonds, government bonds, asset backed securities, Money Market Funds ('MMFs') and other bonds (such as, for example, emerging market sovereign bonds or bank capital perpetual bonds).

The Sub-fund will also use derivatives, such as interest rate and credit derivatives, to either optimize exposures or reduce them in conjunction with the Investment Manager's market viewpoint, thereby giving the Sub-fund the opportunity to perform in both rising and declining rate environments throughout the economic cycle. The Sub-fund may also employ synthetic short positions both for hedging purposes and to take advantage of deterioration either in the market generally or with respect to specific issuers. The Sub-fund may also hedge some or all of its exposure in the foreign exchange markets.

The choice of bonds will typically be guided by the yield, although the potential for capital growth may also be a material factor.

The minimum recommended holding term is medium to long term.

The Investment Manager has overall responsibility for the investment policy and authority to select service providers pursuant to the Investment Management Agreement entered into with the Authorised Corporate Director ('ACD').

The Focus Bond Fund will not invest in any Collective Investment Schemes with the exception of Money Market Funds ('MMFs') which do not adversely alter the risk profile of the Sub-fund.

## **Investment Manager's Report**

for the period ended 30 September 2023

#### **Market Commentary**

The period began with the US regional banking crisis still at the front of investors' minds. The response from the Federal Reserve ('Fed') in March helped to calm fears, with deposit outflows steadying. However, First Republic Bank continued to struggle, resulting in a deal being brokered for JP Morgan to buy the ailing US regional lender. Volatility remained elevated through to the end of May, but news of deposit inflows and the resultant stabilising of regional bank share prices meant the sector eventually dropped out of the headlines.

May also saw the problems surrounding the US debt ceiling cause alarm once again, triggering negotiations between President Biden and House Speaker McCarthy. As these negotiations soured during the middle of the month, the June 2023 Treasury bill spiked to 5.40% as market participants questioned whether the US government might default or delay its due payments. Biden and McCarthy eventually came to a deal at the end of May that saw US fiscal spending reduced by \$64bn in 2023.

The second half of the period was dominated by the narrative of a soft landing. Inflation data was progressing encouragingly. US inflation showed good signs. In July, core inflation month-on-month was +0.16%, the lowest reading in over two years. And the last three prints of core inflation month-on-month data in the period, when annualised, was very close to the Fed's 2% target.

## **Investment Manager's Report**

continued

European inflation was slightly more volatile. However, the data towards the end of the period was also encouraging, with headline year-on-year inflation down to 4.3% for the Eurozone and core inflation for the bloc at 4.5%. In the UK, where inflation had been stickier, the September print finally gave the market a reason to be optimist that prices were coming down. Year-on-year headline inflation came in at 6.7% (versus 7% expected), while core inflation was 6.2% (versus 6.8% expected).

Growth data releases stayed robust – in particular, the labour market. In the US, there were strong non-farm payroll numbers across the period and unemployment finished at a very impressive 3.8%. In Europe and the UK, the unemployment rate also stayed at historically low levels.

Nonetheless, there were signs that growth was perhaps beginning to rollover, with some weak PMI survey results across the board. Manufacturing PMI numbers had been subdued for some time, but services also showed signs of weakening. Moreover, even in the labour market, the number of job openings trended downwards along with the number of employees quitting their jobs, reflecting a decreasing confidence in being able to find another one.

In terms of central banks during the period, the Fed delivered a 25 basis points ('bps') increase at both its May and July meetings, having skipped the June meeting, taking the federal funds rate to 5.25%-5.50%. And, whilst it did not hike again at its September meeting, this pause was accompanied by hawkish undertones. The updated dot plot maintained another planned hike for this year and then only two cuts for next year. The higher dots across the board came as the Federal Open Market Committee's economic forecasts moved further towards a soft-landing view, lowering unemployment projections for both 2024 and 2025 by 0.4 percentage points to 4.1%, only 0.3% higher than where unemployment is currently.

The European Central Bank ('ECB'), meanwhile, opted to hike at all four of its meetings by 25bp, taking the deposit rate to 4%. The period ended with diverging views from ECB members on whether more action would need to be taken on the deposit rate and a suggestion by some members that quantitative tightening may need to be looked at for upcoming meetings. The Bank of England ('BoE') hiked by 100bp across the period, but the good inflation data the following month meant that they then left the rate unchanged in September at 5.25%.

The soft-landing narrative, driven by data, the Fed's updated forecasts and central bank rhetoric led to a sharp selloff in the longer end of rate curves towards the end of the period. The 10-year US Treasuries reached ~4.70% because of this narrative as well as due to concerns from the market about the lingering US budget deficit and perhaps a need for a term premium to compensate for the volatility investors currently face.

#### **Portfolio Commentary**

The team increased the credit quality of the portfolio by reducing their exposure to high yield corporates and switching into Investment grade rated corporates. In doing so they also reduced exposure to high yield spreads which had performed very well. The Portfolio Managers kept an elevated exposure to Asset Backed Securities ('ABS') products due to their extremely attractive spreads and structural protection against defaults, likewise the team increased their exposure to financials which looked extremely attractive having suffered from contagion of the US regional banking crisis.

#### **Market Outlook and Strategy**

Markets, similar to central banks, are looking to how the data develops with inflation and labour market data at the fore. Whilst currently the market is buying the soft landing rhetoric, it seems too early to call this with some growth measures rolling over and still with a large amount of hikes to possibly effect the real economy.

Portfolio Managers will continue to keep the credit quality of the portfolio robust and react accordingly as clarity on the severity of slowdown emerges. Moreover, the team will continue to conduct relative value switches across the portfolio.

### **Net Asset Value and Shares in Issue**

Class	Net Asset Value	Shares in issue	Net Asset Value per share £	Operating Charges*
A Income Gross	£190,262,881	228,095,738	0.83	0.61%

<sup>\*</sup>Operating charges include indirect costs incurred in the maintenance and running of the Sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated by annualising the expenses incurred against the average Net Asset Value for the accounting period.

## **Risk and Reward profile**

The risk and reward indicator table demonstrates where the Sub-fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-fund. The shaded area in the table below shows the Sub-fund's ranking on the risk and reward indicator.

Class A Income Gross shares is ranked at 4 because funds of this type have experienced average rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Sub-fund:

- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency exchange rates may cause the value of your investment to decrease and increase.
- There is no guarantee that an asset which provides the security for a bond will maintain its value.
- The Sub-fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount reinvested.
- Derivatives can be used to help reduce risk but may not be fully successful. Derivatives can also reduce gains you may otherwise have made.
- Currency risk reduction techniques can have an effect on the value of your investment and on the performance of the share class.
- Bond values are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond.
- There may be cases where the organisation from which we buy a bond fails to carry out its obligations, which could cause losses to the Sub-fund.
- In difficult market conditions, the value of some investments may be less predictable than normal and the Sub-fund may not be able to buy and sell these investments at the best time or at a fair price. This could affect the Sub-funds performance, potentially reducing the returns.
- For further risk information please see the Prospectus.

#### **Risk warning**

An investment in an Open-Ended Investment Company should be regarded as a medium to long term investment. Investors should be aware that the price of shares and the revenue from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency are subject to fluctuation in exchange rates, which can be favourable or unfavourable.

## **Statement of Total Return**

for the period ended 30 September 2023

		30.09.23		30.09.22
	£	£	£	£

### **Distribution Table**

for the period ended 30 September 2023

#### **Income Share Distributions**

Share class	Distribution	Shares	Net revenue p	Equalisation p	Distribution paid/payable 2023 p	Distribution paid 2022 p
A Gross	Interim	Group 1 Group 2	3.1916 1.5641	- 1.6275	3.1916 3.1916	2.5426 2.5426

Interim period: 01.04.23 - 30.09.23

Group 1: Shares purchased prior to a distribution period Group 2: Shares purchased during a distribution period

#### **Equalisation**

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It represents accrued revenue included in the purchase price of the shares. After averaging, it is returned with the distribution as a capital repayment. It is not liable to income tax but must be deducted from the cost of the shares for capital gains tax purposes.

## **Investment Objective and Policy**

### **Investment objective**

The Sub-fund aims to provide an attractive level of income relative to prevailing interest rates whilst maintaining a strong focus on capital preservation.

**Important Note:** The Sub-fund does not offer a capital guarantee or principal protection mechanism. Efforts to preserve the Sub-fund's capital will be focused on the selection of underlying securities where the Investment Manager has a high degree of confidence as to the issuer's ability to repay the principal due.

### **Investment policy**

The investment policy of the Sub-fund is to invest in a diversified portfolio of European and Australian Asset Backed Securities ('ABS'), rated at least BBB- (or equivalent) at the time of investment by one or more of Standard & Poor's, Moody's Investor Services and Fitch, where the securities will be backed by the assets of institutions and issuers such as but not limited to residential mortgages, commercial mortgages, automobile leases and loans, SME loans and other secured bonds.

A portion of the portfolio may be held in cash or cash equivalents, such as treasury bills and government bonds, in order to further enhance the Sub-fund's liquidity. From time to time it is possible that a significant portion of the portfolio may be invested in securities from a particular geographical region.

The Sub-fund will also use derivatives, including but not limited to credit derivatives, to either optimize exposures or reduce them in line with the Investment Manager's market viewpoint, thereby giving the Sub-fund the potential opportunity to perform through different market environments. The Sub-fund may also employ synthetic short positions both for hedging purposes and to take account of deterioration either in the market generally or with respect to specific issuers. The Sub-fund may also hedge some or all of its exposure in the foreign exchange markets.

The Investment Manager has overall responsibility for the investment policy and authority to select service providers pursuant to the Investment Management Agreement entered into with the Authorised Corporate Director ('ACD').

The Sub-fund will not invest in any Collective Investment Schemes with the exception of Money Market Funds ('MMFs') which do not adversely alter the risk profile of the Sub-fund.

## **Investment Manager's Report**

for the period ended 30 September 2023

#### **Market Commentary**

The start of the reporting period saw wider markets sailing on calmer waters following the US regional banking turmoil, which gave the market the necessary stability and favourable backdrop to support primary issuance in a meaningful way.

Fundamentals have played their part in the overall performance of the sector. While traditional fixed income markets have been dominated by discussions around central bank policy and peak rates, with multiple rate rises from the Bank of England and the European Central Bank, the floating rate Asset Backed Securities ('ABS') and Collateral Loan Obligations ('CLOs') markets will benefit from the anticipated higher for longer rate environment.

Headline inflation is moderating although core inflation remains challenging. Annual house prices have been steadily falling over the reporting period and was reported at -5.3% in September by Nationwide. Housing market activity remains weak with just 45,400 mortgage approvals in August, which is around 30% below the monthly average prevailing in 2019 before the pandemic. The subdued picture is not surprising given rising mortgage rates and the challenging picture for housing affordability, however, swap rates stabilised over the period leading some lenders to start reducing mortgage lending rates.

The unemployment rate is very low, and, although this is the largest driver of mortgage arrears, the actual losses remain minimal. But the jobs market is weakening and while wage growth continues to be strong, cracks are starting to appear. We've previously reported that mortgage arrears will increase during 2023 and this has indeed been the case, with most of the underperformance being in legacy (pre-global financial crisis) non-conforming mortgage portfolios, albeit still at very low levels.

## **Investment Manager's Report**

continued

The period has seen around €47bn of gross issuance, including CLOs, culminating in September being the busiest single month since the onset of the global financial crisis. This was evenly split between €16bn of Residential Mortgage Backed Securities ('RMBS'), €17bn of auto and consumer ABS and €11.5bn of CLOs. Issuance was from a very geographically diverse sector across Europe and saw debut deals from new borrowers together with repeat issuers and from platforms that have not been seen in the market for multiple years.

One standout in the RMBS market was the welcome return of many bank lenders, which was not unexpected as central bank funding schemes started rolling off. September proved to be a very busy month with primary transactions from many banks and building societies, some of which had not issued for many years. It is becoming clear that banks are focussed on not just diversification of funding but also on diversification of capital sources, following the Credit Suisse Additional Tier 1 write down. The market saw an increasing number of significant risk transfer ('SRT') and full capital structures being issued mainly by European banks. We welcome this supply, as the collateral tends to be the core business (and best performing collateral) of the bank, which will bring further diversification in the Company's portfolio in the coming months.

The European CLO market was active, seeing issuance during the period of €11.5bn, which took the full year-to-date issuance to around €18bn by the end of September. This was despite the challenges that the market has endured for most of the year, mainly around the weighted average cost of capital as AAA spreads have remained stubbornly wide, but also due to a lack of underlying leveraged loan supply.

Performance has been strong across all asset classes with spreads following a tightening trend over the months but remaining at attractive levels versus historical average.

#### **Portfolio Commentary**

The CLO sector was more correlated with broader markets and periods of stability and good news drove a strong rally across the mezzanine tranches. For the portfolio managers these events presented the opportunity to de-risk the portfolio by reducing the BBB mezzanine CLO allocation by several percentage points and further increase liquidity. The portfolio managers also decided to further reduce the CMBS exposure in April due to ongoing nervousness around CRE valuations. With AAA RMBS yielding almost 6%, level not seen since 2011 we believe being defensive is the right positioning at this stage of the cycle.

#### **Market Outlook**

The consensus is that we are close to terminal rates in the UK and Europe and the market is pointing towards a soft landing next year. In this scenario, the economic conditions for European ABS remains favourable as unemployment and corporate defaults are expected to stay low. We have said on many occasions this year that we expect arrears to increase but not so far where we see any level of defaults that would cause concern. Performance has so far exceeded expectations. Deutsche Bank analysis recently noted that from a UK RMBS perspective one thing is clear: that the vast majority of borrowers who reverted from a fixed rate to a floating mortgage in 2023 - the cohort that in theory should be most exposed to affordability stress - have weathered the shock so far.

Better than expected fundamental data means that we see central banks keeping interest rates at higher levels for longer, further supporting the return profile of the Company's asset class. Rate cuts are already priced into the fixed rate market and floating rate bonds should benefit in the medium term from higher income from elevated base rates. With the path of the global economy uncertain we remain cautious of potential risks outstanding and we believe flexibility and liquidity remain important.

<sup>\*</sup>Operating charges include indirect costs incurred in the maintenance and running of the Sub-fund, as disclosed (but not limited to) the detailed expenses within the Statement of Total Return. The figures used within this table have been calculated by annualising the expenses incurred against the average Net Asset Value for the accounting period.

## **Risk and Reward profile**

The risk and reward indicator table demonstrates where the Sub-fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-fund. The shaded area in the table below shows the Sub-fund's ranking on the risk and reward indicator.

The Sub-fund is ranked at 3 because funds of this type have experienced low to medium rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Sub-fund:

- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency exchange rates may cause the value of your investment to decrease and increase.
- On occasions the Sub-fund may be significantly invested in particular geographical regions, meaning it will have greater exposure to the market, political and economic risks of those regions than if it was more diversified across a wider number of countries.
- There is no guarantee that an asset which provides the security for a bond will maintain its value.
- The Sub-fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.
- Derivatives can be used to help reduce risk but we may not be fully successful. Derivatives can also reduce gains you may otherwise have made.
- Currency risk reduction techniques can have an effect on the value of your investment and on the performance of the share class.
- Bond values are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond.
- There may be cases where the organisation from which we buy a bond fails to carry out its obligations, which could cause losses to the Sub-fund.

## **Risk and Reward profile**

continued

- In difficult market conditions, the value of some investments may be less predictable than normal and the Sub-fund may not be able to buy and sell these investments at the best time or at a fair price. This could affect the Sub-fund's performance, potentially reducing your returns.
- For further risk information please see the Prospectus.

#### **Risk warning**

An investment in an Open-Ended Investment Company should be regarded as a medium to long term investment. Investors should be aware that the price of shares and the revenue from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency are subject to fluctuation in exchange rates, which can be favourable or unfavourable.

### **Statement of Total Return**

for the period ended 30 September 2023

		30.09.23		30.09.22
	£	£	£	£

L Gross	Interim	Group 1	3.0719	_	3.0719	1.4256
		Group 2	_	3.0719	3.0719	1.4256

Interim period: 01.04.23 - 30.09.23

Group 1: Shares purchased prior to a distribution period Group 2: Shares purchased during a distribution period

#### **Equalisation**

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It represents accrued revenue included in the purchase price of the shares. After averaging, it is returned with the distribution as a capital repayment. It is not liable to income tax but must be deducted from the cost of the shares for capital gains tax purposes.

## MI TwentyFour Investment Funds

### **General Information**

#### **Authorised Status**

MI TwentyFour Investment Funds (the 'Company') is structured as an Investment Company with Variable Capital ('ICVC'), under regulation 12 (Authorisation) of the OEIC Regulations (Open-Ended Investment Companies Regulations 2001 (SI 2001/1228)).

The Company does not intend to have an interest in immovable property.

The Company is authorised and regulated in the UK by the Financial Conduct Authority ('FCA') as a UCITS Retail Scheme and 'Umbrella Company' under the COLL Sourcebook.

The Company was incorporated in England and Wales on 23 July 2009 under registration number IC000765. The Shareholders are not liable for the debts of the Company.

The Company currently has 6 Sub-funds, which are detailed below:

MI TwentyFour Investment Funds - Asset Backed Income Fund (Launched 16.01.2013)

MI TwentyFour Investment Funds - Asset Backed Opportunities Fund (Launched 11.04.2017)

MI TwentyFour Investment Funds - Core Corporate Fund (Launched 25.01.2016)

MI TwentyFour Investment Funds - Dynamic Bond Fund (Launched 26.04.2010)

MI TwentyFour Investment Funds - Focus Bond Fund (Launched 29.02.2012)

MI TwentyFour Investment Funds - Monument Bond Fund (Launched 10.08.2009)

#### **Head Office**

Hamilton Centre, Rodney Way, Chelmsford, Essex CM1 3BY

#### **Address for Service**

The Head Office is the address in the United Kingdom for service on the Company of notices or other documents required or authorised to be served on it.

#### **Base Currency**

The base currency of the Company is Pounds Sterling.

### **Share Capital**

The minimum share capital of the Company is £1 and the maximum is £100,000,000,000. Shares in the Company have no par value. The share capital of the Company at all times equals the sum of the Net Asset Value of the Sub-funds.

#### **Classes of Shares**

The Instrument of Incorporation allows each Sub-fund to issue different classes of shares in respect of any Sub-fund.

The Sub-funds currently have the following classes of shares available for investment:

	Share Class													
	A Net		A Gross		l Net		I Gross		M Gross		L Net		L Gross	
Sub-fund	Inc	Acc	Inc	Acc	Inc	Acc	Inc	Acc	Inc	Acc	Inc	Acc	Inc	Acc
Asset Backed Income Fund	-	_	~	-	_	-	-	-	-	-	-	-	-	_
Asset Backed Opportunities Fund	_	_	_	_	_	_	~	_	-	-	-	-	_	_
Core Corporate Bond Fund	-	_	~	<b>/</b> *	_	_	-	_	-	-	-	-	-	_
Dynamic Bond Fund	_	~	~	_	~	~	~	~	~	-	-	-	_	_
Focus Bond Fund	-	_	~	_	_	_	_	_	-	-	-	-	-	-
Monument Bond Fund	_	~	_	-	~	~	~	~	_	-	/	~	~	~

<sup>\*</sup>This share class has no investment at the date of this report.

The Company may issue both Income and Accumulation Shares.

Holders of Income shares are entitled to be paid the revenue attributable to such shares in respect of each annual accounting period in the currency of the relevant share class.

Holders of Accumulation shares are not entitled to be paid the revenue attributable to such shares, but that revenue is retained and accumulated for the benefit of Shareholders and is reflected in the price of shares.

## MI TwentyFour Investment Funds

### **General Information**

continued

#### **Valuation Point**

The scheme property of the Company and each Sub-fund will normally be valued at 18:00 on each dealing day for the purpose of calculating the price at which shares in the Company may be issued, sold, repurchased or redeemed.

For the purpose of the pricing of shares, a business day is defined as a day on which the dealing office of the ACD is open for the buying and selling of shares. The ACD may at any time during a business day carry out an additional valuation of the property of the Subfunds if the ACD considers it desirable to do so, with the Depositary's approval.

#### **Buying, Redeeming and Switching of Shares**

The ACD will accept orders for the purchase, sale and switching of shares on normal business days between 08:30 and 16:30. Instructions to buy or sell shares may either be in writing to:

Hamilton Centre, Rodney Way, Chelmsford, Essex CM1 3BY Or by telephone to: 0345 026 4286

The ACD has the right to establish facilities for recording telephone calls made or received on this telephone line.

A contract note giving details of the shares purchased will be issued no later than the next business day after the business day on which an application to purchase shares is received and instrumented by the ACD. Certificates will not be issued in respect of shares. Ownership of shares will be evidenced by an entry on the register of Shareholders.

#### **Pricing Basis**

There is a single price for buying, selling and switching shares in a Sub-fund which represents the Net Asset Value of the Sub-fund concerned. The share price is calculated on a forward pricing basis, that is at the next Valuation Point after the purchase or redemption is deemed to be accepted by the ACD.

The prices of shares are published daily on www.fundrock.com. Neither the Company nor the ACD can be held responsible for any errors in the publication of the prices. The shares in the Company will be issued and redeemed on a forward pricing basis which means that the price will not necessarily be the same as the published price.

#### **Other Information**

The Instrument of Incorporation, Prospectus, Key Investor Information Document and the most recent interim and annual reports may be inspected at the office of the ACD which is also the Head Office of the Company. Copies may be obtained free of charge upon application. They are also available from the website of the ACD, the details of which are given in the directory of this report.

Shareholders who have complaints about the operation of the Company should in the first instance contact the ACD, or, following that, may make their complaint direct to the Financial Ombudsman Service, Exchange Tower, London E14 9SR.

#### **Significant Information**

Effective 13 July 2023 Maitland Institutional Services Limited changed name to Apex Fundrock Limited.

The ACD has assessed the Russia - Ukraine war implication and although the Company has no direct exposure to Russian or Ukrainian assets the crisis has and will have a wider impact in terms of market performance.

#### **Risk Warning**

An investment in an Open-Ended Investment Company should be regarded as a medium to long term investment. Investors should be aware that the price of shares and the revenue from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance. Investments denominated in currencies other than the base currency are subject to fluctuation in exchange rates, which can be favourable or unfavourable.
