

# HL MODERATELY ADVENTUROUS MANAGED

April 2025

HARGREAVES  
LANSDOWN

**DAVID SMITH**  
Senior Fund Manager

**ZIAD GERGI**  
Head of Multi-Manager

## INVESTMENT OBJECTIVE

The Fund aims to maximise total returns for a specified level of risk ranging between 70% and 90% of the forecasted long-term volatility of global equities as represented by the MSCI All Countries World Index (GBP Total Return, Net) over rolling 5-year periods. The Fund's volatility is assessed using forecasted volatility figures at least monthly. The Fund's volatility may not remain within the risk range and,

accordingly, there may be periods, for example in extreme market conditions, when the Fund's volatility either exceeds or falls below this range.

We compare our performance to the IA Mixed Investment 40-85% Shares sector average to help you understand how we have performed against other funds with a similar investment mix.

## WHY INVEST IN A HL MULTI-MANAGER FUND?

- Professional management from one of the largest and best-resourced fund research teams in the UK.
- Broad exposure to a range of investment styles in one, convenient fund.
- Our size and scale allows us to negotiate significant discounts with some of the underlying managers to reduce costs.
- Access to some managers not widely available to the retail market.

Any changes we make within our Multi-Manager funds are not subject to capital gains tax. An investor may only be subject to capital gains tax, once their investment is sold.

## INVESTMENT PROCESS

As part of the investment process, the managers will use strategic asset allocation to help guide the Fund's longer term allocation to different asset classes. The managers will look to adjust the strategic asset allocation periodically, to consider revised assumptions around the expected return and risk of different asset classes, as well as changing market conditions.

In seeking to improve the Fund's performance, or reduce risk, the managers may also engage in tactical asset allocation decisions. This involves adjusting the Fund's allocations to take advantage of shorter term market trends, market forecasts, or economic conditions.

We believe our quantitative analysis is one of the major differentiating factors between ourselves and the rest of the industry. Using in-house generated statistical programs, our team create a forensic analysis of fund managers to understand what lies behind the raw performance numbers.

Our fund managers and research analysts use this analysis when conducting several hundred fund manager interviews each year. The combination of quantitative and qualitative analysis allows us to identify funds we believe have the greatest potential for long-term outperformance.

We are looking to invest in funds managed by experts with a passion for investment and we want these experienced fund managers to work in a culture that promotes and incentivises strong long-term performance.

## RISK SUMMARY

The value of investments and any income can fall, therefore investors could get back less than invested. Neither capital nor income is guaranteed. Investments should be regarded as long-term, which is five years or more. Past performance is not a guide to future returns. Tax rules can change and the value of any benefits will depend on personal circumstances.

Before investing in this fund please read the Key Investor Information document. Please note this factsheet is not personal advice and should not be viewed as a promotion of any of the individual underlying funds profiled. The selection of the underlying funds does not take into consideration personal circumstances. HL offer an advisory service for investors who are unsure whether an investment is suitable for their circumstances.

The fund's strategy, and therefore level of risk, can change over time. Economic factors such as interest rates, inflation and supply and demand can affect all investments.

Emerging markets are generally less well regulated than the UK and it can sometimes be difficult to buy and sell investments in these areas. Political and economic instability are more likely, making these funds higher risk than those investing in more regulated and developed markets.

This fund invests in smaller companies, which are more volatile and sometimes more difficult to trade than larger companies.

This fund invests in high yield bonds, which carry a greater risk of default than investment grade corporate bonds. Economic conditions will also have a greater effect on their price.

This fund is permitted to use derivatives such as warrants, options and futures for 'Efficient Portfolio Management' (EPM). They can be used to effectively take a position (or reduce an existing position) in an investment, allowing positions to be altered more quickly and cost-effectively than dealing directly. The use of these instruments can, under certain circumstances, increase volatility and risk.

**NOTES** – Past performance data sourced from Lipper IM/Hargreaves Lansdown for period ending 30/04/2025, extracted 08/05/2025 and correct as at time of writing.
