

MFS Meridian® Funds

Emerging Markets Debt Local Currency Fund

As of 30 April 2026

Fact Sheet

Investment in the fund may involve a high degree of risk and may not be suitable for all investors. Past performance does not predict future returns and your capital is at risk. The value of the fund can be volatile and could decrease substantially in a short period of time. Investors should consider the risks, including lower returns, related to currency movements between their investing currency and the portfolio's base currency, if different. Investors should not rely on this document alone to make investment decisions and the sales prospectus and Key Investor Information Documents (KIID) should be carefully considered before making any investment in the fund. **The fund specific risks include: bond risk, emerging markets risk, derivatives risk, high yield risk and local currency risk. These relevant risks, as associated with this fund, are highlighted and defined at the end of this document.**

Objective

Seeks total return, measured in US dollars.

Fund benchmark

JPMorgan Government Bond Index Emerging Markets Global Diversified

The Fund invests primarily in emerging market local currency denominated sovereign debt securities and currencies.

Key Points:

- Disciplined risk management approach focuses on calibrating and managing exposures to both country-specific and global risk factors
- Fundamentally-driven investment process focuses on country-level macroeconomic imbalances and sovereign risks to identify alpha opportunities
- Seeking to anticipate and position for adjustments needed to restore macroeconomic balances by establishing positions in rates and currencies to capitalize on expected price movements

Portfolio structure (%)

■ Bonds (99.7)
 ■ Cash & Cash Equivalents (6.5)

Stocks (-0.5%)
 -5.7% Other. Other consists of: (i) currency derivatives and/or (ii) any derivative offsets.

Past performance is not a reliable indicator for future results. All financial investments involve an element of risk. The value of investments may rise and fall so you may get back less than originally invested.

Investors should consider the risks, including lower returns, related to currency movements between their investing currency and the portfolio's base currency, if different.

Other share classes are available for which performance and expenses will differ.

Returns would have been lower had sales charges, of up to 6% of the net asset value (NAV), or any commissions, fees or other charges that your financial intermediary may charge been reflected.

Please note that this is an actively managed product.

It is expected that the Fund's deviation from the benchmark will be significant.

Performance results reflect ongoing charges and any applicable expense subsidies and waivers in effect during the periods shown. All historic results assume distributions within the fund and/or the share class are reinvested.

The source for all fund data is MFS. Source for benchmark performance: SPAR, FactSet Research Systems Inc.

Fund Inception Date: 26 March 2009

[^] Results represent the percent change in NAV.

Periods less than one year are actual, not annualized.

[†] Ongoing charges are expressed at an annual rate as a percentage of net assets and are based on expenses for the semi-annual period ending July 31 or annual period ending January 31. For a Class with less than the full period of data available, or where an adjustment is necessary to reflect current charges, the ongoing charges figure is an estimate. Ongoing charges may vary from year to year. Please see the KIID of the relevant Class for the most recent expense information.

¹ Base Currency-Hedged share classes aim to reduce exchange rate and return fluctuations between the applicable non-base currency hedged share class and the unhedged currency class of the fund. From time-to-time shareholder transactions in the share class could result in a gain or a loss, which could be significant, in the share class value that is attributable to the adviser's hedging activities rather than to its investment management activities. Other share classes will not share in these gains or losses.

² The fund's investment policies changed to permit increased derivatives usage on 31 October 2014; performance shown before this date reflects the fund's policies prior to this change.

Class I shares are only available to certain qualifying institutional investors.

Class W shares are available to discretionary portfolio management or independent advisory accounts, clients of financial intermediaries otherwise prohibited from receiving compensation from the Fund, and to employees of MFS and its affiliates.

CREDIT QUALITY[†] (% OF TOTAL NET ASSETS)

Other Not Rated	6.4

Avg. credit quality: BBB

TRAILING 3-YEAR RISK MEASURES VS. BENCHMARK (W1USD)

Standard Deviation	9.38 vs. 8.48
--------------------	---------------

Standard Deviation is an indicator of the portfolio's total return volatility, which is based on a minimum of 36 monthly returns. The larger the portfolio's standard deviation, the greater the portfolio's volatility.

RISK AND REWARD PROFILE - CLASS W1USD

◀ Lower Risk							Higher Risk ▶	
(typically lower rewards)							(typically higher rewards)	
1	2	3	4	5	6	7		

The rating is based on past volatility of returns and may be different in the future or for other classes of the fund.

See the fund's offering documents for more details, including information on fund risks and expenses.

The offering documents (sales prospectus and Key Investor Information Documents (KIIDs)), articles of incorporation and financial reports are available to investors at no cost in paper form or electronically at meridian.mfs.com, at the offices of the paying agent or representative or from your financial intermediary. KIIDs and the sales prospectus and other documents are available in English. **United Kingdom:** Facilities Agent: MFS International (UK) Ltd., One Carter Lane, London, EC4V 5ER UK. Tel: 44.(0)20.7429.7200.

MFS Meridian Funds is an investment company with a variable capital established under Luxembourg law. MFS Investment Management Company (Lux) S.à.r.l. is the management company of the Funds, having its registered office at 4, Rue Albert Borschette, L-1246, Luxembourg, Grand Duchy of Luxembourg (Company No. B.76.467). The Management Company and the Funds have been duly authorised by the CSSF (Commission de Surveillance du Secteur Financier) in Luxembourg.

MFS Meridian Funds was recognised under Section 264 of the Financial Services and Markets Act of 2000 (reference number 435996) and is now being marketed in the U.K. under the U.K. Overseas Fund Regime (OFR). The Fund is not authorised by the

FCA in the UK. U.K. investors should note that they may be entitled to refer complaints to the UK Financial Ombudsman Service and that holding of shares in the funds and any claims for losses relating to the Management Company or the Depositary are not covered under the UK Financial Services Compensation Scheme, in the event that either person should become unable to meet its liabilities to, or by any similar scheme in Luxembourg. Please seek independent financial advice before making an investment decision.

Important Data Methodologies

Top holdings, portfolio characteristics and weightings do not reflect the effect of exposure/weightings for hedging of hedged share classes. Full holdings and net assets do reflect this hedging.

Portfolio characteristics are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. The portfolio is actively managed, and current holdings may be different.

Average Effective Maturity is a weighted average of maturity of the bonds held in a portfolio, taking into account any prepayments, puts, and adjustable coupons which may shorten the maturity. Longer-maturity funds are generally considered more interest-rate sensitive than shorter maturity funds.

Average Effective Duration is a measure of how much a bond's price is likely to fluctuate with general changes in interest rates, e.g., if rates rise 1.00%, a bond with a 5-year duration is likely to lose about 5.00% of its value.

Weighted average yield-to-maturity of all portfolio holdings excluding cash & derivatives. Yield-to-maturity is the annual anticipated yield on a portfolio if all securities are held until maturity.

Weighted average yield-to-worst of all portfolio holdings excluding cash & derivatives. Yield-to-worst is the annual estimate of the portfolio yield considering factors such as call provisions, prepayments, and other features that may affect a bond's cash flow; and assumes no default. It is an estimated characteristic at a point in time and is not a measure of portfolio performance.

† The Average Credit Quality (ACQR) is a market weighted average (using a linear scale) of securities included in the rating categories. For all securities other than those described below, ratings are assigned utilizing ratings from Moody's, Fitch, and Standard & Poor's and applying the following hierarchy: If all three agencies provide a rating, the consensus rating is assigned if applicable or the middle rating if not; if two of the three agencies rate a security, the lower of the two is assigned. If none of the 3 Rating Agencies above assign a rating, but the security is rated by DBRS Morningstar, then the DBRS Morningstar rating is assigned. If none of the 4 rating agencies listed above rate the security, but the security is rated by the Kroll Bond Rating Agency (KBRA), then the KBRA rating is assigned. Other Not Rated includes other fixed income securities not rated by any rating agency. Ratings are shown in the S&P and Fitch scale (e.g., AAA). All ratings are subject to change. The portfolio itself has not been rated by any rating agency. The credit quality of a particular security or group of securities does not ensure the stability or safety of an overall portfolio. The quality ratings of individual issues/issuers are provided to indicate the credit-worthiness of such issues/issuer and generally range from AAA, Aaa, or AAA (highest) to D, C, or D (lowest) for S&P, Moody's, and Fitch respectively.

Important risk considerations

The fund may not achieve its objective and/or you could lose money on your investment in the fund. ■ **Bond:** Investments in debt instruments may decline in value as the result of, or perception of, declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall). Therefore, the portfolio's value may decline during rising rates. Portfolios that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. The price of an instrument trading at a negative interest rate responds to interest rate changes like other debt instruments; however, an instrument purchased at a negative interest rate is expected to produce a negative return if held to maturity. ■ **Emerging Markets:** Emerging markets can have less market structure, depth, and regulatory, custodial or operational oversight and greater political, social, geopolitical and economic instability than developed markets. ■ **Derivatives:** Investments in derivatives can be used to take both long and short positions, be highly volatile, involve leverage (which can magnify losses), and involve risks in addition to the risks of the underlying indicator(s) on which the derivative is based, such as counterparty and liquidity risk. ■ **High Yield:** Investments in below investment grade quality debt instruments can be more volatile and have greater risk of default, or already be in default, than higher-quality debt instruments. ■ **Local Currency:** The value of securities denominated in emerging market currencies are affected by changes in currency rates or exchange control regulations, restrictions or prohibition on the repatriation of currencies, application of tax laws, including withholding taxes, changes in government administration or economic or monetary policy or changed circumstances in dealings between nations. ■ Please see the offering documents or Information Memorandum for more details, including information on fund risks and expenses.

Benchmark and vendor disclosures

JPMorgan GBI-EM Global Diversified Index is a market capitalization weighted index that is designed to measure the performance of local currency government bonds issued in emerging markets. The index includes only the countries which give access to their capital market to foreign investors; it therefore excludes China, India, and Thailand. Individual country weights in the index are limited to 10% in order for the index to remain fully diversified.

It is not possible to invest directly in an index.

Information has been obtained from sources believed to be reliable but J.P. Morgan does not warrant its completeness or accuracy. The Index is used with permission. The Index may not be copied, used, or distributed without J.P. Morgan's prior written approval. Copyright 2026, J.P. Morgan Chase & Co. All rights reserved.
