Emerging Markets and Peripheral Europe exposures are denominated in both USD and local currency. Local currency exposure is reflected in Non-US Dollar as well as in Emerging Markets and Peripheral Europe exposures.

Legg Mason Western Asset Macro Opportunities Bond Fund Class X Acc. (H) (GBP)

Investment risks

The fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the fund may not be able to repay the investment or pay the interest due on it, leading to losses for the fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation.

Derivatives: The Fund makes significant use of derivatives. The use of derivatives can result in greater fluctuations of the fund's value and may cause the fund to lose as much as or more than the amount invested.

Liquidity: In certain circumstances it may be difficult to sell the fund's investments because there may not be enough demand for them in the markets, in which case the fund may not be able to minimise a loss on such investments.

Low rated bonds: The fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Emerging markets investment: The fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Asset-backed securities: The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the fund. These types of investments may also be difficult for the fund to sell quickly.

Fund currency: Changes in exchange rates between the currencies of investments held by the fund and the fund's base currency may negatively affect the value of an investment and any income received from it.

Hedging: The fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the fund and base currency of the fund itself (hedging). However, hedging transactions can also expose the fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the fund.

Interest rates: Changes in interest rates may negatively affect the value of the fund. Typically as interest rates rise, bond values fall.

Fund counterparties: The fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

Hedged class currency: The value of your investment may fall due to changes in the exchange rate between the currency of your share class and the base currency of the fund. Efforts will be made to try to protect the value of your investment against such changes, but such efforts may not succeed.

For further explanation on the risks associated with an investment in the fund, please refer to the section entitled "Risk Factors" in the base prospectus and "Primary Risks" in the fund supplement.

A temporary negative cash position may be due to (1) unsettled trade activity (2) permitted purposes, such as borrowing or derivatives use, if allowed by the prospectus.

Definitions

Risk and reward profile: There is no guarantee that the fund will remain in the indicator category shown above and the categorisation of the fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this fund. The lowest category does not mean a risk-free investment. The fund does not offer any capital guarantee or protection.

Effective duration: Average Duration equals the weighted average maturity of all the cash flows in the portfolio and gives an indication of the sensitivity of a portfolio's bond prices to a change in interest rates. The higher the duration, the more sensitive the portfolio is to interest rate changes. Effective Duration is a calculation for bonds with embedded options (Not every portfolio will purchase bonds with embedded options). It takes into account the expected change in cash flows caused by the option, as interest rates change. If a portfolio does not hold bonds with embedded options, then the Effective Duration will be equal to the Average Duration.

Credit quality breakdown: Nationally Recognised Statistical Rating Organisations (NRSROs) assess the likelihood of bond issuers defaulting on a bond's coupon and principal payments. The weighted average credit quality by Western Asset Management assigns each security the higher rating from three NRSROs (Standard & Poor's, Moody's Investor Services and Fitch Ratings, Ltd.). If only one NRSRO assigns a rating, that rating will be used. Securities that are not rated by all three NRSROs are reflected as such. The lower the overall credit rating, the riskier the portfolio. The credit rating is expressed as a regular letter rating (from high to low quality): AAA, AA, A, BBB, BB, ...D.

Morningstar Analyst Rating™: Morningstar Analyst Rating™ Source: Morningstar. All Rights Reserved. The Morningstar Analyst Rating™ is subjective in nature and reflects Morningstar's current expectations of future events/behaviour as they relate to a particular fund. Because such events/behaviour may turn out to be different than expected, Morningstar does not guarantee that a fund will perform in line with its Morningstar Analyst Rating™.
