Allianz Index-Linked Gilt Fund

Investment team

Ranjiv Mann
(since 03/06/2024)

Filippo Novembri
(since 03/06/2024)

Oliver Sloper
(since 09/04/2025)

Investment objective

The Fund aims to achieve income and capital growth, by aiming to outperform (net of fees) the FTSE Actuaries UK Index-Linked Gilts All Stocks Index Midday Total Return (in GBP), over a rolling three year period. It invests directly in index-linked gilts, overseas index-linked government bonds, index-linked government guaranteed bonds, gilts, conventional government bonds, corporate and supranational bonds, or by gaining exposure indirectly through the use of derivatives. At least 80% of the Fund's assets will be invested in index-linked gilts issued by the United Kingdom Government. Please see the Key Investor Information Document for objectives and investment policy.

Performance (basis GBP, net of fees) [1]

OPPORTUNITIES AND RISKS

Opportunities

- Interest income on bonds, capital gains opportunities on declining interest rates
- Inflation-linked securities compensate for loss of purchasing power
- Particular potential of investments in inflation-linked bonds from the UK
- Possible extra returns through single security analysis and active management

Risks

- Interest rates vary, bonds suffer price declines on rising interest rates. The fund unit price may be subject to increased volatility.
- Nominal yields of inflation-linked securities lower than that of government bonds
- Underperformance of inflation-linked bonds from the UK possible
- Success of single security analysis and active management is not guaranteed

Footnotes

1) The calculation is based on the net asset value per unit/share (front-end load in the first year of investment deducted) assuming distributions were reinvested. Calculation according to BVI method. The performance in this model calculation is based on an invested amount of EUR 1,000 and is adjusted for the following expenses: front-end load of 0.0% (invested amount reduced by EUR 0.00 on the date of the subscription) in the first year of investment. The management of the account may involve annual custodian fees, which will reduce the performance. Past performance does not predict future returns.These figures refer to the past. If the currency of a financial product, financial service or its costs is different from your reference currency, the return and/or costs can increase or decrease as a result of currency fluctuations. Source for all data and chart (if not indicated otherwise): IDS GmbH.

2) Morningstar Rating: © 2007 Morningstar, Inc., all rights reserved. The information given here: (1) is protected by copyright for Morningstar and/or its content providers / (2) may not be reproduced or distributed / and (3) is not guaranteed to be accurate, complete or up-to-date. Morningstar and its content providers assume no responsibility for any losses or damage that result from any use of the information provided. Past performance is not a guarantee of future results. To determine the Morningstar Rating, funds of a comparable group in issue for at least three years are considered. The long-term performance serves as a basis, taking into account fees and risk. As a result, the funds are awarded stars, which are calculated monthly: Top 10%: 5 stars / next 22.5%: 4 stars / middle 35%: 3 stars / next 22.5%: 2 stars / flop 10%: 1 star. A ranking, rating or award is not an indicator of future performance and is subject to change over time. Rating as of: 31/07/2026

3) The Risk Indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The categorization of a product is not guaranteed and may change in the future. Even the lowest category 1 does not mean a risk-free investment

4) until 31/12/2018 FTSE ACTUARIES UK GOVERNMENT INDEX LINKED GILTS ALL STOCKS TOTAL RETURN GBP (MIDDAY) INDEX RETURN IN GBP

5) If the acquisition of Fund units is subject to a sales charge, up to 100% of such sales charge may be collected by the distributor / the exact amount shall be mentioned by the distributor as part of the investment advisory process. This also applies to any payment by the Management Company of an ongoing distribution fee from the all-in fee to the distributor. The all-in fee includes the expenses previously called management, administration and distribution fees

6) The stated ongoing charges reflect the total expense ratio (TER) of the Fund. In the event of a new issue, a short financial year or a fee adjustment, the Fund's ongoing charges will be estimated. Ongoing charges may vary from year to year and do not include transaction costs for the purchase or sale of assets for the Fund. In addition, no costs resulting from any performance-related remuneration are included in ongoing charges.

7) Effective duration is a measure of the price sensitivity of bonds, particularly useful for bonds with embedded options. It is calculated by using the interest rate model to calculate three values for the bond: the value given the current yield curve, and the values for both up and down shocks to that curve.

8) Yield to maturity: The yield to maturity of a bond indicates what capital growth p.a. is theoretically possible up to maturity, if bought at the current price. In addition to coupon income, any price gains/losses up to repayment of the bond are taken into account. The yield to maturity of a fund is the weighted average of the yield to maturity of all the bonds that are held. It is assumed that the bonds are held until maturity and interest income is reinvested on the same conditions. The yield to maturity is a portfolio characteristic / in particular, it does not reflect the actual fund income. The expenses charged to the fund are not taken into account. As a result, the yield to maturity is not suitable as an indicator of the future performance of a bond fund.

9) Yield to worst: Represents the lowest potential yield that an investor could theoretically receive on the bond up to maturity if bought at the current price (excluding the default case of the issuer). The yield to worst is determined by making worst-case scenario assumptions, calculating the returns that would be received if worst-case scenario provisions, including prepayment, call or sinking fund, are used by the issuer (excluding the default case). It is assumed that the bonds are held until maturity and interest income is reinvested on the same conditions. Calculation is before currency hedging. The yield to worst is a portfolio characteristic / in particular, it does not reflect the actual fund income. The expenses charged to the fund are not taken into account. As a result, the yield to worst is not suitable as an indicator of the future performance of a bond fund. Forecasts are not a reliable indicator of future results.

10) Alpha is a measure of a portfolio's excess return relative to its expected return based on its risk level. It represents the value added (or subtracted) by a portfolio manager beyond what is explained by market movements.

11) Tracking error is the difference in actual performance between the portfolio and its corresponding benchmark. The tracking error can be also considered as an indicator of how actively a fund is managed and its corresponding risk level. It is measured as standard deviation of the portfolio's excess returns over the benchmark.

12) The Information Ratio (IR) is a measure of a portfolio manager's ability to generate excess returns relative to a benchmark, adjusted for risk.

13) Volatility measures the fluctuation range of the fund's performance over a specified period of time

14) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.

15) This is for guidance only and not indicative of future allocation.

Morningstar style box Equities: This fund appeared as a High Extensive fund on the Morningstar Style BoxTM at 30/06/2026.

Disclaimer
Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. Investing in fixed income instruments may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including positions with respect to short-term fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values of these instruments are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Allianz Index-Linked Gilt Fund is an open-ended investment company with variable capital with limited liability organised under the laws of England and Wales. The value of the units/shares which belong to the Unit/Share Classes of the Sub-Fund that are denominated in the base currency may be subject to a strongly increased volatility. The volatility of other Unit/Share Classes may be different. Past performance does not predict future returns. If the currency in which the past performance is displayed differs from the currency of the country in which the investor resides, then the investor should be aware that due to the exchange rate fluctuations the performance shown may be higher or lower if converted into the investor's local currency.
