

Fund objective

To outperform (after deduction of costs) the S&P Global Small Cap Index, as stated in sterling, over rolling five-year periods.

The manager believes this is an appropriate target given the investment policy of the Fund and the approach taken by the manager when investing. In addition, the manager believes an appropriate performance comparison for this Fund is the Investment Association Global Sector.

There is no guarantee that this objective will be achieved over any time period and actual investment returns may differ from this objective, particularly over shorter time periods.

Investment proposition

The Fund invests in companies that offer significant growth prospects with an emphasis on companies operating in industries with potential for structural change and innovation. The Fund's holdings will, by their nature, offer a wide range of potential outcomes. We aim to embrace this uncertainty and believe it is important that the portfolio is adequately diversified by name and thematic influence; and sufficiently broad so as to be open to the inclusion of new ideas. The Fund has a bias towards smaller companies.

Index: S&P Global Small Cap. As well as cash in the bank, this balance includes unsettled cash flows arising from both shareholder flows and outstanding trades. Therefore, a negative balance may arise from timing differences between shareholder flows and security trading and does not necessarily represent a bank overdraft.

Key terms

Active share is a measure of the Fund's overlap with the benchmark. An active share of 100 indicates no overlap with the index and an active share of zero indicates a portfolio that tracks the index.

Annual turnover is calculated as the sum of the monthly turnover figures for the 12-month period.

Periodic performance is a method of evaluating how a fund is doing over time. It compares a fund's performance in each period to its performance in past periods. It also looks at the performance of the fund to the performance of an index or its peers.

Discrete performance is a method of evaluating the degree to which a fund performs compared against its benchmark on a given date.

Historic yield is based on distributions paid by the Fund in the previous 12 months as a percentage of the mid-market share price, as at the date shown. Investors may be subject to tax on their distributions, however, we are unable to give tax advice. Where we believe the historic yield to be materially unrepresentative, forecast yields have been quoted based on estimated income and expenses.

IA Sectors are provided by the Investment Association. These sectors break up the universe of available funds to help investors navigate the large number of available products.

Additional fund information

The ongoing charge figure may vary from year to year and will exclude the costs of buying and selling assets for the Fund (unless these assets are shares of another fund). The Ongoing Charge Figure (OCF) is at the latest annual or interim period. The OCF may be lower than previous declarations as a result of a revision to how the indirect fees associated with closed-ended investment companies need to be shown. This does not necessarily mean that fund expenses have gone down rather than we have reverted to how they have been calculated until 30 June 2022 to reflect the revised Investment Association's Guidance on Disclosure of Fund Charges and Costs (July 2020, updated January 2022, revised November 2023). Further explanation of all the charges and costs relating to this Fund can be found in the Enhanced Disclosure of Fund Charges and Costs document, which is available through our website, bailliegifford.com. Where the share class has been launched during the financial period and / or expenses during the period are not representative, an estimate of expenses may have been used instead. Baillie Gifford operates a single swinging price for the Fund and, therefore, may apply a dilution adjustment to the price to protect long-term investors from the costs associated with buying and selling underlying investments that result from other investors joining or leaving the Fund. This adjustment will affect relative performance, either positively or negatively.

Turnover is calculated by taking the smaller figure of either total purchases or total sales for the month and dividing it by an average market value. The Annual Turnover is then calculated as the sum of the monthly turnover figures for the 12-month period.

All figures are rounded, so any totals may not sum.

Target market

This Fund is suitable for all investors seeking a Fund that aims to deliver capital growth over a long-term investment horizon. The investor should be prepared to bear losses. This Fund is compatible for mass market distribution. This Fund may not be suitable for investors who are concerned about short-term volatility and performance, seeking a regular source of income and investing for less than five years. This Fund does not offer capital protection.

Risk warnings

Investment markets can go down as well as up and market conditions can change rapidly. The value of an investment in the Fund, and any income from it, can fall as well as rise and investors may not get back the amount invested.

The specific risks associated with the Fund include:

- Any value assigned to illiquid securities which are difficult to trade, such as those in smaller, immature companies, may not accurately reflect the price the Fund might receive upon their sale.
- Custody of assets involves a risk of loss if a custodian becomes insolvent or breaches duties of care.
- Investment in smaller, immature companies is generally considered higher risk as the market for their shares may be less liquid and more difficult to trade than that for more established companies. As a result, share price fluctuations may be greater. In addition, smaller, immature companies may not do so well in periods of adverse economic conditions. Where such companies have business models and competitive positions which are less well established, this could result in an increased likelihood of loss for investors.
- The Fund invests in China where difficulties with market volatility, political and economic instability including the risk of market shutdown, trading, liquidity, settlement, corporate governance, regulation, legislation and taxation could arise, resulting in a negative impact on the value of your investment.
- The Fund's concentration in a particular geographical area or industry may result in large movements in the share price in the short term.
- The Fund has exposure to foreign currencies and changes in the rates of exchange will cause the value of any investment, and income from it, to fall as well as rise and you may not get back the amount invested.

- The Fund's share price can be volatile due to movements in the prices of the underlying holdings and the basis on which the Fund is priced.

Further details of the risks associated with investing in the Fund can be found in the Key Investor Information Document or the Prospectus, copies of which are available at bailliegifford.com.
