Key Facts

Fund Manager:

Marc Khamayzer Since Aug-22
 Matt Ferrelli Since Aug-22

Management Co: Threadneedle Man. Lux. S.A.
 Umbrella Fund: Columbia Threadneedle (Lux) I
 SFDR Category: Article 6
 Fund Inception Date: 29/06/10
 Index: -
 Peer Group: -
 Fund Currency: USD
 Fund Domicile: Luxembourg
 Portfolio Size: £211.4m
 No. of Securities: 90
 Share Class Price: 15.1411
 All information expressed in GBP

Fund Objective & Policy

The Fund aims to increase the value of your investment over the long term. The Fund invests in commodities using derivatives (complex instruments). Commodities are physical materials such as oil, agricultural products, and metals. Derivatives are used to take long positions (which will directly reflect market movements) and short positions (which will respond positively when markets go down) in diversified commodity indices to create under and overweight positions in individual commodities and commodity sectors, as well as alter the location of that weight on the curve. It is not intended that the use of derivatives will result in any net short positions in commodities. The use of derivatives may create leverage. Where leverage is created, the net asset value of the Fund may experience more fluctuation than if there were no leverage. The Fund may also use derivatives for hedging purposes or to manage the Fund more efficiently. The Fund may also invest in asset classes and instruments different from those stated above. The Fund is actively managed in reference to the Bloomberg Commodity Index. The index is broadly representative of the securities in which the Fund invests, and provides a suitable target benchmark against which Fund performance will be measured and evaluated over time. The fund manager has discretion to select investments with weightings different to the index, and that are not in the index, and the Fund may display significant divergence from the index.

Risk & Reward Profile

UCITS SRRI

The Risk and Reward Indicator demonstrates where the Fund ranks in terms of its potential risk and reward. Please see the Key Investor Information Document for more information.

Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund may enter into financial transactions with selected counterparties. Any financial difficulties arising at these counterparties could significantly affect the availability and the value of Fund assets.
- The Fund invests in markets where economic and regulatory risk can be significant. These factors can affect liquidity, settlement and asset values. Any such event can have a negative effect on the value of your investment.
- The Fund's assets may sometimes be difficult to value objectively and the actual value may not be recognised until assets are sold.
- The Fund may invest materially in derivatives (complex instruments linked to the rise and fall of the value of other assets). A relatively small change in the value of the underlying investment may have a much larger positive or negative impact on the value of the derivative.
- Leverage occurs when economic exposure through derivatives is greater than the amount invested. Such exposure, and the use of short selling techniques, may lead to the Fund suffering losses in excess of the amount it initially invested.
- The Fund invests in derivatives rather than physical securities. Therefore there is a risk that the price of the instrument does not accurately reflect the price of the underlying security/commodity.
- As the Fund gains exposure to Commodities, it is exposed to factors affecting a particular industry or commodity for example, weather, embargoes, tariffs and international economic, political and regulatory developments and trading activities in commodities and related contracts.
- The fund typically carries a risk of high volatility due to its portfolio composition or the portfolio management techniques used. This means that the fund's value is likely to fall and rise more frequently and this could be more pronounced than with other funds.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Typical Investor Profile

This Portfolio is suitable for investors who:

- seek capital appreciation;
- seek portfolio diversification within their investment through exposure to commodities;
- have a high risk tolerance;
- can tolerate potentially high volatility in value of their investment;
- have a long term investment time horizon.

Holdings & Asset Allocation

Weightings (%)

Commodities	Fund
Gold	12.5
Brent Crude Oil	11.0
Crude Oil	9.5
Natural Gas	7.7

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 30/09/25. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit www.columbiathreadneedle.com/fees.
