*12 Month Yield = (Sum of Dividends) / (Ending NAV). The 12 Month yield is calculated based on the sum of the distributions over the previous 12 months and the latest NAV. The 12 month yield may be higher or lower than the actual annual dividend yield. A positive distribution yield does not imply positive return. Dividends are not guaranteed. Past dividends are not indicative of future dividends.*

*Investors should not make any investment decision solely based on information contained in the table above. You should read the relevant offering document (the Key Information Document (PRIIPs/UCITS KID)) of the fund for further details including the risk factors.*

*The actual costs can be found in the annual reports and are deducted each time the net asset value is calculated. The value of the investment is reduced by these costs. As disclosed in the most recent Annual Report, the ongoing charges calculation excludes performance fees, but includes management and applied services fees. The effective Applied Service Fee is accrued at each calculation of the Net Asset Value and included in the ongoing charges of each Share Class. The investment will be reduced by the payment of the above mentioned fees.*

## Fund Objectives

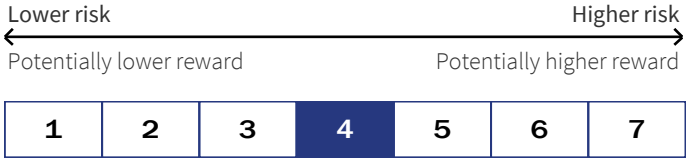
The aim of this Fund is to achieve income and long-term capital growth over a period of five years or more.

## Investment Horizon

This Fund may not be suitable for investors who plan to withdraw their contribution within five years.

## Risk Indicator

The information shown below is from the UCITS KIID.



The risk category is calculated using historical performance data and may not be a reliable indicator of the Fund's future risk profile.

The risk category shown is not guaranteed and may shift over time. The lowest category does not mean risk free.

### Why is this Sub-Fund in this category?

The capital of the Sub-Fund is not guaranteed. The Sub-Fund is invested in financial markets and uses techniques and instruments which are subject to some levels of variation, which may result in gains or losses.

## Additional Risk

**Counterparty Risk:** failure by any counterparty to a transaction (e.g. derivatives and securities lending) with the Fund to meet its obligations may adversely affect the value of the Fund. The Fund may receive assets from the counterparty to protect against any such adverse effect but there is a risk that the value of such assets at the time of the failure would be insufficient to cover the loss to the Fund.

**Hedging Risk:** Currency Hedging within the Fund seeks to reduce the impact of exchange rate movements of the investments' currencies relative to the fund's base currency. Over a period of time the hedging strategy itself may create a positive or negative impact to the value of the Fund, mainly due to differences in short-term interest rates between the currencies.

**Inflation Linked Bond Risk:** unlike other bonds, an inflation protected security (such as index linked gilts) reduces the negative effect of inflation on its real value. The market value of such securities will be affected both by the market's perception of future movements in interest rates and the future rate of inflation. Therefore the market value of such securities (and the value of the Fund) may not move in line with inflation rates in the short to medium term.

**Emerging Market Risks:** emerging markets or less developed countries may face more political, economic or structural challenges than developed countries. As a result, investments in such countries may cause greater fluctuations in the Fund's value than investments in more developed countries.

**Currency Risk:** the Fund holds investments denominated in currencies other than the base currency of the Fund. As a result, exchange rate movements may cause the value of investments (and any income received from them) to fall or rise affecting the Fund's value.

# Additional Information (Continued)

**Interest Rate Risk:** fluctuations in interest rates will change the value of bonds, impacting the value of the Fund. Generally, when interest rates rise, the value of the bonds fall and vice versa. The valuation of bonds will also change according to market perceptions of future movements in interest rates.

Further explanation of the risks associated with an investment in this Fund can be found in the prospectus.

## Subscription Redemption

Your orders to buy, sell or transfer shares in the Fund, must be received by the Administrator by 12 noon on any working day to receive that day's Fund price. Please note that if your order is placed by an intermediary or Financial Adviser, they may require extra processing time.The Net Asset Value of this Fund is calculated on a daily basis.

Minimum initial investment: £100,000
Minimum subsequent investment: £5,000

## How to Invest

**Before making an investment, investors should read the relevant Prospectus and the Key Investor Information Document (particularly for UK investors) / Key Information Document / scheme documents, which provide full product details including investment charges and risks. These documents are available in English or in your national language (if available) at axa-im.com.** The information contained herein is not a substitute for those documents or for professional external advice.

Retail Investors
Retail investors should contact their Financial intermediary.

## ESG Metrics Definition

Our approach to ESG measurement seeks to combine qualitative and quantitative techniques. The tree rating shown in this report is a simple pictorial representation of the overall ESG rating of the fund's portfolio. A fund which has 1 tree has a poor ESG rating, whereas a fund with 5 trees has a high ESG rating. For more information on our ESG standards, approach and methodology please visit: Putting ESG to work | AXA IM Core (axa-im.com).
ESG relative rating is calculated as the difference between the ESG absolute rating of the portfolio and the ESG absolute rating of benchmark. If ESG Relative rating is positive (negative), this means that the portfolio has a higher (lower) ESG absolute rating than the benchmark.
CO2 relative intensity is calculated as the difference between the intensity of the fund (expressed in tCO2/M€ Revenues) and the one of benchmark.
If CO2 Relative intensity is green, it means that the intensity of portfolio is lower than that of the benchmark. If CO2 Relative intensity orange, it means that the intensity of the portfolio is higher than that the benchmark. If CO2 Relative intensity is yellow, it means that intensity of the portfolio is similar than that of the benchmark.
ESG indicators are for informational purposes only.
The portfolio does not present any regulatory or contractual objectives on ESG indicators.

This marketing communication does not constitute on the part of BNPP Asset Management a solicitation or investment, legal or tax advice. This material does not contain sufficient information to support an investment decision. The information contained herein is intended solely for the entity and/or person(s) to which it has been delivered, unless otherwise allowed under applicable agreements.

The tax treatment associated with holding, buying or disposing of shares or units in a fund depends on the status or tax treatment of each investor and may be subject to change. Potential investors are strongly encouraged to seek the advice of their own tax adviser.

Due to its simplification, this document is partial and opinions, estimates and forecasts herein are subjective and subject to change without notice. There is no guarantee forecasts made will come to pass. Data, figures, declarations, analysis, predictions and other information in this document is provided based on our state of knowledge at the time of creation of this document. Whilst every care is taken, no representation or warranty (including liability towards third parties), express or implied, is made as to the accuracy, reliability or completeness of the information contained herein. This material does not contain sufficient information to support an investment decision.

Past performance is not a guide to current or future performance, and any performance or return data displayed does not take into account commissions and costs incurred when issuing or redeeming units. The value of investments, and the income from them, can fall as well as rise and investors may not get back the amount originally invested. Exchange-rate fluctuations may also affect the value of their investment. Due to this and the initial charge that is usually made, an investment is not usually suitable as a short term holding. Commissions and costs have an adverse effect on the performance of the fund.

The Fund's characteristics do not protect the investors from the potential effect of inflation over time. The investments and/or any potential income generated during the period will not be adjusted by the rate of inflation over the same period. Thus, the return on the fund adjusted from the rate of inflation could be negative. Consequently, the inflation might undermine the performance and/or the value of your investment.

The Fund referenced herein has not been registered under the United States Investment Company Act of 1940, as amended, nor the United States Securities Act of 1933, as amended. None of the shares may be offered or sold, directly or indirectly in the United States or to any US Person unless the securities are registered under the Act, or an exemption from the registration requirements of the Act is available. ## Glossary

Volatility (%): is an indicative measure of degree of variation of an asset's price changes over time.

Relative Risk/Tracking Error (%): measures, in standard deviation, the fluctuation of returns of a portfolio relative to the fluctuation of returns of a reference index. The tracking error can be viewed as an indicator of how actively a fund is managed. The lower the number the closer the fund's historic performance has followed its benchmark.

Sharpe ratio: is the measure of the risk-adjusted excess return over risk free rate of a financial portfolio and is used to compare the excess return of an investment to its risk. The higher the Sharpe ratio the better the return compared to the risk taken.

Information Ratio (IR): is a measurement of portfolio returns above the returns of a benchmark to the volatility of those excess returns. The IR is used to compare excess return over a benchmark to excess risk over a benchmark. E.g : A manager who outperforms a benchmark by 2% p.a. will have a higher IR than a manager with the same outperformance who has taken more risk.
