Report of the Authorised Corporate Director

Continued

The Authorised Corporate Director (the ACD) and abrdrn Investment Management Limited are wholly owned subsidiaries of abrdrn plc, and are accordingly associates. The Investment Adviser has appointed abrdrn Inc and abrdrn Asia Limited as sub-advisers. The Investment Advisers have the authority of the ACD to make decisions on its behalf in all aspects of the investment management of the investments and other property of the Company. The main terms of the agreement with each investment adviser are that it should have the authority of the ACD to make decisions on its behalf in all aspects of the investment management of the investments and other property of the Company, including the Company's powers to enter into hedging transactions relating to efficient portfolio management. The adviser's powers extend to all of the property of the Company except any part which the ACD excludes from the adviser's powers. The adviser is to report details of each transaction to the ACD and to confer with the ACD when required by it. The ACD will notify the adviser of additional cash available for investment.

The Authorised Corporate Director of the Company is abrdrn Fund Managers Limited, a private company limited by shares which was incorporated in England and Wales on 7 November 1962. Its ultimate holding company is abrdrn plc, which is incorporated in Scotland.

Financial details and Fund Managers' reviews of the individual funds for the period ended 31 August 2024 are given in the following pages of this report.

Each fund has an individual investment objective and policy and each differs in regard to the extent to which they concentrate on achieving income or capital growth. There may be funds added to the umbrella of abrdrn OEIC II (with consent of the FCA and the Depositary) in the future.

The funds are valued on a mid-price basis and dealt at a single price regardless of whether a purchase or sale is being affected.

The daily price for each fund appears on the abrdrn website at [abrdrn.com](https://www.abrdrn.com).

The funds are segregated portfolios of assets and, accordingly, the assets of a fund belong exclusively to that fund and shall not be used to discharge directly or indirectly the liabilities of, or claims against, any other person or body, including the Company, or any other fund, and shall not be available for any such purpose.

The shareholders are not liable for the debts of the Company.

All fees charged by the Investment Adviser will be borne by the ACD.

Global Emerging Markets Equity Unconstrained Fund is no longer open to investors, having redeemed all share on 14 January 2016. ASI UK Recovery Equity Fund is no longer open to investors, having redeemed all shares on 22 October 2020. abrdrn UK Growth Equity Fund is no longer open to investors, having merged into abrdrn UK Sustainable and Responsible Investment Equity Fund on 3 March 2023. abrdrn UK High Alpha Equity Fund is no longer open to investors, having merged into abrdrn UK Sustainable and Responsible Investment Equity Fund on 3 March 2023. abrdrn Europe ex UK Growth Equity Fund is no longer open to investors, having merged into abrdrn Europe ex UK Equity Fund on 3 March 2023. abrdrn Asian Pacific Growth Equity Fund is no longer open to investors, having merged into abrdrn Asia Pacific Equity Fund on 12 May 2023. abrdrn Emerging Markets Opportunities Equity Fund is no longer open to investors, having merged into abrdrn Emerging Markets Equity Fund on 12 May 2023. abrdrn UK High Income Equity Fund is no longer open to investors, having merged into abrdrn UK Income Equity Fund in abrdrn OEIC I on 27 October 2023. abrdrn American Income Equity Fund is no longer open to investors, having closed on 14 May 2024.

Subsequent to the period end, the ACD merged the abrdrn Global Focused Equity Fund into abrdrn Global Equity Fund in abrdrn OEIC I and abrdrn Investment Grade Corporate Bond Fund into abrdrn Sterling Corporate Bond Fund in abrdrn OEIC II on 27 September 2024.

It is the intention of the ACD to terminate the funds at a later date once the residual assets and liabilities are settled. As a result the financial statements for these funds have not been prepared on a going concern basis.

The military offensive from Russia against Ukraine since February 2022 continues to pose widespread sanctions on Russian assets. Geopolitical events can adversely affect assets of funds and performance thereon. To ensure the fair treatment of investors, abrdrn's Investor Protection Committee (IPC) undertakes regular reviews of market liquidity across each asset class and fund, making appropriate adjustments where necessary.

abrdrn's Valuation and Pricing Committee (VPC) also continue to review the valuation of assets and the recoverability of income from those assets, making appropriate adjustments where necessary. The VPC is made up of a wide range of specialists across abrdrn with a wide range of experience in asset pricing.

Report of the Authorised Corporate Director

Developments and prospectus updates since 1 March 2024

- On 15 March 2024, Fraser Tulloch was appointed as a director of abrdn Fund Managers Limited.
- On 14 May 2024, abrdn American Income Equity Fund closed.
- On 14 May 2024, the benchmarks for the abrdn UK Smaller Companies Fund and abrdn Investment Grade Corporate Bond Fund were updated to reflect a rebrand by the benchmark provider. These changes neither alter the constituents of the benchmark, nor do they impact the relevant fund's risk profile.
- On 17 June 2024, the abrdn High Yield Bond Fund ZA Inc and the abrdn Global Focused Equity Fund Institutional Regulated Acc were closed.
- The list of funds managed by the ACD was updated, where appropriate;
- Performance and dilution figures were refreshed, where appropriate;
- The list of sub-custodians was refreshed, where appropriate.
- The list of eligible markets was refreshed, where appropriate.
- The list of sub-investment advisors to the funds was refreshed, where appropriate.
- The risk disclosures in relation to the funds were refreshed, where appropriate.

Assessment of Value

In 2017 the Financial Conduct Authority (FCA) published the final Asset Management Market Study. This introduced (among other reforms) new governance rules with the aim of enhancing duty of care and ensuring the industry acts in investors' best interests. The rules were outlined in the FCA policy statement PS18/8 and came into effect from 30 September 2019. As a result, abrdn Fund Managers Limited is required to perform a detailed annual assessment, determining whether our funds are "providing value to investors". The resulting findings will be published on a composite basis throughout the year, and can be found on the 'Literature' pages of our website.

Climate-related Financial Disclosures

The recommendations by the Taskforce for Climate-related Financial Disclosures (TCFD) – initiated by the Financial Stability Board in 2015 and adopted in 2017 – provide organisations with a consistent framework for disclosing financial impacts of climate-related risks and opportunities. The disclosure in line with TCFD recommendations enables external stakeholders to gain a better understanding of the climate-related risks and opportunities (including how they are managed) that are likely to impact the organisation's future financial position as reflected in its income statement, cash flow statement, and balance sheet. The TCFD has developed 11 recommendations which are structured around four thematic areas, notably governance, strategy, risk management and metrics and target. In Policy Statement 21/24 the Financial Conduct Authority (FCA) have created a regulatory framework for asset managers, life insurers and FCA-regulated pension providers to make climate-related disclosures consistent with the recommendations of the TCFD. As a result of the disclosure requirements abrdn OEIC II is required to perform a detailed annual assessment, determining financial impacts of climate-related risks and opportunities. The resulting findings are published at **Fund literature | abrdn**.

Investment Report

1 March 2024 – 31 August 2024

Global Overview

Global equities rose in sterling terms over the six months under review, despite persistent concerns over inflation and the risk of a recession in the US. Over the period, key central banks in Western economies raised interest rates faster and further than previously anticipated in an effort to counter multi-decade-high inflation. As a result, inflationary pressures began to ease in many countries. Investors were thus optimistic that there would be an end to monetary tightening and potential rate cuts in 2024. This market optimism buoyed stock markets around the world. However, while global economic growth held up better than expected, intensifying fears of a US recession weighed on sentiment somewhat towards the end of the period. Geopolitical tensions also continued to impact investor confidence, with the conflicts in the Middle East and Ukraine threatening to escalate while US-China relations deteriorated further.

The UK stock market similarly made strong gains over the period, with the FTSE 100 Index reaching a new all-time high in May. A more positive global outlook drove market gains, along with positive signs of inflation easing in the UK that led to the first interest-rate cut in four years by the Bank of England (BoE) in July. Also in July, the Labour Party gained a substantial majority in the UK general elections and early announcements from the new government supported a more positive view of the UK's domestic prospects. At the end of the period, a dip in oil prices led to weakness in the energy sector, while the prospect of interest-rate cuts in the US caused sterling to strengthen against the dollar, putting UK-listed stocks under further pressure.

Moving across to continental Europe, stock markets, as measured by the FTSE World Europe ex UK Index, performed well over the review period as inflation showed signs of stabilising and the European Central Bank (ECB) became the first of the three major Western central banks to cut interest rates in June. Signs of economic recovery and falling inflation in the eurozone boosted investor sentiment, despite the fact that there was uneven economic newsflow across the region. Furthermore, with inflation in the eurozone at its lowest level in more than three years, there were growing hopes that the ECB could cut interest rates for a second time. In June, snap elections in France prompted sharp declines in local stock prices amid concerns that a victory for the far-right could lead to looser fiscal policies. However, shares across the region nudged upwards towards the end of the period despite a mixed bag of quarterly earnings, ongoing concerns about the global economy's health and political developments in France.

In the US, stocks rose in sterling terms over the review period, with the technology sector, especially artificial intelligence (AI)-related stocks, largely leading the charge. Technology, and other growth-focused stocks, are especially sensitive to monetary policy moves and the prospect of rate cuts had a favourable effect on their future discounted earnings. The US Federal Reserve (Fed) maintained a restrictive policy stance throughout the period as the domestic economy remained robust, while investors had been hoping that encouraging inflation trends would lead to several interest-rate cuts before the end of the year. Fears of a US recession caused a sell-off in equities from mid-July to the start of August, but US stocks then rebounded to recover most of their losses before the end of the period.

Japanese equities rose higher in yen terms than in sterling over the period but lagged other world markets in aggregate. In February, the bellwether Nikkei 225 Index broke through its high of 38,900 – which had stood for 34 years – and quickly rose above 40,000 for the first time in its history, reaching a new peak of over 42,000 in mid-July. The rally was largely driven by exporters, which have benefited from the weak yen, and in particular the technology sector, where AI-related companies have done well. However, Japanese stocks retreated in late July on worries about the economic outlook both in Japan and overseas, since the economic data in Japan was generally weak over the period. The key event during the period was the first increase in interest rates for 17 years by the Bank of Japan (BoJ) in March. This was followed by a second hike in late July, which took the BoJ's benchmark rate to 0.25%. The monetary authorities justified the tighter monetary stance on the need to support the persistently weak yen and combat inflation.

Meanwhile, Asian markets made strong gains too in line with broader global markets. Sentiment was boosted by good corporate results and strength in the technology sector. The rally in the technology sector was driven by both a cyclical upturn in semiconductor pricing and strong incremental demand tied to the rise of AI. By country, Chinese stocks gained but underperformed amid ongoing concerns around its struggling property sector and trade tensions with the US, even as policymakers intervened to support the economy and the equity market. Stocks in Hong Kong fell, due to weak corporate results, softness in the renminbi and heavy foreign capital outflows. On the other hand, Indian equities made notable gains following the country's election results as cabinet appointments for Prime Minister Narendra Modi's new coalition government pointed to political continuity. Further market support came from the coalition's first Budget, which included measures to improve consumption, rural demand and employment. Technology-heavy markets in South Korea

Investment Report

1 March 2024 – 31 August 2024 continued

and Taiwan posted diverging fortunes, as the tech rally paused towards the period-end. Indonesia was a laggard after an unexpected increase in interest rates and weakness in the banking sector.

In fixed income, government and corporate bonds performed well over the period, as central banks started to cut interest rates amid declining inflation. Bond prices largely rose in March, but the second quarter was more volatile as government bond yields moved higher. Credit spreads were choppy but relatively unchanged by the quarter-end. Macroeconomic data finally started showing signs of a slowdown in the US with slightly softer labour markets, while inflation drifted lower. In terms of monetary policy, the ECB was the first of the major central banks to cut interest rates by 25 basis points (bps) in June, its first rate cut since 2019. This was followed by a second rate cut in September by another 25 bps, as annual eurozone inflation declined to 2.2% in August. Meanwhile, the BoE cut the base rate by 25bps at the start of August. Official data indicated the UK economy had expanded in the second quarter of the year due to strong performance in the services sector. Lastly, the Fed reduced rates in September for the first time since early 2020, cutting interest rates by 50 bps. Recent employment data has shown some signs of weakness, as a revision revealed around 68,000 fewer jobs added in the 12 months to March 2024. However, GDP figures were revised upward to an annualised 3.0% in the second quarter.

Outlook

The second half of 2024 is a critical period for markets as investors weigh up slowing economic data, US presidential changes and potential currency-market moves.

In the short term, investors' attention has turned from second-quarter earnings results to the US Federal Reserve's pending rate decision. The exact size of the rate cut is open for debate. While US data shows that the economy is slowing, it remains unclear whether the central bank has successfully engineered a 'soft landing' or if the US might slip into recession.

Meanwhile, data from other regions, with the exception of India, remains tepid. Even in countries where the central bank has already cut rates, the response from consumers and businesses, broadly, has been muted. This more cautious view of the macroeconomic growth outlook is reflected in sector performance and is consistent with the softer tone in management commentary post-results. Indeed, lower growth and declining inflation point to weak top-line growth for many businesses.

As well as a changing economic backdrop, investors can also expect increased political noise ahead of the US presidential election in November. Combined, these factors are likely to lead to further moves in currency markets.

September 2024

Sustainability Standards Group Report

Sustainability Standards Oversight

abrdn is responsible for managing several ethical funds. The funds are managed according to clearly defined investment mandates and the range of available investments is underpinned by established policies and independent research data on their ethical credentials.

Governance

Historically, the ethical criteria for the funds have been advised by the abrdn Ethical Funds Advisory Group, comprised of investors in the ethical funds and senior abrdn managers with involvement in managing and marketing the funds and their associated products.

In 2022, post an internal assessment and as a result of an evolution in abrdn’s sustainable fund governance processes, a decision was taken to wind-up the Ethical Funds Advisory Group. This assessment was conducted in consultation with the members of the Ethical Funds Advisory Group.

At the final meeting of the Ethical Funds Advisory Group it was agreed to move the oversight and application of the ethical criteria to abrdn’s recently formed Sustainability

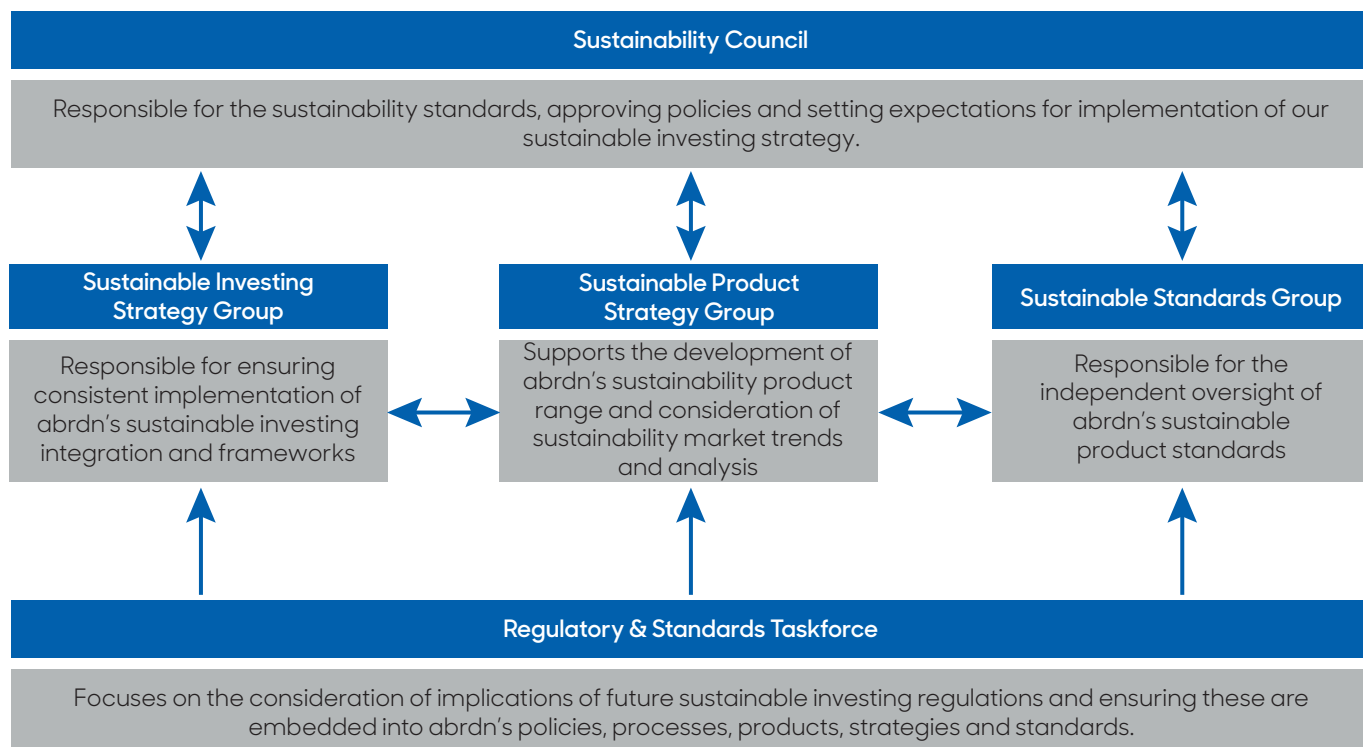

Standards Group. This Group oversees the criteria and application of sustainability standards across all of abrdn’s sustainable and ethical products. This Group was deemed to be highly effective at guiding investment its policies and standards, and ensuring greater consistency across abrdn’s sustainable product range, to meet changing customer expectations and market standards.

The Sustainability Standards Group is chaired by the Head of Sustainable Investing and meets regularly to:

- provide independent oversight and controls surrounding abrdn’s sustainability funds
- review investment and marketing reports
- ensure that abrdn’s sustainable investment process for its sustainability funds is observed

Through this Group, and the Sustainable Investment Oversight model highlighted below, abrdn remains focussed on undertaking market and customer research on sustainability issues, as it has done for the Ethical Funds. abrdn is also committed to considering current sustainability and ethical issues and trends, the implications for its funds, and reviewing and addressing customer queries.

abrdrn’s Sustainable Investment Oversight Model

Sustainability Standards Group Report

Continued

Ethical Investor Survey 2023

The overall objective of the 2023 survey was to update on client attitudes and perceptions to ethical investing to inform the development of the abrdn ethical investing approach. We asked for feedback on the importance of areas for consideration, as well as opinions on current issues that could affect the investment approach. The survey was sent to 6,813 investors* and received a 5.5% response rate.

Key Findings:

- Environmental factors continue to dominate in terms of investor importance.
- Environmental degradation, companies linked to deforestation, and companies that significantly contribute to climate change rated as the top three most important factors.
- Human rights' issues continue to rate highly for investors and rated joint third in importance from investors.
- Ethical issues for gaming companies received less interest than previous years but remains a concern for investors.

*Investors surveyed in 2023 are Pheonix (95%) and abrdn (5%) customers

Funds' Criteria

No changes were made to the criteria of the funds during this period. The ethical funds are invested according to the negative and positive criteria set out in the ethical funds approach document. The Funds do not invest in companies that fail the negative criteria and favour investment in companies that meet the positive criteria.

Voting Record – abrdn UK Ethical Equity Fund

abrdn votes on all holdings held in the fund except where for practical reasons, such as share-blocking, it is not appropriate to do so. For the interim period between 1 March 2024 to 31 August 2024, we voted at 32 company meetings and a total of 613 proposals on behalf of the abrdn UK Ethical Equity Fund.

Over the period we voted against several proposals relating to pay. At Edenred we opposed the approval of the remuneration policy for the Chair and CEO. Whilst improvements to structure were planned, we had concerns regarding the Long-Term Incentive and targets. This was particularly sensitive given the proposed 27% increase to the grant.

We voted against the remuneration report at Azelis Group due to insufficient disclosure under the Short-Term Incentive. The company provided achievement levels on financial metrics but no detail on non-financial metrics or metrics' targets. This does not allow shareholders to assess the stringency of the pay for performance alignment.

We also voted against Thule Group's remuneration report as the CEO and former CEO received much higher variable remuneration than the STI outcome. The discrepancy is unexplained. We consider improvement in disclosure is required as bonus targets are not disclosed retrospectively and there is no commentary on the sustainability metric achievement.

We expect the Audit Committee to be majority independent and therefore opposed the re-election of several non-independent directors at Atlas Copco, Hannover Rueck and Universal Music Group.

Further Information

If you would like to find out more about abrdn's Ethical Funds approach these can be found on our website www.abrdn.com, under **Fund Centre**.

For any additional information, please write to Dan Grandage, Head of Sustainable Investing, abrdn, 280 Bishopsgate, London EC2M 4AG.

Dan Grandage

Chair abrdn's Sustainability Standards Group
19th September 2024

Notes to the Financial Statements of abrdn OEIC II

Accounting Policies

For the six months ended 31 August 2024.

Basis of Accounting

The financial statements for each of the funds have been prepared under the historical cost basis, as modified by the revaluation of investments, and in accordance with the Statement of Recommended Practice (SORP) for Financial Statements of Authorised Funds issued by the Investment Management Association in May 2014 (IMA SORP 2014), Financial Reporting Standard (FRS) 102 and United Kingdom Generally Accepted Accounting Practice.

For all funds apart from abrdn American Income Equity Fund, abrdn Asian Pacific Growth Equity Fund, abrdn Emerging Markets Opportunities Equity Fund, abrdn Europe ex UK Growth Equity Fund, abrdn Global Focused Equity Fund, abrdn Investment Grade Corporate Bond Fund, abrdn UK Growth Equity Fund, abrdn UK High Alpha Equity Fund, abrdn UK High Income Equity Fund, ASI UK Recovery Equity Fund and Global Emerging Markets Equity Unconstrained Fund, the ACD has undertaken a detailed assessment, and continues to monitor, each fund's ability to meet its liabilities as they fall due, including liquidity, declines in global capital markets and investor redemption levels. Based on this assessment, the funds continue to be open for trading and the ACD is satisfied the funds have adequate financial resources to continue in operation for at least the next 12 months after the financial statements are signed and accordingly it is appropriate to adopt the going concern basis in preparing the financial statements.

Global Emerging Markets Equity Unconstrained Fund is no longer open to investors, having redeemed all share on 14 January 2016. ASI UK Recovery Equity Fund is no longer open to investors, having redeemed all shares on 22 October 2020. abrdn UK Growth Equity Fund is no longer open to investors, having merged into abrdn UK Sustainable and Responsible Investment Equity Fund on 3 March 2023. abrdn UK High Alpha Equity Fund is no longer open to investors, having merged into abrdn UK Sustainable and Responsible Investment Equity Fund on 3 March 2023. abrdn Europe ex UK Growth Equity Fund is no longer open to investors, having merged into abrdn Europe ex UK Equity Fund on 3 March 2023. abrdn Asian Pacific Growth Equity Fund is no longer open to investors, having merged into abrdn Asia Pacific Equity Fund on 12 May 2023. abrdn Emerging Markets Opportunities Equity Fund is no longer open to investors, having merged into abrdn Emerging Markets Equity Fund on 12 May 2023. abrdn UK High Income Equity Fund is no longer open to investors, having merged into abrdn UK Income Equity Fund on 27 October 2023. abrdn American Income Equity Fund is no longer open to investors, having closed on 14 May 2024.

Subsequent to the period end, the ACD merged the abrdn Global Focused Equity Fund into abrdn Global Equity Fund in abrdn OEIC I and abrdn Investment Grade Corporate Bond Fund into abrdn Sterling Corporate Bond Fund in abrdn OEIC II on 27 September 2024.

It is the intention to terminate the funds at a later date once the residual assets and liabilities are settled. As a result the financial statements for these funds have not been prepared on a going concern basis. Prior year financial statements for Global Emerging Markets Equity Unconstrained Fund, ASI UK Recovery Equity Fund, abrdn UK Growth Equity Fund, abrdn UK High Alpha Equity Fund, abrdn Europe ex UK Growth Equity Fund, abrdn Asian Pacific Growth Equity Fund, abrdn Emerging Markets Opportunities Equity Fund and abrdn UK High Income Equity Fund were also not been prepared on a going concern basis.

For the funds not prepared on a going concern basis, no adjustments were required to the financial statements to adjust assets or liabilities to their realisable values or to provide for liabilities arising from the decision to terminate the funds. No liabilities have been recorded for costs of the terminations as the intention is that the ACD will bear any such costs which may arise.

Distribution Policy

The revenue from the fund's investments accumulates during each accounting period. If revenue exceeds expenses during the period, the net revenue of the fund is available for distribution (or re-investment) at share class level to the shareholders in accordance with the OEIC Regulations. If expenses exceed revenue during the period, the net revenue shortfall may be funded from capital.

Notes to the Financial Statements of abrdn OEIC II

All funds pay a dividend distribution with the exception of abrdn Sterling Corporate Bond Fund, abrdn AAA Bond Fund, abrdn High Yield Bond Fund, abrdn Investment Grade Corporate Bond Fund and abrdn UK Government Bond Fund which pay an interest distribution.

Gains and losses on non-derivative investments and currencies, whether realised or unrealised, are taken to capital and are not available for distribution. For derivative investments, where positions are undertaken to enhance capital return, the gains and losses are taken to capital, otherwise where they generate revenue, the amounts are included as revenue or expense and affect distributions.

abrdrn AAA Bond Fund

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in Sterling-denominated bonds with a high degree of creditworthiness.

Performance Target: To achieve the return of the Markit iBoxx Sterling Non Gilts AAA plus 0.65% per annum over rolling three year periods (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in Sterling denominated bonds, such as government and corporate bonds (including asset backed and mortgage backed).
- The fund may invest in bonds issued anywhere in the world by governments and corporations, such as sub-sovereigns, inflation-linked, convertible, asset backed and mortgage backed bonds. The fund will employ techniques to reduce (hedge) risk related to currency movements on non-Sterling bonds.
- At the point of investment, bonds shall have a credit rating of "AAA-" or higher from at least one major rating agency such as Standard & Poor's, Moody's or Fitch, with the exception of any UK Government bond held by the fund (up to a 20% limit).
- The fund may also invest in other funds (including those managed by abrdrn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to identify bonds and derivatives based on analysis of global economic and market conditions (for example, interest rates and inflation) and analysis of a company's prospects and creditworthiness compared to that of the market.
- In seeking to achieve the Performance Target, the Markit iBoxx Sterling Non Gilts AAA is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 3%. Due to the fund's risk constraints, the intention is that the fund's performance profile will not deviate significantly from that of the Markit iBoxx Sterling Non Gilts AAA over the long term.

Please note: The fund's ability to buy and sell bonds and the associated costs can be affected during periods of market stress which could include periods where interest rates move sharply.

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost, and/or generate extra income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives can be used to generate growth, consistent with the fund's risk profile, if market prices are expected to rise ("long positions") or fall ("short positions"). These positions can be used in overseas markets.
- Derivatives include instruments used to manage expected changes in interest rates, inflation, currencies or credit worthiness of corporations or governments.

Performance Review

Over the period under review, the Fund returned 3.40% (Source: FactSet, Institutional Accumulation, net of fees). This compared to a return of 3.43% for our performance target. (Source: FactSet, the iBoxx Sterling Non Gilts AAA Index +0.65%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Any data contained herein which is attributed to a third party ("Third Party Data") is the property of (a) third party supplier(s) (the "Owner") and is licensed for use by abrdrn**. To the extent permitted by applicable law, none of the Owner, abrdrn** or any other third party (including any third party involved in providing and/or compiling Third Party Data) shall have any liability for Third Party Data or for any use made of Third Party Data. Neither the Owner nor any other third party sponsors, endorses or promotes the fund or product to which Third Party Data relates.

**abrdrn means the relevant member of abrdrn group, being abrdrn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

abrdn AAA Bond Fund

Continued

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The Fund's security selection and credit positioning both added to returns. By credit rating, AAA rated bonds contributed to performance, while the spilt rated AAA/AA rated bonds marginally detracted. At the sector level, collateralised bonds boosted returns, while consumer cyclical credit was negative. By issuer, British Land owned Broadgate complex, the Canadian Pension Plan (CPPIB) and Nationwide Building Society helped performance. Conversely, the Wellcome Trust, the Government of the UK, Microsoft and Temasek (the Singapore sovereign wealth fund) dragged marginally on returns.

Market Review

Corporate bonds performed well over the period, as central banks started to cut interest rates amid declining inflation.

Government and corporate bond prices largely rose in March, with riskier credit outperforming higher-rated issues. The second quarter was a volatile period for markets as government bond yields moved higher. Credit spreads were choppy but relatively unchanged by the quarter-end. Macroeconomic data finally started showing signs of a slowdown in the US with slightly softer labour markets. Inflation drifted lower year-on-year but ended the quarter roughly where it started the year at just above 3%. Meanwhile, the European Central Bank (ECB) cut interest rates by 0.25% in June, its first rate cut since 2019. The decision was supported by all but one of the ECB's governors, and President Christine Lagarde said the central bank had grown more confident about the inflation outlook.

The start of August was a mixed period for the market, as weak US non-farm payroll numbers coincided with a Japanese yen carry trade unwind after a hawkish rate hike from the Bank of Japan. This triggered a sharp sell-off in equity markets and a widening of credit spreads, which was reversed in subsequent weeks. The US Federal Reserve (Fed) reduced rates in September for the first time since early 2020, cutting interest rates by 50 basis points (bps). Recent employment data has shown some signs of weakness, as a revision revealed around 68,000 fewer jobs added in the 12 months to March 2024. However, GDP figures were revised upward to an annualised 3.0% in the second quarter. Elsewhere, the Bank of England cut the base rate by 25bps at the start of August. Official data indicated the UK economy had expanded in the second quarter of the year due to strong performance in the

services sector. Lastly, the ECB also cut rates in September by 25bps, as annual eurozone inflation declined to 2.2% in August.

Portfolio Activity and Review

Turnover during the period was relatively muted. We remain happy with our corporate and collateralised positioning and believe that it has more performance to give the portfolio. Activity was therefore based around new issuance in supranationals which was primarily focused in the 3-5 year part of the yield curve, and also closely monitoring the relative value of the these supranationals verse UK gilts. The latter saw us reduce exposure to the European Investment Bank (EIB), KfW (Germany's Development Bank) and the World Bank, where the spread over gilts no longer warranted us holding them, preferring to hold gilts until better opportunities arose. Finally, there was some turnover as the Fund took advantage of opportunities to adjust duration exposure to markets such as Australia and Europe where we believe the market had over reacted.

Portfolio Outlook and Strategy

Credit spreads, while tighter over the period, have seen some volatility which has been based around three factors. Firstly, the first alarming macro data out of the US for quite some time with a poor employment report, followed by significant downward revision to the previous year's data. Secondly, geopolitical tensions rose, although this was far from a big driver of credit spreads. Finally, with the Fed cutting rates and markets rushing to price in more versus a rate hike in Japan, led to a large rise in the Japanese yen, and subsequently, a flurry of selling to cover yen shorts. This is known as the yen "unwind trade", which impacted markets as investors fund in yen to buy foreign assets such as US dollar corporate bonds with higher yields. Therefore, they had to sell some bonds to unwind the trade, which in turn, sent reverberations through the market for a couple of weeks.

Meanwhile, earnings remained fairly solid overall, with some notable exceptions. Financials are performing well, particularly banks. However, more consumer focussed areas are now showing cracks, notably automotive names that have had a raft of profit warnings.

Putting all this together, though, the overall sentiment for the asset class remains positive. While we must watch the US macro data closely to see if there is enough evidence of a deeper slowdown, for now, investors remain for the most part, comfortable with the global economy. It should be noted that investment grade corporate bonds perform best when GDP growth is in the 1-2% range, which is

abrdn AAA Bond Fund

Continued

perhaps where we are heading. Sentiment is further buoyed by key central banks messaging that they now have moved from worrying about inflation to focussing on growth and employment, and as such, wish to cut rates over the next year. Furthermore, this comes as China is starting to bolster stimulus.

We expect credit spreads to perform reasonably well in this environment. However, we caution that spreads reflect a lot of this good news and certainly are pricing a "soft landing". Therefore, while we remain overweight credit risk within the portfolio by being underweight supranationals versus the index, it is far from fully risk-on. We also continue to look to play longer duration relative to the benchmark, although after the very strong run of late we have paired this back a little as we look for a short term rise in government bond yields.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk			Typically higher rewards, higher risk			
←						→
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- Credit Risk - The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- Interest Rate Risk - The fund invests in securities which can be subject to price fluctuation for a variety of reasons including changes in interest rates or inflation expectations.
- ABS/MBS Risk - Asset and mortgage backed securities are subject to prepayment and extension risk and additional liquidity and default risk compared to other credit securities.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks and may lead to substantial loss and increased volatility in adverse market conditions. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Group 2	0.5705	-	0.5705	0.5076

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Emerging Markets Income Equity Fund

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in emerging market equities (company shares).

Performance Target: To deliver a yield greater than that of the MSCI Emerging Markets Index over a rolling five year period (before charges) and achieve a return in excess of the MSCI Emerging Markets Index over a rolling five year period (before charges).

The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in equities and equity related securities of companies listed, incorporated or domiciled in emerging market countries, or companies that derive a significant proportion of their revenues or profits from emerging market operations or have a significant proportion of their assets there.
- Emerging markets include Asian, Eastern European, Middle Eastern, African or Latin American countries.
- The fund may also invest up to 10% in bonds (loans to companies).
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix at country, sector and stock level.
- Their primary focus is on stock selection using research techniques to select individual holdings. Given the fund's income objective, the management team place particular emphasis on understanding business fundamentals and dynamics and the impact this has on cash flow generation and the company's ability to allocate cash effectively.
- In seeking to achieve the Performance Target, the MSCI Emerging Markets Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index

is not ordinarily expected to exceed 9%. Due to the income nature of the management process, the fund's performance profile may deviate significantly from that of the MSCI Emerging Markets Index.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund rose by 3.12% (Source: Morningstar Direct, Institutional Accumulation shares, net of fees). This compared to an increase of 5.82% in the MSCI Emerging Markets Index (Source: FactSet). Meanwhile, the Institutional Income's yield was 3.49% over the period, versus a yield target of 2.71% (the MSCI Emerging Markets Index).

Fund data source: Morningstar; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

sponsors, endorses or promotes the fund or product to which Third Party Data relates.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The overall exposure to China, including Hong Kong, held back relative returns. Video game developer NetEase, a dividend growth stock, reported disappointing second-quarter results on the back of lower-than-expected deferred game revenue. Some of our consumer-related holdings also underperformed, including brewer Budweiser APAC, another dividend growth name, and gaming operator Sands China. There were bright spots, however. The top single stock contributor over the period was high dividend payer SITC International. The shipping company rallied as freight rates moved higher.

In Mexico, lender Banorte, a high dividend name, detracted after the general election saw the ruling left-wing Morena party take greater control of Congress, which the market viewed negatively due to the greater risk of legislative changes.

On the flip side, stock picks in Taiwan proved positive, with dividend growth names Taiwan Semiconductor Manufacturing Co (TSMC) and Chroma ATE adding to relative gains. TSMC shares rose on optimism that artificial intelligence (AI)-driven demand would boost revenue growth. Chroma ATE, an electronic test equipment maker, benefitted from higher expectations for future semiconductor chip testing requirements.

In South Korea, integrated semiconductor chip maker Samsung Electronics, a dividend growth stock, derated following a labour union's announcement to carry out strike action amid unresolved wage negotiations. However, the losses were outweighed by positive contributions from Shinhan Financial Group and HD Korea Shipbuilding & Offshore Engineering. High dividend company Shinhan Financial Group fared well as the company has been improving its capital allocation structure under the country's Value-up programme, resulting in higher payout of earnings to shareholders through dividends and stronger anticipated returns. HD Korea Shipbuilding & Offshore Engineering's order book continued to rise with strong vessel pricing, giving better visibility on the upcoming profit cycle. Encouragingly, the company has publicly committed to reinstating its dividend payment.

The position in Kazakh superapp Kaspi.kz added further value. The high dividend stock has seen increased interest following its secondary listing on the Nasdaq earlier in the year.

Market Review

Emerging market equities rose over the volatile six months under review. US interest rate expectations and polls across large emerging economies drove investor sentiment, alongside a global AI-led tech rally. Markets were particularly turbulent towards the end of the period, driven by US recession fears and the unwinding of the yen carry trade following an unexpected rate hike by Japan's central bank.

In emerging Asia, Chinese stocks underperformed amid ongoing growth concerns and trade tensions with the US, even as policymakers intervened to support the economy and the equity market. On the other hand, Indian equities made notable gains following the election results as cabinet appointments for Prime Minister Narendra Modi's new coalition government pointed to political continuity. Technology-heavy markets in South Korea and Taiwan posted diverging fortunes, as the tech rally paused towards the period-end.

Elsewhere in Latin America, the leftwing ruling party's landslide election victory in Mexico sparked concerns over fiscal policy and constitutional change. Brazilian equities slumped on fears over the country's public finances. Separately, Gulf bourses trailed, weighed down by choppy oil prices and regional geopolitical tensions.

Portfolio Activity and Review

In key portfolio activity, we initiated three positions in China. We increased our exposure to Chinese discretionary spending with the purchase of dividend growth name Aier Eye Hospital, where growth is backed by the company's strong market position and an ageing population. Contemporary Amperex Technology, another dividend growth company, is a producer of batteries for electric vehicles and energy storage solutions that is coming out of a deep industry downturn. The firm is in a strengthened competitive position with robust cash flow generation. We also bought multinational commerce group PDD Holdings, in view of its sound execution and higher profitability.

In Taiwan, we broadened our tech exposure with the introduction of Sinbon Electronics, a play on global digitalisation. The high dividend payer has an attractive growth and returns profile, and a compelling yield. Moreover, we added dividend growth stock Yageo. The electronic components manufacturer's earnings are aligned to a shift towards high-powered computing and greater power demand.

abrdrn Emerging Markets Income Equity Fund

Continued

Turning to South Korea, we introduced dividend growth companies Samsung C&T and SK Hynix. Semiconductor component manufacturer SK Hynix has a higher customisation level versus peers, which could ease earnings cyclicality. Holding company Samsung C&T is attractively discounted to its constituents. In our view, South Korea's Value-up programme could drive a reduction in the holding company discount with improved shareholder returns and capital allocation. We also bought high dividend payer KEPCO Plant Service & Engineering to diversify our energy exposure into nuclear power and in view of the company's potential dividend growth over the medium term.

In India, we initiated a position in dividend growth name, vehicle and farming equipment maker Mahindra & Mahindra, given its capital management and high market share in growth segments of the market.

Elsewhere in Brazil, we added two dividend growth names. Industrial components manufacturer WEG is a beneficiary of rising electrification demand. Sabesp is a water utility, where we view the privatisation of the company as an opportunity for efficiency gains to drive higher returns.

Furthermore, we bought two high dividend stocks in the Middle East. Abu Dhabi-based property developer Aldar Properties has favourable exposure to the government's immigration, tourism and industrialisation policy, as well as a strong balance sheet and order backlog with improving rental yields. Saudi National Bank is a structural play on Saudi Arabia's economic industrialisation programme.

Against this, we sold Bank Negara Indonesia, Country Garden Services, Inner Mongolia Yili Industrial Group, LG Chem, Malaysia Airports and Rede D'Or Sao Luiz.

Portfolio Outlook and Strategy

The outlook for emerging markets remains constructive. The US Federal Reserve has begun to cut rates, and we would expect many emerging market central banks to follow suit in light of the ongoing disinflation trends seen across various countries. This, alongside structural tailwinds around the technology cycle, green transition and nearshoring, will provide support for emerging market countries and companies.

China's recovery remains uneven, with continued weakness in the property market despite incremental stimulus. However, recent corporate results have underscored the strength of some business franchises, while share buybacks, especially in the private sector, have been an encouraging indicator of corporate health. Meanwhile, India's long-term prospects are still bright – it remains one of the world's fastest-growing major

economies, backed by a significant transformation in physical and digital infrastructure, a resilient macro backdrop and positive demographics.

Broadly, emerging market valuations remain undemanding, both relative to history and versus the US.

We expect the fund's balanced exposure to high dividend and dividend growth businesses to support performance both in periods of market dislocation and greater optimism. The portfolio remains focused on firms with sustainable free cash flow generation, pricing power and comfortably manageable debt levels.

Our companies are, on the whole, delivering results, which we believe will be rewarded by the market. We continue to have conviction in our holdings and their ability to navigate the various crosswinds buffeting markets.

Furthermore, we are continuing to identify companies with attractive valuations, where we hold strong fundamental insights regarding their future income potential. Over the medium and longer term, we believe the microeconomic developments captured by our stock-specific insights are sufficiently material to have a profoundly positive impact on the portfolio.

Global Emerging Markets Equity Team

abrdn Emerging Markets Income Equity Fund

Continued

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 6 because of the extent to which the following risk factors apply:

- **Equity Risk** – The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- **Emerging Markets Risk** – The fund may invest in emerging markets, where political, economic, legal and regulatory systems are less developed. As a result, investing in emerging markets may involve higher volatility and a greater risk of loss than investing in developed markets. In particular, where the fund invests in Variable Interest Entity (VIE) structures to gain exposure to industries with foreign ownership restrictions or invests in Chinese assets via Stock Connect/Bond Connect, there are additional operational risks, which are outlined in the prospectus.
- **Derivatives Risk** – The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Closing net asset value per share (pence)	80.86	79.92	77.52	80.77
Change in net asset value per share	1.18%	3.10%	(4.02%)	(9.66%)
Operating charges	0.04%	0.04%	0.04%	0.04%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Europe ex UK Income Equity Fund

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in European equities (company shares).

Performance Target: To deliver a yield greater than that of the FTSE World Europe ex UK Index over a rolling five year period (before charges) and achieve a return in excess of the FTSE World Europe ex UK Index over a rolling five year period (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in equities and equity related securities of companies listed, incorporated, or domiciled in European countries, or companies that derive a significant proportion of their revenues or profits from European operations or have a significant proportion of their assets there.
- European countries include the emerging markets of Europe, but excludes the UK.
- The fund may also invest up to 15% in bonds (loans to companies).
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix at country, sector and stock level.
- Their primary focus is on stock selection using research techniques to select individual holdings. Given the fund's income objective, the management team place particular emphasis on understanding business fundamentals and dynamics and the impact this has on cash flow generation and the company's ability to allocate cash effectively.
- In seeking to achieve the Performance Target, the FTSE World Europe ex UK Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index

is not ordinarily expected to exceed 9%. Due to the income nature of the management process, the fund's performance profile may deviate significantly from that of the FTSE World Europe ex UK Index.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund returned 5.47% (Source: FactSet, Institutional Accumulation, net of fees). This compared to a return of 5.65% for our performance comparator (Source: FactSet, FTSE World Europe ex UK Index). From an income perspective, the Institutional share class yield stood at 3.37% at the interim period end versus the index yield target of 2.84%.

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The fund performed almost in line with the benchmark over the period. Our holdings in the financial sector were particularly strong with ING Groep the top individual contributor after the company reported a continued strong income outlook and high dividends. It was also among rate-sensitive banks, including Bank of Ireland, whose shares advanced as the market began to reappraise the view around the pace of interest-rate cuts. The prospect of strong results and an improved buy-back also helped to lift Intesa Sanpaolo's stock.

Meanwhile, Engie performed well thanks to good quarterly results and its shares recovered from volatility caused by the elections in France. In Spain, Inditex added to returns after a positive market reaction to the company's first-quarter trading statement and the fact that its defensive profile remains attractive in an uncertain environment. Deutsche Telekom benefited from continued robust corporate results in the US and Germany.

By contrast, shares in BE Semiconductor Industries fell due to concerns about cyclical weakness and fears that customers may delay their adoption of the hybrid bonding technology that is central to the company's long-term growth acceleration. However, the shares stabilised later in the period with more positive news on hybrid bonding, an upbeat investor day and higher margin targets. Universal Music Group (UMG) dropped back following results which showed revenue growth from subscriptions below expectations. UMG's growth potential remains attractive, though we will continue to monitor for further signs of slowing subscription growth. Edenred weighed on returns as the shares fell due to ongoing negative regulatory developments and the lack of a holding in Roche also detracted after the shares recovered from a recent period of weakness.

Market Review

Continental Europe's stock markets, as measured by the FTSE World Europe ex UK Index, performed well over the review period as inflation showed signs of stabilising and the European Central Bank (ECB) cut interest rates.

The period began well with sentiment boosted by signs of economic recovery in the eurozone and falling inflation, but stocks then lost some momentum due to signs that inflation was proving more persistent than expected and there was uneven economic newsflow across the region. Snap elections in France prompted sharp declines in local stock prices amid concerns that a victory for the far-right could lead to looser fiscal policies. However, shares across the region nudged upwards towards the end of the period despite a mixed bag of quarterly earnings, ongoing concerns about the global economy's health, and political developments in France.

In June, the ECB became the first of the three major Western central banks to pivot to a rate-cutting cycle as it made its first reduction since 2019. Euro-area GDP growth for the second quarter of 2024 came in at 0.6% year-on-year, although data confirmed that the German economy had contracted in the period. However, with inflation in the eurozone at its lowest level in more than three years there were growing hopes that the European Central Bank could cut interest rates for a second time.

Portfolio Activity and Review

We introduced four new holdings to the portfolio in the period, including in French cosmetics giant L'Oreal where we see dividend growth potential from the firm's leading position in cosmetics and beauty products. Secondly, we established a holding in Smurfit Kappa, now Smurfit Westrock, which has the potential to benefit significantly from the merger with WestRock over time, and also boasts an attractive dividend yield. We purchased a holding in Coca-Cola EuroPacific Partners as it offers strong dividend growth potential and access to some of the top beverage brands in the world at an appealing valuation. These purchases were funded by exiting the holdings in Swiss packaging company SIG Group and Scandinavian insurer Tryg.

Finally, we added a new position in Telenor, a Norway-based telecoms business that we believe is capable of sustaining an attractive dividend yield given its strong market positions and laser-focus on shareholder returns. In particular, the firm is realising considerable value from its Asian operations.

We exited the fund's holding in KPN due to our preference for Telenor, and also sold our holdings in both Nestle and Neste.

Portfolio Outlook and Strategy

We remain cautiously optimistic given robust corporate performance, attractive valuations and the beginning of the interest-rate cutting cycle. That said, political developments, as we have seen in France, have the ability to create short-term noise, while geopolitical risk remains elevated and the trajectory of growth remains relatively low.

The portfolio is packed with high quality, predominantly global businesses that are capable of delivering appealing long-term earnings and dividend growth at a modest aggregate valuation. Our focus on quality companies should provide protection even through a downturn: those companies with pricing power, high margins and strong balance sheets are better placed to navigate a lower-growth economic environment and emerge in a strong position. Furthermore, such quality characteristics are helpful in underpinning the portfolio's income generation. We think income will represent a greater share of equity returns going forward, and believe that our approach should offer an attractive combination of upside capture and downside protection.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Europe ex UK Smaller Companies Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth over the long term (5 years or more) by investing in European smaller capitalisation equities (company shares).

Performance Target: To achieve the return of the MSCI Europe ex UK Small Cap Index, plus 3% per annum over rolling five year periods (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in equities and equity related securities of small-capitalisation companies listed, incorporated or domiciled in European countries, or companies that derive a significant proportion of their revenues or profits from European operations or have a significant proportion of their assets there.
- European countries includes the emerging markets of Europe, but excludes the UK.
- Smaller capitalisation companies are defined as any stock included in the MSCI Europe ex UK Small Cap Index or, if not included within the index any stock having a market capitalisation smaller than that of the stock with the largest market capitalisation in such index.
- The fund may also invest in mid and larger capitalisation companies listed, incorporated or domiciled in European countries.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix at country, sector and stock level.
- Their primary focus is on stock selection using the management team's quality, growth and momentum approach. It aims to identify companies that exhibit a range of high quality characteristics, operate in growing markets and display positive business momentum.
- In seeking to achieve the Performance Target, the MSCI Europe ex UK Small Cap Index is used as a reference point for portfolio construction and as a basis for setting

risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 9%. Due to the active nature of the investment process, the fund's performance profile may deviate significantly from that of the MSCI Europe ex UK Small Cap Index.

Please note: The fund's ability to buy and sell small and mid-capitalisation shares and the associated costs can be affected during periods of market stress. In certain circumstances investors in the fund may not be able to sell their investment when they want to.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund returned 2.02% (Source: FactSet, Institutional Accumulation, net of fees). This compared with a return of 8.07% for our performance target (Source: FactSet, MSCI Europe ex UK Small Cap Index+3%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Continued

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The fund underperformed the comparator benchmark over the period. The main detractors included Italian luxury brand Brunello Cucinelli whose shares were affected by weak sentiment towards luxury stocks mainly relating to a weaker consumer outlook and negative news flow about a slowdown in Chinese demand. However, Brunello continued to deliver solid growth and retained its positive outlook on the market. France-listed perfume company, Interparfums, was also among the main laggards after a strong run last month. The business announced the renewal of a brand license from Van Cleef and Arpels, which was well received by the market. It also provided reassurance around the Mount Blanc license, which is also owned by Richemont. Elsewhere, shares in Italy-listed asset manager Azimut suffered following the announcement of a new online bank launch and a partial demerger. We retain the holding pending further analysis.

Switzerland-listed wire process automation business Komax dropped back on concerns over the potential disruptive impact of Chinese electric passenger vehicle imports on one of its key customer bases. We decided to trim our holding.

On the plus side, Swedish industrial compounder Addtech continued to perform well, emerging as the top contributor, after it announced a solid set of results that highlighted continued robust margin performance and indicated the strength of the decentralised operating structure. Our overweight to the weak German market was more than offset by good stock selection. There were notable contributions from some of our holdings, including kitchen appliance manufacturer Rational which benefited from better-than-expected results that highlighted continued solid demand for the company's products. Online ticketing business, CTS Eventim also announced solid figures that confirmed continued strong growth in ticketing for live events. We see further benefits to come from the structural move from offline to mobile ticketing and the potential for further geographic expansion. Italian banking platform, Fineco performed well following a solid monthly flow update. In our view, the market has overestimated the impact of BTP issuance on the business with deposit outflows being compensated by inflows in assets under management.

Market Review

Continental Europe's stock markets, as measured by the FTSE World Europe ex UK Index, rose over the review period as inflation showed signs of stabilizing. The European Central Bank (ECB) became the first of the three major Western central banks to pivot to a rate-cutting cycle with its first reduction since 2019.

The period began well with sentiment boosted by signs of economic recovery in the eurozone and falling inflation, but stocks then lost some momentum due to signs that inflation was proving more persistent than expected and there was uneven economic newsflow across the region. Snap elections in France prompted sharp declines in local stock prices amid concerns that a victory for the far-right could lead to looser fiscal policies. However, shares across the region nudged upwards towards the end of the period despite a mixed bag of quarterly earnings, ongoing concerns about the global economy's health, and political developments in France.

Euro-area GDP growth for the second quarter of 2024 came in at 0.6% year-on-year, although data confirmed that the German economy had contracted in the period. However, with inflation in the eurozone at its lowest level in more than three years there were growing hopes that the European Central Bank could cut interest rates for a second time.

Portfolio Activity and Review

We started a couple of new positions in the period. Irish housebuilder Cairn Homes has strong growth potential given the high level of expansion of the Irish economy and strong demand for housing in and around the Dublin area. French contract logistics business ID logistics was a further addition to the portfolio. It is a founder-managed company with an excellent long-term track record of growth in outsourced logistics for a large number of customers. The business is expanding geographically and has the opportunity for strong growth in the North American market.

On the other hand, we exited our positions in Stabilus, Irish Continental Group and Sixt.

Portfolio Outlook and Strategy

The outlook for European equities is particularly positive, especially for our quality, growth and momentum approach. Europe benefits from attractive valuations, most acutely relative to the US, and low levels of exposure among global investors. With the ECB now confirmed to be the first major central bank to relax monetary policy, interest-rate differentials are widening, and European growth is improving while the global economy cools: a stable economic backdrop alongside lower discount rates is a favourable combination for high-quality companies based in Europe, following several years of style headwinds.

Dispersion is rising across markets and within sectors, therefore a selective approach at the company level is increasingly important, and earnings delivery is key. Meanwhile, volatility is set to remain a feature of markets given elevated geopolitical risk and data-dependent central banks, and this is likely to provide opportunities for active investors. If inflation proves to be more persistent, then companies with true pricing power will be best placed to deliver sustained margin expansion. Sustainability is also coming back into focus as one of the most compelling enablers of long-term growth for economies and companies. We strongly favour the small-cap asset class, which has been shown to outperform in periods of market recovery.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 6 because of the extent to which the following risk factors apply:

- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The shares of small and mid-cap companies may be less liquid and more volatile than those of larger companies.
- Derivatives Risk – The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Group 1	0.7925	-	0.7925	0.6910
Group 2	0.0346	0.7579	0.7925	0.6910
ZC accumulation				
Group 1	2.0673	-	2.0673	1.8093
Group 2	0.4788	1.5885	2.0673	1.8093
Platform 1 accumulation				
Group 1	5.9151	-	5.9151	5.1024
Group 2	3.2135	2.7016	5.9151	5.1024

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Global Balanced Growth Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth over the long term (5 years or more) by investing in a diversified portfolio of assets.

Performance Target: To exceed the return of the following basket of assets per annum over rolling five year periods (after charges). This basket of assets represents the fund's long term strategic asset allocation. This basket is composed of global equities (70%) and global bonds (25%) and money markets (5%) ("basket of assets"). The underlying indices are the following: 20% FTSE All-Share Index, 26% S&P 500, 9% MSCI Europe ex UK, 8% MSCI Japan, 4% MSCI AC Asia Pacific Ex Japan, 3% MSCI Global Emerging Markets, 6% JP Morgan GBI Global Index, 4% FTSE Actuaries UK Conventional Gilts All Stocks, 6% Markit iBoxx Sterling Collateralized & Corporates Index, 5% Bloomberg Global High Yield Corporate Index 2% Issuer Cap, 4% JP Morgan EMBI Global Diversified Index, 5% SONIA.

The performance target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the performance target.

Performance Comparator: IA Mixed Investment 40%-85% Shares sector average.

The ACD believes this is an appropriate target/comparator for the fund based on the investment policy of the fund and the constituents of the indices/sector.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in global equities, corporate investment grade bonds and government bonds issued anywhere in the world (including in emerging markets) either directly or indirectly.
- The fund may hold other securities (e.g. investment trusts, sub-investment grade (high yield) bonds, supranational and other types of bonds, commodities and listed real estate) issued anywhere in the world (including in emerging markets) either directly or indirectly.
- The fund may invest up to 85% of its assets in global equities.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to select individual holdings depending on their growth prospects and/or creditworthiness relative to market expectations, given future economic and business conditions.
- Asset allocation is informed by reference to the basket of assets aligned to the fund's objective and considered representative of the expected risk profile of typical funds in the sector. In addition, short term proportions ("tactical asset allocations") in each asset class may be adjusted at any time relative to the basket of assets with the aim of improving returns.
- The fund will be subject to constraints which are intended to manage risk captured within the portfolio securities. The constraints may vary over time, and due to the active nature of the management process the fund's performance profile may deviate significantly from that of the average fund of the IA's Mixed Investment 40%-85% Shares sector average.

Derivatives and Techniques

- The fund will make routine use of derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express short term views reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Performance Review

Over the six-month period under review, the fund returned 3.84% (Source: Morningstar Direct, Institutional Accumulation shares, net of fees). This compared to a return of 6.25% for its benchmark (Source: Factset, XM Blend Benchmark) and 5.67% for its performance target (Source: Morningstar Direct, IA Mixed Investment 40-85% Shares Sector Average).

Fund data source: Morningstar Direct; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: Morningstar Direct. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

Equity portfolios

Within the equity portfolio, in the UK, the leading detractor was Indivior, which lagged after downgrading growth guidance for sales of its key opioid addiction medication Sublocade.

Not holding Rolls-Royce Holdings was also a negative as the previously very hard hit the shares rallied on strong civil and defence aerospace revenues driving profit upgrades, together with an improving credit profile and expectations of a return to paying a dividend.

Finally, not holding British American Tobacco also weighed on relative returns as the previously under pressure shares rebounded on signs of improving combustibles sales together with a shift by investors towards more defensive value opportunities.

Conversely, in the UK, the leading contributor was Hargreaves Lansdown, which rose on the announcement of a recommend takeover offer for the firm from a private equity consortium. Not owning Flutter Entertainment was also a positive as the company performed very strongly just prior to the start of the period, helped by strong gambling revenues and a listing of the stock in the United States. However, since then trading has been in line but it has given back some of that prior strength. Finally, now owning Reckitt Benckiser at the start of the year was a strong positive for the fund. The stock lagged on weaker trading together with litigation risks and a negative accounting adjustment.

Moving on to the US, the main detractor was Lululemon, which underperformed (after a strong run towards the end of the previous year) following disappointing revenue growth guidance for the current financial year, prompted by a weaker consumer environment in the US. Investors subsequently became increasingly concerned that the company's competitive positioning is deteriorating, and that the athleisure segment of the clothing market has become overly penetrated during the COVID pandemic. As further data became available around these trends, we made the decision to exit the position. Our underweight position in NVIDIA also detracted from performance, as demand for artificial intelligence (AI) processing power continued to surprise on the upside during this period, despite risks that some customers may be over-ordering because of the current short supply of chips. We are positive on the long-term prospects for AI, but are wary of the risks that may arise from such over-ordering behaviour. Lastly, Nice Ltd was negative as investor concern over the medium term impact of AI on the company's call center software business was heightened by the announcement of the CEO's retirement at the end of this year. We believe that the company is well positioned to take advantage of AI technology in bolstering its AI offerings, which are seeing increased customer interest in recent orders.

On the other hand, in the US, Resmed contributed positively as investors became less concerned about the impact of GLP-1 obesity drugs on the market for treating sleep apnea, helped by initial signs that GLP-1 prescriptions are helping to increase the rate of sleep apnea diagnosis. Within the medical equipment sector, Boston Scientific also helped relative performance as strong sales of their new electrophysiology products for treating atrial fibrillation helped drive an increase in revenue guidance for the year. Lastly, Goldman Sachs was also a positive contributor as the signs that interest rate increases were complete gave investors more confidence in the outlook for the investment banking market.

In Europe, the main detractor was Ubisoft, which continued to underperform for several reasons, including project cancellations, weaker consumer spending, changing market dynamics within gaming and disappointing financial performance of recent Ubisoft releases. In addition, we believe that poor execution by management and related party transitions between Tencent and Guillemot Brothers Limited caused further downwards pressure on Ubisoft's share price. As a result of these factors, we made the decision to exit the position. Pernod Ricard also detracted from relative returns. The share price has declined due weaker consumer sentiment in China and the US, as well as the near-term threat of tariffs in China. Weakness in the US has been compounded by destocking issues as retailers struggled to realign

abrdn Global Balanced Growth Fund

Continued

inventories with demand following an unexpectedly strong covid consumption boom, as well as a desire to hold lower amounts of stock in a higher interest rate environment. Nevertheless, we continue to see Pernod Ricard as a high-quality consumer company with world leading brands within spirits which should be nearing the end of its cyclical woes, making the valuation look attractive. Edenred also detracted following an investigation by Italian authorities into alleged irregularities in a public tender bidding process. We have however discussed this issue with the company and have gained comfort that this issue was confined to the south of Italy, and that the financial impact should be very limited. We are also more positive about the mid-term regulatory changes in some of their key markets than what is being reflected in consensus.

In contrast, the leading contributor was Adyen, which has performed well over the past year following strong results which have shown a meaningful improvement in customer take rates and growth in revenue beating market expectations. Longer term, there is continued enthusiasm about Adyen's prospects to grow and take market share in payment processing. In addition, Schibsted contributed to relative returns. The company has performed well due to the partial sale of Adevinta at the end of 2023. This resulted in a large dividend paid to shareholders, amounting to around 20% of market capitalisation. Lastly, Novo Nordisk enjoyed strong performance driven by continued excitement over the potential size of the obesity market, of which Novo Nordisk's weight loss drug Wegovy is a market leader. Management also has a handful of exciting obesity drugs in its pipeline, which should allow the company to maintain a leading market position. In addition, Novo Nordisk's financial results have continued to beat expectations, with continued sales and profit growth.

Government bond portfolio

The fund started the period viewing duration from a tactical standpoint, we felt duration should remain relatively rangebound. As global yields started to rise in late March the fund began to establish a more structural long duration position. The timing proved to be too soon, as global yields moved aggressively higher as US inflation surprised to the upside in April. Duration was therefore a drag on performance in April. We felt yields had moved too far in April, as although the data was better than the market expected we saw this improvement of data as temporary. We were therefore happy to maintain the long duration positioning throughout the summer months. As yields moved lower at the end of July on the surprise downturn in US labour market data, the fund started to reduce its position.

Portfolio Activity and Review

Equity portfolios

In the UK, the portfolio activity key changes included introducing new positions in National Grid, which we had previously exited as we responded to share price weakness and a £7 billion rights issue to reintroduce the position given the improved valuation and a balance-sheet that is better placed to support investment in the UK energy transition. We also bought catering outsourcer specialist Compass Group after the analyst initiated with a buy recommendation. The company brings the characteristics of defensive growth at high returns and improves the risk profile of the fund. Finally, we also introduced Reckitt Benckiser as we believe the owner of strong consumer brands trades on a depressed valuation after a series of operational and legal mishaps left its share price in an attractive territory.

Funding for these transactions came from a mix of sales including the sale of Hargreaves Lansdowne, which we exited following an attractive merger and acquisition takeover offer. We also sold SEGRO due to concerns over slowing rental growth momentum and recycled into stronger ideas in the sector including new positions in Safestore and Unite Group. Lastly, we exited Vodafone due to concerns over its ability to execute a successful turnaround in its German operations.

Turning to the US, the fund bought NVIDIA given the company's dominant market position in a data-centre upgrade cycle. The fund also initiated Linde as we are positive about the company's potential for growth given its project backlog and strong track record of execution. Lastly, we introduced Advanced Drainage Systems towards the end of the period, after the company announced strong results and upgraded guidance for 2024. Management pointed to better pricing and margins, aided by robust infrastructure spending, which helped offset weakness in residential and commercial construction.

Conversely, the fund sold Air Products and Chemicals as we are concerned regarding ongoing execution risks at their large projects. We offloaded CVS as we saw further risk to the outlook for both retail pharmacy profitability and the company's health insurance margins, and also sold out of Lululemon, as we became increasingly concerned that the athleisure apparel market may slow for an extended period of time.

abrdn Global Balanced Growth Fund

Continued

In Europe, we introduced Hermes, a business we have followed for many years and where new work from our consumer sector analyst showed the notable strength of their pricing power and potential for further growth. We also continued to build our position following the initiation. In addition, we bought DSM-Firmenich, a global leader in the ingredients industry, which is on an improving quality trajectory following the acquisition of Firmenich, one of the world's best fine fragrance franchises. Finally, we introduced BE Semiconductor Industries, a key supplier to the semiconductor industry. We are excited about the potential for significantly higher demand for their new generation of machines than is currently expected by the market, due to the adoption of hybrid bonding technology in semiconductor manufacturing.

In contrast, we exited French computer games designer Ubisoft, which has been a longstanding holding but has experienced a series of significant governance and execution challenges. These developments have led to the quality deteriorating below the level we expect for positions in the portfolio. We also exited Prosus since the investment case had run its course and had become a lower conviction position within the portfolio.

Government bond portfolio

Notable positions came from our cross-market views, while the fund added long Germany versus US early on in the period. The better-than-expected US data in the first quarter was a US-specific story. As US yields surged higher in April leaving European yields behind, the fund took profits. As already stated, we felt that the better-than-expected US data was a temporary driver. The US growth exceptionalism story was over-played from our perspective. A further cross-market story in the second quarter was the political uncertainty in France. On the announcement of a French election, the fund sold France versus Germany. As the election approached, and the yield spread widened, the fund took profits.

In curve strategies, the fund held a UK front-end steepener throughout the period which worked well. The fund also held a US front-end steepener versus an Australian front end flattener, as we felt that the two respective central banks were on very different monetary policy courses. As the US curve steepened in June and July, the fund closed the US leg. Finally, in curve strategies, the fund held a UK long-end flattener versus a US steepener, as we felt the UK curve continues to be too steep versus its peers.

Portfolio Outlook and Strategy

Global markets are currently navigating a complex landscape. Macroeconomic factors remain as unpredictable as ever, with investors scrutinising the latest data. Meanwhile, in September, the US Federal Reserve delivered a large 50 basis point (bp) rate cut and signalled more cuts ahead. Geopolitical pressures remain elevated throughout the world, and with the early start to presidential proceedings in the US, this is likely to remain the case. Recessionary concerns appear to have abated given economic data has so far been more positive than many expected. However, one or two weak data points could alter that picture very quickly. Our focus remains at the stock level, ensuring the portfolio is well diversified on both a regional and sectoral basis, and robust enough to preserve capital in periods of market weakness.

As we approach the final quarter of 2024, we still believe we are nearing the end of the economic cycle, reinforced by incoming data across developed-market economies showing a softening in activity, a loosening in labour markets, and a decline in inflation measures. Therefore, we see medium-term value in owning global government bonds, anticipating an interest rate-cutting cycle. The decline in yields should be accompanied by a steepening of yield curves. The UK election victory for the Labour Party, coupled with the BoE's desire to cut rates, should result in Gilts performing well compared to their peers. Currently, the BoE is expected to continue its easing cycle in the final months of 2024, with at least one more 25 bp rate cut anticipated. Despite the generally positive outlook, we remain ready to adjust the portfolio to navigate potential volatility.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- **Equity Risk** – The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- **Emerging Markets Risk** – The fund may invest in emerging markets, where political, economic, legal and regulatory systems are less developed. As a result, investing in emerging markets may involve higher volatility and a greater risk of loss than investing in developed markets. In particular, where the fund invests in Variable Interest Entity (VIE) structures to gain exposure to industries with foreign ownership restrictions or invests in Chinese assets via Stock Connect/Bond Connect, there are additional operational risks, which are outlined in the prospectus.
- **Credit Risk** – The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- **Interest Rate Risk** – The fund invests in securities which can be subject to price fluctuation for a variety of reasons including changes in interest rates or inflation expectations.
- **High Yield Credit Risk** – The fund invests in high yield bonds which typically carry a greater risk of default than those with lower yields.
- **Derivatives Risk** – The use of derivatives may involve additional liquidity, credit and counterparty risks and may lead to substantial loss and increased volatility in adverse market conditions. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

[^] In July 2020, the Investment Association issued Guidance on Disclosure of Fund Charges and Costs effective from 30 June 2022 which updated the Ongoing Charges disclosure requirements to include indirect costs associated with funds' holdings of closed-ended investment funds. This resulted in an increase of 0.07% in the Ongoing Charges figures disclosed as at 28 February 2023.

* In December 2023, the Investment Association issued Guidance on Disclosure of Fund Charges and Costs effective from 30 November 2023 which updated the Ongoing Charges disclosure requirements to exclude indirect costs associated with funds' holdings of closed-ended investment funds.

Group 1	1.2308	-	1.2308	1.5465
Group 2	0.9272	0.3036	1.2308	1.5465

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Global Focused Equity Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth over the long term (5 years or more) by investing in global equities (company shares).

Performance Target: To achieve the return of the MSCI AC World Index plus 3% per annum over rolling five year periods (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

Performance Comparator: The IA's Global Equity sector.

The ACD believes this is an appropriate target/comparator for the fund based on the investment policy of the fund and the constituents of the index/sector.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in equities and equity related securities of companies listed on global stock exchanges.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a concentrated asset mix at country, sector and stock level.
- The fund looks to deliver a concentrated portfolio of the highest conviction investment ideas of the management team in companies of all sizes.
- In seeking to achieve the Performance Target, the MSCI AC World Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 10%. Due to the active nature of the management process, the fund's performance profile may deviate significantly from that of the MSCI AC World Index.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund returned 8.37% (Source: Morningstar Direct, Institutional Accumulation, net of fees). This compared to a return of 8.06% for our performance target (Source: FactSet, MSCI AC World Net Total Return Index +3%).

Fund data source: Morningstar; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Source: MSCI. The MSCI information may only be used for your internal use, may not be reproduced or disseminated in any form and may not be used as a basis for or a component of any financial instruments or products or indices. None of the MSCI information is intended to constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such. Historical data and analysis should not be taken as an indication or guarantee of any future performance analysis forecast or prediction. The MSCI information is provided on an 'as is' basis and the user of this information assumes the entire risk of any use made of this information. MSCI, each of its affiliates and each other person involved in or related to compiling, computing or creating any MSCI information (collectively, the 'MSCI Parties') expressly disclaims all warranties (including without limitation, any warranties of originality, accuracy, completeness, timeliness, non-infringement, merchantability and fitness for a particular purpose) with respect to this information. Without limiting any of the foregoing, in no event shall any MSCI Party have any liability for any direct, indirect, special, incidental, punitive, consequential (including, without limitation, lost profits) or any other damages (www.msci.com).

Neither the Owner nor any other third party sponsors, endorses or promotes the fund or product to which Third Party Data relates.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

From a stock-specific perspective, AstraZeneca reported strong results, with both sales and core earnings per share surpassing consensus expectations. The company achieved notable beats across all key assets, while maintaining its full-year guidance. Our holding in Tencent outperformed. The internet company reported robust first-quarter results, with a turnaround in core gaming revenues and a surge in advertising revenues driven by more efficient monetisation of its video accounts business. Elsewhere, Boston Scientific performed well,

abrdn Global Focused Equity Fund

Continued

as its first-quarter results surpassed expectations and it raised its 2024 adjusted earnings per share guidance. The company now expects robust organic growth of 10–12% for the year, an increase from the previously forecasted 8–9%. German online ticketing business CTS Eventim performed well. It issued a strong set of final results that were ahead of expectations and confirmed that the live events market remained strong.

By contrast, the portfolio had no exposure to NVIDIA, whose recent results moderately exceeded guidance. The company's comments about a strong demand environment, coupled with supply constraints for both existing and new products, drove the shares higher. Diageo weighed on returns due to continued weakness in the US spirits market. This resulted in prolonged destocking and increased promotional activity, factors that weighed on performance. A lack of exposure to Apple was detrimental. The shares recovered after a weaker run earlier in the year, as low expectations for iPhone sales moderately improved, along with more enthusiasm for any potential artificial intelligence-related product strategy Apple may pursue. Mercedes-Benz Group, the German car manufacturer, saw its share price negatively affected by execution issues in the first quarter of 2024, which arose from a combination of supply-chain bottlenecks and higher-end model changeovers, as well as continuous concerns about a deterioration in consumer confidence that could lead to negative revisions in sales.

Market Review

Global stock markets rose in sterling terms over the six-month period. This was as the prospect of an end to monetary tightening and potential rate cuts in the months ahead reassured investors, despite episodes of volatility linked to concerns about continued inflation and the risk of a US recession.

After central banks in Western economies raised interest rates faster and further than previously anticipated to counter multi-decade-high inflation, inflationary pressures eased in many countries over the course of the period. However, while global economic growth held up better than investors expected, fears of a US recession triggered by higher rates became more heightened towards the end of the period.

Equities performed well in March, supported by strong economic data. However, they weakened in April as fears resurfaced that interest rates might remain higher for longer due to stubborn inflation. Equities then performed better from May onwards, supported by renewed hopes of future rate cuts and robust corporate earnings. Although equities sold off from mid-July to early August due to fears of a US recession, they soon recovered on the back of reassuring economic data.

Portfolio Activity and Review

There were no initiations or outright disposals over the period.

Portfolio Outlook and Strategy

Macroeconomic factors remain as unpredictable as ever. A weak employment report in the US in early August reminded us of the volatility and directional change that equity markets are capable of. It is highly likely that we will see the US Federal Reserve finally make a move on rates over the coming weeks. However, there is still scope for disappointment regarding the pace and quantum of the cuts, particularly as geopolitical pressures remain elevated throughout the world and have the potential to affect investor risk appetite and the deflationary environment considerably and suddenly. While a soft landing is the consensus base case, some market participants have increased the probability of a recession in the US after the weak employment report in early August. Our focus remains at the stock level, ensuring the portfolio is well diversified on both a regional and sectoral basis, and robust enough to preserve capital in periods of market weakness.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 6 because of the extent to which the following risk factors apply:

- **Equity Risk** – The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- **Concentration Risk** – A concentrated portfolio (whether by number of holdings, geographic location or sector) may be more volatile and less liquid than a diversified one.
- **Emerging Markets Risk** – The fund may invest in emerging markets, where political, economic, legal and regulatory systems are less developed. As a result, investing in emerging markets may involve higher volatility and a greater risk of loss than investing in developed markets. In particular, where the fund invests in Variable Interest Entity (VIE) structures to gain exposure to industries with foreign ownership restrictions or invests in Chinese assets via Stock Connect/Bond Connect, there are additional operational risks, which are outlined in the prospectus.
- **Derivatives Risk** – The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

abrdn Global Infrastructure Equity Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth and income over the long term (5 years or more) by investing in infrastructure related equities (company shares).

Performance Target: To achieve a return in excess of the S&P Global Infrastructure Net Total Return Index over a rolling five year period (after charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in equities and equity related securities of companies listed on global stock exchanges in infrastructure related sectors or listed companies that have a significant proportion of infrastructure assets or derive a significant proportion of their revenues or profits from infrastructure assets.
- The fund may also invest in other funds (including those managed by abrdn), money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix of infrastructure assets at country, sector and stock level.
- Their primary focus is on stock selection using research techniques to select individual holdings. The research process is focused on finding high quality companies at attractive valuations that can be held for the long term.
- In seeking to achieve the Performance Target, the S&P Global Infrastructure Net Total Return Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 9%. Due to the active nature of the management process, the fund's performance profile may deviate significantly from that of the index.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").

- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

The fund returned 7.65% over the review period (source: FactSet, Institutional Accumulation shares, net of fees). This compares with a benchmark return of 12.33% (Source: FactSet, S&P Global Infrastructure Net Index).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Any data contained herein which is attributed to a third party ("Third Party Data") is the property of (a) third party supplier(s) (the "Owner") and is licensed for use by abrdn**. Third Party Data may not be copied or distributed. Third Party Data is provided "as is" and is not warranted to be accurate, complete or timely. To the extent permitted by applicable law, none of the Owner, abrdn** or any other third party (including any third party involved in providing and/or compiling Third Party Data) shall have any liability for Third Party Data or for any use made of Third Party Data. Neither the Owner nor any other third party sponsors, endorses or promotes the fund or product to which Third Party Data relates.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

In terms of individual stock detractors, CCR, the Brazilian toll-road operator, released decent quarterly results and held an analyst day outlining the company's capex and asset recycling plans for the coming years. However, the stock lagged the overall market after CCR announced that it had missed out on a bid for a toll road in Brazil. While this was disappointing news, it does highlight good capital discipline from the management team. Vinci, the French construction and concession company, reacted negatively to the announcement of a snap election in France due to fears that the potential winner could

abrdn Global Infrastructure Equity Fund

Continued

impose even more levies and restrictions on owners of infrastructure assets. There was also some rhetoric around the possibility of nationalising the toll-road network. While it does not look like either party will have sufficient power to enact the more negative outcomes, it is a reminder of the political risk inherent in infrastructure assets broadly. Altus Power, the US commercial and industrial rooftop solar developer, missed earnings expectations and guided down for the remainder of the year as delays in interconnections for finished projects have pushed revenue and earnings into 2025. Canadian Pacific Kansas City, the North American railroad operator, delivered a decent quarterly earnings update with results broadly in line, and the company reaffirmed its full-year guidance. However, the stock, along with most of its railroad peers, experienced a weak first half of the year due to continued macroeconomic concerns, heightened by negative data points from trucking companies reporting at the same time.

In contrast, Vistra Corporation, the US-based power producer, continued its strong momentum over the period. This was due to a combination of receiving regulatory approval for its Energy Harbor acquisition (with 4 gigawatts of carbon-free, nuclear generation) and higher power prices in Texas, driven by increased demand from data centres. Helios Towers, the Africa-focused tower operator, reacted positively to strong first-quarter results that beat expectations and laid the groundwork for earnings upgrades later in the year. International Container Terminal Services, the Philippine global port operator, outperformed as data points from some of its key ports, such as Melbourne, Manila and Mexico, showed continued market-share gains. Malaysia Airports Holdings, the Malaysian airport operator, had strong performance. This was due to the combination of some rumours of a potential takeover offer for the company and the announcement of a favourable outcome in its negotiations with the regulator on tariffs, as well as a future regulator structure that should improve earnings stability going forward.

Market Review

Global stock markets rose in sterling terms over the six-month period. This was as the prospect of an end to monetary tightening and potential rate cuts in the months ahead reassured investors, despite episodes of volatility linked to concerns about continued inflation and the risk of a US recession.

After central banks in Western economies raised interest rates faster and further than previously anticipated to counter multi-decade-high inflation, inflationary pressures eased in many countries over the course of the period.

However, while global economic growth held up better than investors expected, fears of a US recession triggered by higher rates became more heightened towards the end of the period.

Equities performed well in March, supported by strong economic data. However, they weakened in April as fears resurfaced that interest rates might remain higher for longer due to stubborn inflation. Equities then performed better from May onwards, supported by renewed hopes of future rate cuts and robust corporate earnings. Although equities sold off from mid-July to early August due to fears of a US recession, they soon recovered on the back of reassuring economic data.

Portfolio Activity and Review

We initiated a new position in Sacyr during the period. Sacyr is a Spanish-listed concession and construction company, with a business model similar to Vinci or Eiffage. It has a strong base of concession assets in Europe and Latin America, with the majority of them having some downside protection mechanisms built into their contracts. The company is now expanding operations into North America, where it successfully won a project, and has a robust pipeline of opportunities to help grow earnings. Sacyr is also looking to create an investment vehicle from its existing concessions, where it can sell down a partial stake to help fund future growth. Overall, we believe management can continue to create value through these new concessions and help compound value over time.

We also initiated a new position in PNM Resources during the period. PNM is a US electric utility that serves New Mexico (NM) and Texas (TX). It is a company we have been following since the start of the year and on which we have done extensive due diligence and peer review. The thesis revolves around an improving regulatory environment in NM and a continuation of strong load growth in TX. The building blocks are in place for NM to be viewed as a more constructive regulatory environment, with a completely new commission and a mandate to work closely with the utility to achieve NM's energy goals. Overall, the stock has been heavily penalised since an attempted takeover by Avangrid last year fell through, so we saw an opportunity to invest given our expectation of a stabilising regulatory environment.

We sold our position in Algonquin Power. Our investment thesis was that after the renewables sale, investors could focus on the US regulated utility, which would drive growth via rate-base investments going forward. We were as shocked as other investors when the company announced the level of regulatory lag, namely, investments that have been made but not yet captured in the rate base, which indicated poor internal controls and misguided incentives.

abrdn Global Infrastructure Equity Fund

Continued

In prior calls, management had not been forthcoming on this point; indeed, in our latest call with management after this announcement, we did not have confidence that the company had a full handle on all aspects of the regulated business.

We also sold our holding in Vistra Corporation during the period. The company is a merchant power generator in the US, primarily focused on the Texas and PJM markets. There has been a near tripling in the share price over the past 12 months, driven by increased tightness in the power markets and the company's status as an indirect play on the artificial intelligence (AI) data centre trade, due to the high level of power needed for these assets. Another factor in our sell decision was the stock's increasing volatility, as the marginal buyer/seller was playing the AI trends rather than the company's underlying fundamentals.

Portfolio Outlook and Strategy

Macroeconomic factors remain as unpredictable as ever. A weak employment report in the US in early August reminded us of the volatility and directional change that equity markets are capable of. It is highly likely that we will see the US Federal Reserve (Fed) finally make a move on rates over the coming weeks. However, there is still scope for disappointment regarding the pace and quantum of the cuts, particularly as geopolitical pressures remain elevated throughout the world and have the potential to affect investor risk appetite and the deflationary environment considerably and suddenly. While a soft landing is the consensus base case, some market participants have increased the probability of a recession in the US after the weak employment report in early August. Our focus remains at the stock level, ensuring the portfolio is well diversified on both a regional and sectoral basis, and robust enough to preserve capital in periods of market weakness.

With infrastructure recovering out of the summer doldrums, it continues to be seen as a relative safe haven as investors grapple with where the economy is heading from here and whether current AI-related valuations are appropriate. Investors' focus is firmly on what will be the cadence of interest-rate cuts from the Fed in the coming months (as a reminder, falling interest rates are generally a positive for long-duration assets like infrastructure) and also on the outcome of the upcoming US election. With all this focus on near-term trends, it is important not to lose sight of the long-term structural drivers that we see in infrastructure, namely the energy transition, digital acceleration, ageing infrastructure and increasing urbanisation.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024

The fund is rated as 5 because of the extent to which the following risk factors apply:

- **Equity Risk** – The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- **Concentration Risk** – A concentrated portfolio (whether by number of holdings, geographic location or sector) may be more volatile and less liquid than a diversified one.
- **Emerging Markets Risk** – The fund may invest in emerging markets, where political, economic, legal and regulatory systems are less developed. As a result, investing in emerging markets may involve higher volatility and a greater risk of loss than investing in developed markets. In particular, where the fund invests in Variable Interest Entity (VIE) structures to gain exposure to industries with foreign ownership restrictions or invests in Chinese assets via Stock Connect/Bond Connect, there are additional operational risks, which are outlined in the prospectus.
- **Derivatives Risk** – The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.
The change in the net asset value per share is the change from the beginning of the period to the close of the period.
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Global Smaller Companies Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth over the long term (5 years or more) by investing in Global small-capitalisation equities (company shares).

Performance Target: To achieve the return of the MSCI AC World Small Cap Index, plus 3% per annum (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

Performance Comparator: IA Global Equity Sector Average.

The ACD believes this is an appropriate target/comparator for the fund based on the investment policy of the fund and the constituents of the index/sector.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in small-capitalisation equities and equity related securities of companies listed on global stock exchanges.
- Small capitalisation companies are defined as any stock included in the MSCI AC World Small Cap Index or, if not included within the index, any stock having a market capitalisation smaller than that of the stock with the largest market capitalisation in such index.
- The fund may also invest in mid and larger capitalisation companies listed on global stock exchanges.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix at country, sector and stock level.
- Their primary focus is on stock selection using the management team's quality, growth and momentum approach. It aims to identify companies that exhibit a range of high quality characteristics, operate in growing markets and display positive business momentum.
- In seeking to achieve the Performance Target, the MSCI AC World Small Cap Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 10%. Due to the active nature of the management process, the fund's performance profile may deviate significantly from that of the MSCI AC World Small Cap Index.

Please note: The fund's ability to buy and sell small and mid-capitalisation shares and the associated costs can be affected during periods of market stress. In certain circumstances investors in the fund may not be able to sell their investment when they want to.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund returned 1.93% (Source: FactSet, Institutional Accumulation, net of fees). This compared to a return of 4.59% for the benchmark (Source: FactSet, MSCI AC World Small Cap Index), while our performance target returned 6.05% (Source: FactSet, MSCI AC World Small Cap Index +3%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Third Party Data. Neither the Owner nor any other third-party sponsors, endorses or promotes the fund or product to which Third Party Data relates.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

In terms of individual stock detractors, Regional's shares sold off following Morena's landslide election victory in Mexico, amid rumours the ruling party might review the tax treatment of banks. Despite this political uncertainty, Regional continues to operate soundly. Similarly, Lattice Semiconductor Corporation's shares dropped after news broke that the CEO was leaving to join Coherent Corporation. Lattice has appointed an interim CEO while the board conducts a comprehensive search for a permanent replacement. Johns Lyng Group provides contractors for regular maintenance and repairs for damage caused by insured events like flooding or fire. Benign weather led to fewer incidents than usual, while two front-end business partners failed to meet performance standards. In the case of Advanced Drainage Systems, results were modestly below expectations, due to a shortfall in the company's agriculture end-market. However, management has maintained its full-year guidance.

On the positive side, ASICS Corporation reported quarterly numbers ahead of consensus expectations, with its pricing strategy and ongoing focus on driving returns in key product categories working well. The company also announced a share buyback programme, which was positively received by investors. Moreover, Addtech, the Swedish automation company, rose on the back of better-than-expected earnings. The small-cap asset class in Sweden has started to outperform since the Riksbank began cutting rates in May, supporting our favourable view of the asset class as we move to a lower-interest-rate environment. Axon Enterprise reported quarterly numbers ahead of consensus expectations, with balanced growth across both its software and hardware offerings, domestically and internationally. Management raised guidance, reflecting a solid outlook. Meanwhile, CTS Eventim shares jumped after management pre-announced fourth-quarter numbers and raised guidance, with both the ticketing and live entertainment segments showing solid traction. Management's proposal to pay a record dividend reflects its confidence in the business.

These individual stock movements occurred against a backdrop of broader global market trends.

Market Review

Global stock markets rose in sterling terms over the six-month period, largely driven by the prospect of an end to monetary tightening and potential rate cuts in the months ahead. This reassured investors despite episodes of volatility linked to concerns about persistent inflation and the risk of a US recession.

During this time, central banks in Western economies raised interest rates faster and further than previously anticipated in an effort to counter multi-decade-high inflation. As a result, inflationary pressures began to ease in many countries. However, while global economic growth held up better than expected, fears of a US recession, triggered by higher rates, intensified towards the end of the period.

On a month-by-month basis, equities performed well in March, buoyed by strong economic data. In contrast, April saw a weakening in equity markets as concerns resurfaced that interest rates might remain higher for longer due to stubborn inflation. By May, however, equities regained strength, supported by renewed hopes of future rate cuts and robust corporate earnings. Although equities sold off from mid-July to early August due to renewed recession fears in the US, they quickly recovered on the back of reassuring economic data.

Portfolio Activity and Review

We initiated positions in several companies over the period.

Cranswick is a major producer of pork and poultry products. It continues to execute extremely well on its strategy to deepen and broaden its market share across its core protein businesses through superior quality and service. Indeed, the company has seen better-than-expected growth on the back of new customer wins, expansion into new categories (for example, quick service restaurants), and the development of innovative products.

Casey's General Stores is one of the largest convenience store operators in the US. The company has proven execution in driving both organic and inorganic growth. For example, in-store initiatives – such as expanding its prepared food offering (the company is the fifth-largest pizza chain in the US) and ramping up private label sales – have worked well. Regarding mergers and acquisitions, management take a flexible approach to store additions (organic versus inorganic), depending on the best available opportunities. Margins are supported by increased scale, a shift in product mix, and the deployment of artificial intelligence/digital tools to reduce labour hours.

abrdn Global Smaller Companies Fund

Continued

Uno Minda is an automotive component manufacturer for the domestic Indian market and, increasingly, for export. The company has benefited from multiple top-line drivers, including favourable government initiatives to boost domestic production, growth in the two-wheel and four-wheel markets in India, increased content per vehicle, and the expansion of its product offering.

Japan Elevator Service Holdings offers stable and visible earnings growth due to its exposure to the elevator maintenance and modernisation market in Japan. The company is the largest independent elevator service company in Japan and is differentiated by its technical strength (including remote monitoring) and parts-supply capabilities. Maintenance contracts are required by law in Japan, and customers tend to be sticky. Japan Elevator Service Holdings has delivered higher-than-industry growth and gained market share as the penetration of outsourcing has increased. Consequently, the company has grown sales by a compound annual growth rate of 17% since its listing in 2017. Moreover, it generates positive free cash flow and has a net cash balance sheet.

SharkNinja is a highly innovative consumer goods brand listed in the US. Management's strategy is based on a high cadence of new product launches, expansion into additional categories, and breaking into new international markets (entering six in 2023) to support future growth. Indeed, the company has achieved a 20% compound annual growth rate over the last 16 years through its organic growth strategy. SharkNinja has a strong financial profile, with low leverage, positive free cash flow, and a gross margin and return on equity in the mid-40% and high-20% ranges, respectively.

Meanwhile, we disposed of our holdings in several companies over the period.

Pool Corporation's first-quarter results and guidance were not sufficiently strong to justify holding this company, which is now off-benchmark and has a negative matrix score (our in-house scoring system).

CVS Group was negatively affected by the worst-case outcome of the UK's Competition and Markets Authority's investigation into vet practises. It appears that the next stage of the investigation will take a minimum of 12 months to reach a recommendation.

Unlike other value retailers that have recently shown signs of improvement, Five Below's first-quarter results missed expectations, and its guidance was cut significantly. Management blamed the challenging macroeconomic environment. They said this disproportionately affected their lower-income consumers, who, due to higher food inflation and the increasing cost of necessities, are being more selective about their discretionary spending.

Traffic to stores was also down. These trends are at odds with Five's usual messaging of being recession-resilient, given its value-based proposition. This raised questions about Five Below's competitiveness compared to other retail formats.

Paylocity Holding Corporation missed consensus forecasts and tempered the outlook for investors. Management was unable to point to the exact cause of the slowdown in recurring revenues, citing the macroeconomic environment, market dynamics and Paylocity's own execution. Nevertheless, softer employment and elongated sales cycles weighed on revenue, while float income moderated.

Portfolio Outlook and Strategy

The second half of 2024 is a critical period for markets as investors weigh up slowing economic data, US presidential changes and potential currency-market moves.

In the short term, investors' attention has turned from second-quarter earnings results to the US Federal Reserve's pending rate decision. The exact size of the rate cut is open for debate. While US data shows that the economy is slowing, it remains unclear whether the central bank has successfully engineered a 'soft landing' or if the US might slip into recession.

Meanwhile, data from other regions, with the exception of India, remains tepid. Even in countries where the central bank has already cut rates, the response from consumers and businesses, broadly, has been muted. This more cautious view of the macroeconomic growth outlook is reflected in sector performance and is consistent with the softer tone in management commentary post-results. Indeed, lower growth and declining inflation point to weak top-line growth for many businesses.

As well as a changing economic backdrop, investors can also expect increased political noise ahead of the US presidential election in November. Combined, these factors are likely to lead to further moves in currency markets.

In managing the portfolio, the key for us is understanding how these factors play out at the company level. We continue to use our quantitative tool, "the Matrix", to identify companies that are rerating and any holdings that are seeing downward revisions. Given concerns over the growth outlook, it is even more important that we adhere to our well-established process of investing in high-quality equities with resilient and visible earnings streams and the propensity to deliver stable growth independent of the wider economy.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 6 because of the extent to which the following risk factors apply:

- Equity Risk - The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Smaller and Mid Cap Risk - The shares of small and mid-cap companies may be less liquid and more volatile than those of larger companies.
- Emerging Markets Risk - The fund may invest in emerging markets, where political, economic, legal and regulatory systems are less developed. As a result, investing in emerging markets may involve higher volatility and a greater risk of loss than investing in developed markets. In particular, where the fund invests in Variable Interest Entity (VIE) structures to gain exposure to industries with foreign ownership restrictions or invests in Chinese assets via Stock Connect/Bond Connect, there are additional operational risks, which are outlined in the prospectus.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Change in net asset value per share	2.66%	5.04%	(6.51%)	(2.30%)
Operating charges	0.09%	0.09%	0.09%	0.09%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.
The change in the net asset value per share is the change from the beginning of the period to the close of the period.
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

abrdn High Yield Bond Fund

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in Sterling and Euro denominated sub-investment grade (high yield) corporate bonds.

Performance Target: To achieve the return of the ICE BofA GBP/Euro Fixed & Floating High Yield Non Financial 3% Constrained Index (Hedged to GBP) plus 0.8% per annum over rolling three year periods (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in Sterling and Euro denominated sub-investment grade corporate bonds.
- The fund may also invest in bonds issued anywhere in the world by governments and corporations, including sub-sovereigns and the following types: investment grade, inflation-linked, convertible, asset backed and mortgage backed.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to identify bonds and derivatives based on analysis of global economic and market conditions (for example, interest rates and inflation) and analysis of a company's prospects and creditworthiness compared to that of the market.
- In seeking to achieve the Performance Target, ICE BofA GBP/Euro Fixed & Floating High Yield Non Financial 3% Constrained Index (Hedged to GBP) is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 2.5%. Due to the fund's risk constraints, the intention is that the fund's performance profile will not deviate significantly from that of the ICE BofA GBP/Euro Fixed & Floating High Yield Non Financial 3% Constrained Index (Hedged to GBP) over the longer term.

Please note: The fund's ability to buy and sell bonds and the associated costs can be affected during periods of market stress which could include periods where interest rates move sharply.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to manage expected changes in interest rates, inflation, currencies or creditworthiness of corporations or governments.

Performance Review

Over the period under review, the Fund returned 3.74% (Source: Factset, Institutional Accumulation shares, net of fees) compared with the return of 5.28% for the Fund's target (Source: Factset, ICE BofAML GBP/Euro Fixed & Floating High Yield Non-Financial 3% Constrained Index (Hedged to GBP) +0.8%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the Fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

abrdn High Yield Bond Fund

Continued

The Fund underperformed its benchmark.

Among biggest individual detractors to the Fund's performance were our positions in Altice France and Altice Financing. Performance in the latter part of the first quarter was dominated by Altice France. Its bonds collapsed in March when the company reneged on its plan to de-lever the business organically through asset sales and threatened to withhold asset sale proceeds unless bondholders participated in a more aggressive debt reduction. This led to a sell-off in Altice France and Altice International. We sold these positions, which generated some outperformance in the second quarter of 2024, as the bonds fell below our exit levels. Another detractor was an above-index exposure to Ard Finance and not holding Heimstaden Bostad. The Fund also underperformed as it has little real estate exposure. The sector had performed negatively in 2023 due to higher interest rates and low office demand, but some structures are now rebounding. Not owning any Heimstaden Bostad, Heimstaden AB, CPI Property or Adler led the Fund to underperform.

On the other hand, the top contributor over the period was Telecom Italia after KKR agreed to acquire its network infrastructure assets. Bondholders were allowed to exchange their existing holdings into the new KKR-owned 'NetCo' business or remain with the retail-focused 'ServCo'. We were able to exchange circa 80% of our position into the NetCo business in return for a 25 bp consent fee. NetCo has been provisionally rated BB+/Ba1, and the new NetCo bonds performed strongly in May. We have built large overweight positions in the NetCo and the ServCo bonds and see scope for further spread compression from here. In addition, our lack of exposure to Elo, Adler, ATOS the French technology company, and Thames Water has generated relative performance. Thames Water's owners announced they no longer intend to inject £500 million of equity capital as their disagreement with the regulator in the UK intensified. In July, Thames Water OpCo bonds were downgraded to HY by the ratings agencies, though they will not be going into major indices due to their categorisation as "whole business securitisations".

Market Review

Early in the review period, the European high-yield (HY) market (as measured by the ICE BofA European Currency Fixed & Floating Non-Financial High Yield Constrained Index, 100% hedged to sterling) posted its fifth consecutive positive monthly return in March.

Over the second quarter, the European HY market also advanced. BB-rated risk generated a return in line with the wider market after outperforming early in the period, as idiosyncratic risk increased in April and the broader market suffered from heightened volatility. CCCs returned

more than 2% in May and June, driven by cooler inflation data and weakening US economic activity. B-rated bonds underperformed in the second quarter and year-to-date, with returns of 1.5% and 2.8%, respectively. There was a pick-up in primary market activity in European HY as the quarterly total issuance, on a gross basis, was €39 billion, the highest amount in three years. Net issuance was €8 billion for the quarter. This was an encouraging sign, after negative cumulative net issuance in 2022 and 2023. Floating-rate issuance also rose. Finally, it should be noted that we had the first CCC bond issues since the beginning of 2022. In the second quarter, the real estate sector was the standout performer, after several capital structures rallied on their better-than-expected ability to sell assets at higher-than-expected valuations. These proceeds have been used by management teams to bolster liquidity profiles and pay down debt. However, we remain cautious about the sector. The energy sector was the second strongest performer while telecommunications, financial services and technology were the notable laggards.

Later in July, the European HY market generated a strong return of 1.25% in July. This was driven primarily by the move in underlying government bonds as the yield dropped by 0.3% to 6.3%, with only 8 basis points (bps) of the move coming from spreads. Bond markets welcomed several positive developments as the French elections avoided an extreme outcome from either the right or left. In the UK elections, the centre-left Labour government won an overwhelming majority while the Bank of England delivered its first interest-rate cut (on 1 August). Perhaps most importantly for bonds, US consumer price inflation delivered a second consecutive dovish surprise, with the month-on-month number drifting into negative territory.

Portfolio Activity and Review

It began as a busy period for new issuance in the European high-yield market, and the Fund participated in a variety of deals. In terms of secondary trading, it was also an active period.

In March, 2024, we sold the &R secured bonds, which we had bought earlier in the first quarter. We also bought higher quality deals from Wepa, Fnac Darty and Neopharm Genili. We bought all four of the sterling deals issued in the quarter. We rolled exposure through refinancings from Pinewood and Together. We also took new positions in bonds issued by Kier Group and Aston Martin. Later in the second quarter, the Fund invested in 18 newly issued bonds from 16 issuers. Of those, 13 were fixed-rate notes, while five were floating-rate notes and three were sterling-denominated. Most of these have performed well since issuance. The Fund participated in several new issues in July. The highest quality issuer was

abrdrn High Yield Bond Fund

Continued

BB+ rated BE Semiconductor Industries, which is benefiting from secular tailwinds and, with a market capitalisation of €9 billion, has a very low debt to equity ratio. Applus, the Spanish testing business, performed the strongest when it started trading in the secondary market. Alain Afflelou, the eye-wear retailer, and Stonegate pubs (which priced with 10.25% coupon) were added back to the portfolio, having been owned in the Fund previously some years ago. Meanwhile, the new issue from Rossini (pharmaceuticals) gave us the opportunity to add exposure to a company we have admired but never felt commanded the right valuation until now (the bonds came with a 6.75% coupon). In the secondary market, we took partial profits in recent new issues from Flutter, Softbank and Synlab and topped up positions in Ineos, Biogroup, O-I Glass, and Upfield at good prices. Finally, in August, trading activity was more limited than usual and was focused primarily on taking profits in positions that had done exceptionally well. These included Alstria Office (real estate investment trust), Morrisons (supermarket), Charter Communications, Frontier Wireline, David Lloyd (leisure clubs) and Punch Taverns. We also sold Constellation Automotive at a profit, as we have grown more cautious about the company. Our only purchases were a switch trade out of Modulaire (infrastructure solutions) secured bonds into the subordinated debt, and a top-up in Aggreko (energy). Aggreko's bonds are trading below the call price, the carry is attractive, and the business is performing well.

In secondary trading, in March, we started selling our overweight position in the 8% 2027 Altice France unsecured bonds and exited entirely at a blended price in the low 40s. We also sold our holdings in Altice International. Following the news that Ardagh had appointed advisors, we sold down our unsecured bonds and switched to short-dated 2026 secured bonds. Ardagh has been affected by an overstocked glass bottle market and lower Budweiser volumes at one of its largest clients Anheuser-Busch InBev. We expect that this market will recover somewhat in 2024. We also de-risked selective positions in 888, Cerba and Asda that we felt had scope to re-price. Over the second quarter, we took new positions in Asda on valuation grounds, though the company is undergoing a difficult period from a market share perspective. We partially covered the underweight to consumer price inflation and SBB in the real estate sector given the low cash price of those bonds and the potential for further upside. Finally, we bought new positions in Q-Park and CeramTec after the companies' strong operational performance. We sold out of Ardagh Glass secured bonds given the risk of value leakage should the controlling shareholder decide to take an aggressive stance with bondholders and the risk of the company cutting the dividend it receives from Ardagh Metals. We

sold our holding in Cerba subordinated bonds given the drop in post-Covid earnings for the lab diagnostics business and the highly levered balance sheet. Finally, we sold our position in DDM to take advantage of rare bid-side liquidity in the bonds due to concerns about the quality of its loan book.

Portfolio Outlook and Strategy

September has started with a spike in volatility caused by weak US economic data. This has drawn out questions about whether a recession is imminent. We have firmly moved away from a market environment where "bad news is good news", driven by the desire to see the US Federal Reserve (Fed) cut interest rates. Instead, we have moved into a new paradigm of "bad news equals bad news" as market participants worry that rates have been elevated for too long and economic activity is about to nosedive. We think the truth is somewhere in between. We suspect the US economy is weaker than most believe, an opinion partially vindicated by the recent large downward revision in payroll numbers. However, we do not believe that the US is necessarily heading for a "hard landing" in the short term (though one should not rule this out). We think inflation will continue to be lower than market expectations, and this is positive for bond markets. We also think the Fed will cut interest rates at least in line with market expectations over the next 18 months. The dichotomy is that equity and credit valuations are discounting a soft landing, while government bond markets are discounting interest-rate cut trajectories that have never occurred outside of a recession. One explanation could be that bonds are simply pricing in significant further disinflation, not a recession. Another explanation could be that one of either risky assets or "risk-free" assets are wrong. We feel that HY is uniquely placed to benefit from differing scenarios given: the natural hedges that exist; the elevated yields on offer; and the expectation that default rates will remain subdued (even if the landing turns out to be harder than most are expecting). For this reason, we believe the asset class retains its appeal, even though heightened volatility should probably be expected in the coming months as financial markets continue to wrestle with the recessionary question.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk			Typically higher rewards, higher risk				
←				→			
1	2	3	4	5	6	7	

Risk and reward indicator table as at 31 August 2024

The fund is rated as 4 because of the extent to which the following risk factors apply:

- Credit Risk – The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- Interest Rate Risk – The fund invests in securities which can be subject to price fluctuation for a variety of reasons including changes in interest rates or inflation expectations.
- High Yield Credit Risk – The fund invests in high yield bonds which typically carry a greater risk of default than those with lower yields.
- ABS/MBS Risk – Asset and mortgage backed securities are subject to prepayment and extension risk and additional liquidity and default risk compared to other credit securities.
- Convertible Securities Risk – These investments can be changed into another form upon certain triggers as such they can exhibit risks typically associated with both bonds and equities. Contingent convertible securities (CoCos) are similar to convertible securities but have additional triggers which mean that they are more vulnerable to losses and volatile price movements and hence become less liquid.
- Derivatives Risk – The use of derivatives may involve additional liquidity, credit and counterparty risks and may lead to substantial loss and increased volatility in adverse market conditions. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

ZA income ^a	31 August 2024	29 February 2024	28 February 2023	28 February 2022
Closing net asset value (£'000)	-	1	1	1
Closing number of shares	-	1,996	1,996	1,996
Closing net asset value per share (pence)	-	46.87	44.73	48.67
Change in net asset value per share	-	4.78%	(8.10%)	(4.29%)
Operating charges	-	0.01%	0.01%	0.02%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^a Z Accumulation share class was launched on 3 March 2023.

^b ZA Income share class was closed on 17 June 2024.

ZA income				
Group 1	-	-	-	0.7298
Group 2	-	-	-	0.7298

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Investment Grade Corporate Bond Fund

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in Sterling-denominated investment grade corporate bonds.

Performance Target: To achieve the return of the Markit iBoxx Sterling Collateralized & Corporates Index plus 0.8% per annum (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in Sterling denominated investment grade corporate bonds.
- The fund may invest in investment grade bonds issued anywhere in the world by governments and corporations, including sub-sovereigns inflation linked, convertible, asset backed and mortgage backed bonds. The fund will employ techniques to reduce (hedge) risk related to currency movements on non-Sterling bonds.
- At the point of investment all bonds shall be investment grade with a credit rating of "BBB-" or higher from at least one major rating agency such as Standard & Poor's, Moody's or Fitch.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to identify bonds and derivatives based on analysis of global economic and market conditions (for example, interest rates and inflation) and analysis of a company's prospects and creditworthiness compared to that of the market.
- In seeking to achieve the Performance Target, the Markit iBoxx Sterling Collateralized & Corporates Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 2.5%. Due to the fund's risk constraints, the intention is that the fund's performance profile will not deviate significantly from that of the Markit iBoxx Sterling Collateralized & Corporates Index over the longer term.

Please note: The fund's ability to buy and sell bonds and the associated costs can be affected during periods of market stress which could include periods where interest rates move sharply.

Derivatives and techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to manage expected changes in interest rates, inflation, currencies or creditworthiness of corporations or governments.

Performance Review

Over the period under review, the fund returned 4.11%. (Source: FactSet, Institutional Accumulation, net of fees). This compared to a return of 3.99% for our performance target. (Source: FactSet, the iBoxx Sterling Collateralized & Corporates Index +0.8%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Any data contained herein which is attributed to a third party ("Third Party Data") is the property of (a) third party supplier(s) (the "Owner") and is licensed for use by abrdn**. Third Party Data may not be copied or distributed. Third Party Data is provided "as is" and is not warranted to be accurate, complete or timely. To the extent permitted by applicable law, none of the Owner, abrdn** or any other third party (including any third party involved in providing and/or compiling Third Party Data) shall have any liability for Third Party Data or for any use made of Third Party Data. Neither the Owner nor any other third party sponsors, endorses or promotes the fund or product to which Third Party Data relates.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

abrdn Investment Grade Corporate Bond Fund

Continued

The fund's security selection and credit positioning both added to returns. On the other side, asset allocation was a small negative relative to the benchmark. At the sector level, banks and collateralised bonds boosted returns, while exposure to the UK water sector was a detractor. By issuer, the largest contributors were Metrocentre, Lloyds Banking Group, Barclays, NatWest and Deutsche Bank. Conversely, Thames Water, Northumbrian Water, Glas Cymru (Welsh Water), Aroundtown and Anglian Water dragged on returns.

Finally, there was a small positive contribution to the fund's performance relative to the benchmark from our duration management and curve positioning. The fund has been long duration relative to the benchmark and this worked well in the last two months of the period as Government bond yields have fallen.

Market Review

Corporate bonds performed well over the period, as central banks started to cut interest rates amid declining inflation.

Government and corporate bond prices largely rose in March, with riskier credit outperforming higher-rated issues. The second quarter was a volatile period for markets as government bond yields moved higher. Credit spreads were choppy but relatively unchanged by the quarter-end. Macroeconomic data finally started showing signs of a slowdown in the US with slightly softer labour markets. Inflation drifted lower year-on-year but ended the quarter roughly where it started the year at just above 3%. Meanwhile, the European Central Bank (ECB) cut interest rates by 0.25% in June, its first rate cut since 2019. The decision was supported by all but one of the ECB's governors, and President Christine Lagarde said the central bank had grown more confident about the inflation outlook.

The start of August was a mixed period for the market, as weak US non-farm payroll numbers coincided with a Japanese yen carry trade unwind after a hawkish rate hike from the Bank of Japan. This triggered a sharp sell-off in equity markets and a widening of credit spreads, which was reversed in subsequent weeks. The US Federal Reserve reduced rates in September for the first time since early 2020, cutting interest rates by 50 basis points (bps). Recent employment data has shown some signs of weakness, as a revision revealed around 68,000 fewer jobs added in the 12 months to March 2024. However, GDP figures were revised upward to an annualised 3.0% in the second quarter. Elsewhere, the Bank of England cut the base rate by 25bps at the start of August. Official data indicated the UK economy had expanded in the second quarter of the year due to strong performance in the

services sector. Lastly, the ECB also cut rates in September by 25bps, as annual eurozone inflation declined to 2.2% in August.

Portfolio Activity and Review

The fund participated in new issues from AA, student accommodation provider Unite Group and subordinated bonds from Coventry Building Society. All performed well.

On the secondary market, we used the weakness in the UK water sector to add to better quality names such as Anglian Water. We switched out of Société Générale into Credit Agricole as an up-in-quality trade for very little spread given up. We added to Axa perpetuals in euros and short-dated SEB additional tier 1 bonds in dollars.

We reduced the position in Barclays senior bonds after a strong rally, as well as the EDF 100-year bonds. We took profits from Centre Parcs, Telefonica and Motobility. Finally, we reduced exposure to Assurant, a healthcare real estate investment trust that specialises in GP surgeries. While the name remained relatively solid, we suspect management may be willing to sacrifice the current single-A rating to fund expansion and spreads are not commensurate with a lower BBB rating.

Portfolio Outlook and Strategy

We expect geopolitical risk to remain elevated. However, conditions still exist for spreads to remain at current levels or even drift lower. Firstly, it feels like we are nearing the first US rate cut. History tells us that total returns are positive, usually strongly so, a year after the first interest rate cut. Europe and the UK are emerging from recession with growth heading back towards the 1–2% range. US growth is slowing to the 1–3% range. This has historically proven an ideal period for credit markets. We therefore maintain our long position in credit but have trimmed financial risk and are keen to maintain healthy levels of cash and gilts. Finally, we maintain a long duration at 0.2 years relative to the benchmark.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk			Typically higher rewards, higher risk				
←				→			
1	2	3	4	5	6	7	

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- Credit Risk - The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- Interest Rate Risk - The fund invests in securities which can be subject to price fluctuation for a variety of reasons including changes in interest rates or inflation expectations.
- ABS/MBS Risk - Asset and mortgage backed securities are subject to prepayment and extension risk and additional liquidity and default risk compared to other credit securities.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks and may lead to substantial loss and increased volatility in adverse market conditions. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Institutional S accumulation share class was closed on 13 September 2023.

Group 1	1.0988	-	1.0988	0.9790
Group 2	1.0489	0.0499	1.0988	0.9790

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdr North American Small & Mid-Cap Equity Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth over the long term (5 years or more) by investing in US and Canadian small and mid-capitalisation equities (company shares).

Performance Target: To achieve the return of the Russell 2500 Index plus 3% per annum over rolling five year periods (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in equities and equity related securities of small and mid-capitalisation companies listed, incorporated or domiciled in the United States of America (US) and Canada or companies that derive a significant proportion of their revenues or profits from US or Canadian operations or have a significant proportion of their assets there.
- For all investments, small and mid-capitalisation companies are defined as any stock having a market capitalisation less than the 20th percentile stock of the Russell 3000 Index (which is used as a representation of the overall US market).
- The fund may also invest in larger capitalisation companies listed, incorporated, or domiciled in the US and Canada.
- Investment in companies listed, incorporated or domiciled in or having a significant proportion of their assets in Canada or deriving a significant proportion of their revenue or profits from Canadian operations is not expected to exceed 20% of the fund's assets.
- The fund may also invest in other funds (including those managed by abrdr) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix at sector and stock level.
- Their primary focus is on stock selection using research techniques to select individual holdings. The research process is focused on finding high quality companies at attractive valuations that can be held for the long term.

- In seeking to achieve the Performance Target, the Russell 2500 Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 10%. Due to the active nature of the management process, the fund's performance profile may deviate significantly from that of the index.
- Please note: The fund's ability to buy and sell small and mid-capitalisation shares and the associated costs can be affected during periods of market stress. In certain circumstances investors in the fund may not be able to sell their investment when they want to.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund returned -0.72%. (Source: FactSet, Institutional Accumulation shares, net of fees). This compared with a return of 4.23% for our performance target (Source: FactSet, Russell 2500 Index +3%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

abrdn North American Small & Mid-Cap Equity Fund

Continued

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The fund underperformed its benchmark due to stock selection and sector allocation. Sector-wise, industrials and consumer staples particularly weighed on relative performance. Conversely, consumer discretionary and energy were the sectors that benefited the fund the most.

At the stock level, Atkore's shares underperformed after the company lowered guidance, as a surge of Mexican steel conduit took significant market share, negatively affecting the company's pricing power. Additionally, demand trends remained weak in some end-markets, including office and residential construction. Alphatec Holdings' shares fell after management lowered its free cash flow guidance, causing investor concern as the company's aggressive growth initiatives have required more investment in inventory and surgical sets than originally anticipated. Five9's shares declined after new bookings failed to materialise, and the company experienced weaker demand from existing customers, forcing a reduction in guidance. ATS Corporation's shares were weak as its Transportation business suffered significant declines due to reduced interest in electric vehicles.

On the other hand, Boot Barn Holdings' shares outperformed after the company announced same-store sales trends ahead of estimates, increasing investor confidence that sales have inflected. Brinker International's marketing investments and value-oriented meal options excited investors about potential outsized foot-traffic growth. The company's initiatives have driven above-category traffic and sales trends. Q2 Holdings' shares outperformed after the company raised guidance, as demand for its digital banking software remained robust. Earlier, it had announced several deals for its digital banking solutions. Aritzia's shares gained as various data points highlighted strong demand, with traffic trends driving solid sales growth despite lower markdowns.

Market Review

US share prices rose in sterling terms over the six-month period.

Growth-focused stocks, such as technology companies, continued to perform well. These stocks are especially sensitive to the end of monetary tightening and the prospect of rate cuts due to the favourable effect on their future discounted earnings.

Faced with a relatively robust economy, the US Federal Reserve (Fed) continued to maintain a restrictive policy stance. The target range for the fed funds rate is currently at 5.25–5.50%, the highest level since 2001. However, a sustained fall in annual inflation and some mixed US economic data mean that investors are now anticipating several interest-rate cuts before the end of the year.

US stock markets rose steadily over most of the period. Once again, there was a good performance from the technology sector, especially artificial intelligence-related stocks, such as NVIDIA, Microsoft and Alphabet. Equities performed well in March as encouraging inflation trends led to optimism about future interest-rate cuts. However, equities then weakened in April as higher-than-expected inflation over the first quarter of the year led to renewed fears of interest rates staying higher for longer. Equities rebounded in May and June, though, due to fresh hopes of interest-rate cuts by the end of the year, as well as better-than-expected corporate earnings. After fears of a US recession caused a sell-off in equities from mid-July to the start of August, they then rebounded to recover most of their losses before the end of the period.

Portfolio Activity and Review

We initiated holdings in several companies over the period.

Enpro provides advanced sealing and surface technologies used in growing end-markets such as semiconductors, photonics, industrial processes, aerospace, food, biopharmaceuticals, and life sciences. Despite the soft semiconductor backdrop, the company has continued to expand margins and grow earnings through operational efficiencies and strategic tuck-in acquisitions.

Corcept Therapeutics is a commercial-stage biopharmaceutical company specialising in drugs to treat Cushing's syndrome and other cortisol-related diseases. The company will soon seek approval for its next-generation drug, which avoids some of the most worrisome side effects of the current treatment. Additionally, it will release data illustrating the significant underdiagnosis of Cushing's, which should meaningfully increase the market size.

abrdn North American Small & Mid-Cap Equity Fund

Continued

H&E Equipment Services is a provider of heavy construction and industrial equipment. We believe the company's recent footprint expansion could allow it to capitalise on increased industrial spending, supported in part by stimulus funding.

Amicus Therapeutics is a biotechnology company operating in the rare diseases field. It has achieved profitability through significant sales of one drug, while launching a second product that is expected to achieve strong sales growth.

Q2 Holdings is a provider of digital banking software and lending solutions, which we believe has a differentiated and comprehensive product suite to help banks as they increasingly digitise their operations.

Live Oak Bancshares is a leading lender to small businesses. We believe the company's unique operating model should drive continued market-share gains and above-average growth opportunities. At the same time, we expect lower interest rates to disproportionately benefit Live Oak given its relatively high cost of funding.

Lantheus Holdings, a leading radioligand diagnostic and therapeutic company, continues to benefit from increased use of its positron emission tomography (PET) imaging products in prostate cancer, while pushing forward with multiple other product candidates. The recent Centers for Medicare & Medicaid Services decision to provide specific reimbursement for PET imaging agents should encourage continued adoption.

Northern Oil & Gas is an upstream energy asset owner. We believe the company could benefit from its diversified exposure to experienced operators across multiple basins.

Vertex is a pioneer in tax technology. The company's software solutions help customers stay in compliance with indirect taxes that occur in tax jurisdictions worldwide. We believe investors are overly conservative regarding the multi-year opportunity of converting legacy on-premises systems to more robust cloud solutions.

JFrog is a leader in binary management, which is a core technology in software deployment. We believe this leading position could allow the company to benefit from growth in software builds. Additionally, JFrog's continued shift from a single-solution to a platform provider could support growth over the long term.

Knife River Corporation is an integrated construction materials and services company, which we believe is well-positioned to capitalise on gradual increases in infrastructure spending over the next several years while successfully executing its margin-improvement strategy.

Atmus Filtration Technologies is a manufacturer of filtration systems for heavy-duty trucks and machines. We believe the company's strength in research and development, along with its expansive product portfolio, could allow it to capitalise on rising air standards.

Meanwhile, we disposed of our holdings in several companies over the period.

We sold our position in Amdocs after determining that key telecommunications customers were slowing investments, resulting in a more difficult demand environment.

CONMED Corporation has been facing concerns that AirSeal, a key growth driver for the company, would experience decreased utilisation due to the launch of a new surgical robot that might reduce demand. Although the stock pressure seemed overdone, we disposed of the position to fund higher-conviction ideas.

We sold Perficient, an information technology consulting company, after it agreed to an acquisition by a private firm.

We divested our holding in Trex after the company released disappointing earnings and lowered its outlook, as repair and remodel spending has softened.

We sold Pacira BioSciences after recognising increased risk to its intellectual property protection, especially as a generic manufacturer unexpectedly gained approval from the Food and Drug Administration.

We disposed of our position in LPL Financial Holdings due to intensifying competitive dynamics and increased regulatory scrutiny.

After benefiting from supply-chain disruptions and weaker competitors exiting the industry, we decided to sell our position in trucker ArcBest Corporation as sluggish industrial activity reduced our demand expectations.

We sold our position in Atkore after determining that government incentives were taking longer than expected to materialise, while import competition was intensifying.

We disposed of ChampionX Corporation after the announcement of its acquisition by oilfield-services company Schlumberger.

We sold Harmony Biosciences Holdings after a competing drug class used to treat narcolepsy showed notable efficacy, raising questions on the durability of Harmony's sales in the future.

We sold our position in DoubleVerify Holdings after management cited a shift by customers away from a popular, premium-priced open-web product towards lower-margin social media and video products.

Portfolio Outlook and Strategy

US economic growth has been resilient, but the pace has moderated since the post-pandemic recovery, with slower consumer spending and subdued investments due to higher interest rates. In line with this, inflation has also slowed in recent months, which we expect to continue with ongoing easing in the labour market, wage growth, and housing inflation. Given the shifting macroeconomic dynamics, Fed officials have signalled that more accommodative monetary policy is quickly approaching, with potential rate cuts expected at upcoming meetings. While the Fed continues to take a data-dependent approach to decision-making, we expect the central bank to implement rate cuts gradually, which is consistent with its conservative strategy used during the rate-hike cycle.

Against this backdrop, the outlook for small and mid-cap stocks remains positive for several reasons. Firstly, small and mid-cap stocks trade at a significant discount compared to their larger counterparts. We expect the broadening out away from the 'Magnificent Seven' to continue as the same fundamental tailwinds driving these stocks higher flow through to the more economically sensitive small and mid-cap companies. Additionally, corporate balance sheets are flush with cash, often triggering merger and acquisition activity, with small and mid-cap companies historically benefiting as a result. Finally, an elevated interest-rate environment creates structural advantages for higher-quality companies, a core tenet of the strategy's investment process. These companies are better equipped to handle higher interest rates relative to their lower-quality peers. Altogether, this combination of factors supports our positive outlook for the small and mid-cap strategy.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 6 because of the extent to which the following risk factors apply:

- **Equity Risk** – The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- **Smaller and Mid Cap Risk** – The shares of small and mid-cap companies may be less liquid and more volatile than those of larger companies.
- **Concentration Risk** – A concentrated portfolio (whether by number of holdings, geographic location or sector) may be more volatile and less liquid than a diversified one.
- **Derivatives Risk** – The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

abrdn Sterling Corporate Bond Fund

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in Sterling-denominated investment grade corporate bonds.

Performance Target: To exceed the IA Sterling Corporate bond Sector Average return (after charges) over 1 year and be top quartile over rolling three year periods. The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the sector.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in Sterling denominated investment grade corporate bonds.
- The fund may also invest in bonds issued anywhere in the world by governments and corporations, including sub-sovereigns, sub-investment grade, inflation-linked, convertible, asset backed and mortgage backed bonds. The fund will employ techniques to reduce (hedge) risk related to currency movements on non-Sterling bonds.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to identify bonds and derivatives based on analysis of global economic and market conditions (for example, interest rates and inflation) and analysis of a company's prospects and creditworthiness compared to that of the market.
- In seeking to achieve the Performance Target, the Markit iBoxx Sterling Collateralized & Corporates Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 3%. Due to the active nature of the management process, the fund's profile may deviate significantly from the Markit iBoxx Sterling Collateralized & Corporates Index over the long term.

Please note: The fund's ability to buy and sell bonds and the associated costs can be affected during periods of market stress which could include periods where interest rates move sharply.

Derivatives and Techniques

- The fund will make routine use of derivatives to reduce risk, reduce cost and/or generate extra income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to manage expected changes in interest rates, inflation, currencies or creditworthiness of corporations or governments.

Performance Review

Over the period under review, the Fund returned 4.49% (Source: FactSet, Institutional Accumulation, net of fees). This compared to a return of 4.35% for our performance target. (Source: Morningstar Direct, the IA Sterling Corporate Bond Sector Average).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: Morningstar Direct. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Any data contained herein which is attributed to a third party ("Third Party Data") is the property of (a) third party supplier(s) (the "Owner") and is licensed for use by abrdn**. Third Party Data may not be copied or distributed. Third Party Data is provided "as is" and is not warranted to be accurate, complete or timely. To the extent permitted by applicable law, none of the Owner, abrdn** or any other third party (including any third party involved in providing and/or compiling Third Party Data) shall have any liability for Third Party Data or for any use made of Third Party Data. Neither the Owner nor any other third party sponsors, endorses or promotes the fund or product to which Third Party Data relates.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The Fund's security selection and credit positioning both added to returns. On the other side, asset allocation was negative. By credit rating, high-yield and A rated bonds performed well, while AA rated bonds detracted. At the sector level, banks and collateralised bonds boosted returns, while government-related credit hurt performance. By issuer, the largest contributors

abrdn Sterling Corporate Bond Fund

Continued

were Metrocentre, Lloyds Banking Group, Barclays, NatWest and Rabobank. Conversely, Thames Water, the Government of the UK, Anglian Water, Aroundtown and Northumbrian Water dragged on returns.

Market Review

Corporate bonds performed well over the period, as central banks started to cut interest rates amid declining inflation.

Government and corporate bond prices largely rose in March, with riskier credit outperforming higher-rated issues. The second quarter was a volatile period for markets as government bond yields moved higher. Credit spreads were choppy but relatively unchanged by the quarter-end. Macroeconomic data finally started showing signs of a slowdown in the US with slightly softer labour markets. Inflation drifted lower year-on-year but ended the quarter roughly where it started the year at just above 3%. Meanwhile, the European Central Bank (ECB) cut interest rates by 0.25% in June, its first rate cut since 2019. The decision was supported by all but one of the ECB's governors, and President Christine Lagarde said the central bank had grown more confident about the inflation outlook.

The start of August was a mixed period for the market, as weak US non-farm payroll numbers coincided with a Japanese yen carry trade unwind after a hawkish rate hike from the Bank of Japan. This triggered a sharp sell-off in equity markets and a widening of credit spreads, which was reversed in subsequent weeks. The US Federal Reserve reduced rates in September for the first time since early 2020, cutting interest rates by 50 basis points (bps). Recent employment data has shown some signs of weakness, as a revision revealed around 68,000 fewer jobs added in the 12 months to March 2024. However, GDP figures were revised upward to an annualised 3.0% in the second quarter. Elsewhere, the Bank of England cut the base rate by 25bps at the start of August. Official data indicated the UK economy had expanded in the second quarter of the year due to strong performance in the services sector. Lastly, the ECB also cut rates in September by 25bps, as annual eurozone inflation declined to 2.2% in August.

Portfolio Activity and Review

The fund has generally reduced credit exposure especially in financials as spreads continued to tighten. Real estate names have performed strongly since the fourth quarter of 2023, and names such as Berkley were sold. We also moved to a more neutral stance on Airports as this was another sector which has done well, and is starting look

fully valued. Telecom names such as AT&T, Vodafone and Verizon all got to multi-year tight spread levels, and we therefore reduced exposure here too. Meanwhile, spreads in Danish utility company Orsted fully recovered from the spread widening seen at the end of last year that was caused by cost overruns on two US offshore wind farms, so we reduced exposure to this name. We trimmed Arqiva (TV masts) and reduced the overweight to Centre Parcs following strong performance.

Duration on the fund was increased from neutral at the start of the year as markets pushed back the early rate cuts to the second half of the year, which is more fitting with our view.

The fund added to its AABOND position through an attractively priced new issue and added another bond on the curve in the secondary market. Its 2025 bond was tendered for as part of the new issue process. We bought Banco de Sabadell as the analyst moved his recommendation to overweight as BBVA sought to acquire the company which could lead to an upgrade to IG. The fund also added to AT1 debt with less than two years to call date as the yields remain attractive and the bonds should have relatively low volatility. Enel and Cadent bonds were added to as well as spreads underperformed in late June.

Portfolio Outlook and Strategy

We remain cautious on credit spreads here given valuations, but haven't implemented an underweight position. The technical position remains strong with ongoing demand and low levels of issuance. While we have seen periods of increased volatility, around the surprise French election and yen carry trade unwind in August, the market has quickly recovered. We expect issuance into year end to remain front loaded as there remains a fairly small issuance window before we get into US elections. We remain overweight in duration terms versus the index as we view government bond yields as too high. Inflation has hit the 2% target in the UK and there are early signs that both employment and core inflation numbers are moderating all of which give the BoE room to cut rates.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk			Typically higher rewards, higher risk				
←				→			
1	2	3	4	5	6	7	

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- Credit Risk – The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- Interest Rate Risk – The fund invests in securities which can be subject to price fluctuation for a variety of reasons including changes in interest rates or inflation expectations.
- High Yield Credit Risk – The fund invests in high yield bonds which typically carry a greater risk of default than those with lower yields.
- ABS/MBS Risk – Asset and mortgage backed securities are subject to prepayment and extension risk and additional liquidity and default risk compared to other credit securities.
- Convertible Securities Risk – These investments can be changed into another form upon certain triggers as such they can exhibit risks typically associated with both bonds and equities. Contingent convertible securities (CoCos) are similar to convertible securities but have additional triggers which mean that they are more vulnerable to losses and volatile price movements and hence become less liquid.
- Derivatives Risk – The use of derivatives may involve additional liquidity, credit and counterparty risks and may lead to substantial loss and increased volatility in adverse market conditions. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Z Income ^D	31 August 2024	29 February 2024
Closing net asset value (£'000)	1	1
Closing number of shares	2,000	2,000
Closing net asset value per share (pence)	52.05	51.48
Change in net asset value per share	1.11%	2.84%
Operating charges	0.09%	0.09%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A P Income share class was launched on 24 February 2023.

^B Q Income share class was launched on 24 February 2023.

^C Z Accumulation share class was launched on 24 February 2023.

^D Z Income share class was launched on 28 March 2023.

Group 1	0.7135	-	0.7135	0.7592
Group 2	0.7135	-	0.7135	0.7592

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn UK Ethical Equity Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth over the long term (5 years or more) by investing in UK equities (company shares) which adhere to the abrdn UK Ethical Equity Investment Approach.

Performance Target: To achieve the return of the FTSE All-Share Index, plus 2% per annum over rolling five year periods (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in equities and equity related securities of companies listed, incorporated, or domiciled in the UK or companies that derive a significant proportion of their revenues or profits from UK operations or have a significant proportion of their assets there.
- All investments will adhere to the abrdn UK Ethical Equity Investment Approach available on www.abrdn.com under "Fund Centre".
- The fund may also invest in other funds (including those managed by abrdn), money-market instruments, and cash.
- The fund will invest at least 70% in companies that the abrdn ESG House Score quantitatively identifies as having preferred ESG characteristics in a global context in accordance with the abrdn UK Ethical Equity Investment Approach. This analysis covers areas such as human rights, labour rights, environmental safeguards and combating bribery and corruption.
- The approach utilises abrdn's equity investment process, where companies invested in are given an overall quality rating, a component of which is the ESG Quality Rating which enables the management teams to qualitatively identify and avoid ESG laggards.
- As part of the approach the fund applies a set of company exclusions which are related but not limited to animal testing, weaponry, pornography, gambling, tobacco and alcohol.

Management Process

- The fund management team use their discretion (active management) to maintain a diverse asset mix at sector and stock level.

- Their primary focus is on stock selection using research techniques to select individual companies where the management team have a different view than that of the market, and which align with their views regarding future economic and business conditions.
- Engagement with external company management teams is used to evaluate the ownership structures, governance and management quality of those companies in order to inform portfolio construction.
- Through the application of the abrdn UK Ethical Equity Investment Approach the fund is expected to have a lower carbon intensity than the FTSE All-Share Index.
- This approach reduces the benchmark investable universe by a minimum of 20%.
- In seeking to achieve the Performance Target, the FTSE All-Share Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 12%. Due to the ethical nature of the management process, there are a material number of stocks and sectors in the FTSE All-Share Index that the fund is unable to invest, which means the fund's performance profile may deviate significantly from that of the FTSE All-Share Index.

Derivatives and techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund returned 13.50% (Source: FactSet, Institutional Accumulation net of fees). This compared with a return of 13.53% for our performance target (Source: FactSet, the FTSE All-Share Index Total Return+2%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The most significant positive contribution to the fund's relative returns came from our choice of holdings in the financials sector. A zero weighting in energy also proved highly beneficial. Meanwhile, our stock picks in consumer discretionary added value, although this was partially offset by the fund's overweight position in the sector. Conversely, an above-benchmark weighting in technology proved disappointing, as did a lack of exposure to the healthcare segment.

At a stock level, our position in Hargreaves Lansdown was the most significant contributor to performance. The shares advanced following news that the firm had received an opportunistic bid from a consortium led by CVC. Value also came from our holding in Molten Ventures, with the shares rising after the company issued strong full-year results in June. A zero weighting in Diageo proved beneficial when its share price fell due to pressure on consumer spending. Elsewhere, Keywords Studios rose after the company confirmed it had received a possible cash offer from EQT in May; and NatWest Group boosted returns following robust full-year results, including an 18% return on tangible equity.

Less positively, a lack of exposure to AstraZeneca hurt the fund's relative performance when the company posted quarterly results that exceeded analysts' expectations. Our exposure to Sage also dented returns after the firm published weaker-than-expected results and announced a moderate downgrade to full-year revenue guidance.

Lastly, CVS Group declined after the UK's competition regulator announced an investigation into the veterinary services market; and OSB Group issued guidance for weaker net interest margins.

Market Review

In common with many global equity markets, the UK stock market made strong gains in the review period, with the FTSE 100 Index reaching a new all-time high in May. The positive sentiment was mainly due to a more positive global economic outlook than many had feared at the start of the year. Continued falls in the inflation rate and the first interest rate cut in four years by the Bank of England (BoE) in July also boosted the market. A general election in early July produced a clear outcome, with the Labour Party gaining a substantial majority. Early announcements from the new government supported a more positive view of the UK's domestic prospects. Large and small-cap stocks rose during the period, and there was a notable increase in takeover activity.

The economy's recovery helped banking stocks; more broadly, equities were supported by the ongoing resilience of the US economy and hopes that artificial intelligence could drive significant productivity improvements. However, some geopolitical tensions weighed on investor confidence, with the conflicts in the Middle East and Ukraine threatening to escalate while US-China relations deteriorated further.

At the end of the period, falls in oil prices over the month led to weakness in the energy sector, while the prospect of interest-rate cuts in the US caused sterling to strengthen against the dollar, putting London-listed stocks under further pressure.

In economic news, the UK Consumer Prices Index came in at 2.2% in July, the first rise in the inflation rate in 2024 but a smaller increase than analysts had expected. The Bank of England cut the base rate by 0.25% at the start of August, its first reduction since the beginning of the Covid-19 pandemic in 2020. Official data indicated the UK economy had expanded in the second quarter of the year due to solid service sector performance. More up-to-date figures showed a further expansion of private-sector activity in August, with hiring rates at their highest level in more than a year. The new Labour government warned of challenges in the UK's public finances, and several tax increases were expected to be announced in the autumn Budget.

Portfolio Activity and Review

In terms of portfolio activity, we introduced a new position in Wise, a disruptive company specialising in foreign exchange transfers. The business has a clear competitive advantage, high margins, a solid financial position and a long-term strategy of reinvesting its profits to improve the customer experience. We also bought student accommodation real estate developer Unite. The outlook for rental demand is robust, and we believe neither this nor potential development gains are adequately captured in the current valuation. In another move, we initiated a position in Compass, a leading global outsourced food provider with formidable competitive advantages, given its scale.

Meanwhile, we exited pulp and paper company Mondi as its shares rose following a failed bid for peer DS Smith and introduced sector peer Smurfit Kappa, which had recently acquired US player WestRock. This move could deliver upside if it enables Smurfit to improve its operations. We also took a new position in retailer WH Smith and participated in the flotation of Rosebank Industries.

Regarding sales, we removed DS Smith, Lloyds Banking Group, GB Group, Hargreaves Lansdown, Keyword Studios, Vodafone and Spire Healthcare, and Rightmove to pursue more appealing stock ideas elsewhere.

Portfolio Outlook and Strategy

Despite recent market volatility, the UK macroeconomic landscape is gradually improving, with growth set to recover slowly, inflation moderating, and consumer confidence picking up, painting a more encouraging picture than at the turn of the year. The recent change in government in the UK has brought a degree of political stability that reassures markets. However, attention is now focused on the upcoming autumn Budget, which is expected to have significant implications for a number of sectors.

Therefore, we remain focused on bottom-up stock picking, examining prospects on a company-by-company basis over the fund's three- to five-year investment horizon. The focus is on finding businesses within the acceptable universe defined by the fund's ethical policy. These companies should be well positioned for growth with resilient earnings streams and underappreciated business models.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 6 because of the extent to which the following risk factors apply:

- Equity Risk - The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- ESG Investment Risk - Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in assets which similar funds do not (and thus perform differently) and which may not align with the personal views of any individual investor.
- Concentration Risk - A concentrated portfolio (whether by number of holdings, geographic location or sector) may be more volatile and less liquid than a diversified one.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

abrdn UK Government Bond Fund

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in UK Government bonds.

Performance Target: To achieve the return of the FTSE Actuaries UK Conventional Gilts All Stocks Index plus 0.5% per annum (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

Performance Comparator: IA UK Gilt Sector Average.

The ACD believes this is an appropriate target/comparator for the fund based on the investment policy of the fund and the constituents of the index/sector.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in government bonds issued or guaranteed by the UK Government.
- The fund may also invest in investment grade bonds issued anywhere in the world by governments, sub-sovereigns and corporations including inflation-linked bonds. The fund will employ techniques to reduce (hedge) risk related to currency movements on non-Sterling bonds.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to identify investments after analysing global economic and market conditions (for example, interest rates and inflation) in addition to analysing of individual bonds and derivatives.
- In seeking to achieve the Performance Target, the FTSE Actuaries UK Conventional Gilts All Stocks Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 1.5%. Due to the fund's risk constraints, the intention is that the fund's performance profile will not deviate significantly from that of the FTSE Actuaries UK Conventional Gilts All Stocks Index over the longer term.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives can be used to generate growth, consistent with the fund's risk profile, if market prices are expected to rise ("long positions") or fall ("short positions").
- These positions can be used in overseas markets.
- Derivatives include instruments used to manage expected changes in interest rates, inflation, currencies or creditworthiness of corporations or governments.

Performance Review

Over the review period, the fund returned 4.36%. (Source: FactSet, Institutional Accumulation shares, net of fees.) This compared to a return of 3.38% for our performance target (Source: FactSet, FTSE Actuaries UK Conventional Gilts All Stocks Index +0.5%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market Review

The six-month review period was a volatile one for UK government bonds (Gilts).

In March 2024, the Bank of England (BoE) kept interest rates on hold at 5.25%. From a data perspective, the key metrics for the BoE continued to move lower as inflation fell and the labour market loosened. The combination of these events resulted in Gilt yields moving lower.

During the second quarter of 2024, sovereign bonds were subject to volatility, as market participants reduced the extent of policy easing projected for 2024. In May, the BoE's Monetary Policy Committee (MPC) meeting was viewed as dovish by the market. While inflation had slowed to the BoE's 2% target, price growth in the services sector was significantly higher. Then, in June, the MPC voted 7-2 to hold rates at 5.25%, with two members preferring a cut.

Later in July, UK government bond yields moved lower across the curve. Nevertheless, stronger economic data, accompanied by non-committal comments from members of the BoE's MPC, meant uncertainty remained over whether interest rates would be cut at the August meeting, which it was—by 25 basis points (bps) to 5%. The decision was a close 5-4 outcome and was said to be finely balanced. By the end of August, markets viewed a consecutive cut at the September meeting as unlikely, with pricing instead implying the next cut would come in November. Market data in August was mixed; labour market data was stronger than consensus. Meanwhile, inflation data showed a sharp fall in services inflation (5.2% year-on-year versus 5.5% expected), contributing to a softer-than-expected release for both core and headline consumer price inflation figures.

Portfolio Activity and Review

The fund started the period viewing duration from a tactical standpoint, as we felt duration should remain relatively rangebound. As global yields started to rise in late March the fund began to establish a more structural long duration position. However, the timing proved to be too soon, as global yields moved aggressively higher as US inflation surprised to the upside in April. Duration was therefore a drag on performance in April. We felt yields had moved too far in April, as although the data was better than the market expected, we saw this improvement of data as temporary. We were therefore happy to maintain

the long duration positioning throughout the summer months. As yields moved lower at the end of July on the surprise downturn in US labour market data, the fund started to reduce its position.

Other notable positions throughout the quarter came from our cross-market views, the fund added long Germany versus US early on in the period. The better-than-expected US data in the first quarter was a US-specific story. As US yields surged higher in April leaving European yields behind, the Fund took profits. As already stated, we felt the better-than-expected US data was a temporary driver. The US growth exceptionalism story was over-played from our perspective.

A further cross-market story for the second quarter was the political uncertainty in France. On the announcement of a French election in June, the fund sold France versus Germany. As the election approached, and the yield spread widened, the fund took profits.

In curve strategies, the fund held a UK front-end steepener throughout the period which worked well. The fund also held a US front-end steepener versus an Australian front-end flattener, as we felt the two respective central banks were on very different monetary policy courses. As the US curve steepened in June and July, the fund closed the US leg.

Finally, in curve strategies, the fund held a UK long-end flattener versus a US steepener, as we felt the UK curve continues to be too steep versus its peers.

Portfolio Outlook and Strategy

As we approach the final quarter of 2024, we still believe we are nearing the end of the economic cycle, reinforced by incoming data across developed-market economies showing a softening in activity, a loosening in labour markets, and a decline in inflation measures. Therefore, we see medium-term value in owning global government bonds, anticipating an interest rate-cutting cycle. The decline in yields should be accompanied by a steepening of yield curves. The UK election victory for the Labour Party, coupled with the BoE's desire to cut rates, should result in Gilts performing well compared to their peers. Currently, the BoE is expected to continue its easing cycle in the final months of 2024, with at least one more 25bp rate cut anticipated. Despite the generally positive outlook, we remain ready to adjust the portfolio to navigate potential volatility.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk			Typically higher rewards, higher risk				
←				→			
1	2	3	4	5	6	7	

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- Credit Risk - The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- Interest Rate Risk - The fund invests in securities which can be subject to price fluctuation for a variety of reasons including changes in interest rates or inflation expectations.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks and may lead to substantial loss and increased volatility in adverse market conditions. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Group 2	0.4591	1.1697	1.6288	1.2918

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdrn UK Smaller Companies Fund

For the six months ended 31 August 2024

Investment Objective

To generate growth over the long term (5 years or more) by investing in UK small-capitalisation equities (company shares).

Performance Target: To achieve the return of the Deutsche Numis Smaller Companies Plus AIM ex Investment Companies Index plus 3% per annum (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

Performance Comparator: IA UK Smaller Companies Equity Sector Average.

The ACD believes this is an appropriate target/comparator for the fund based on the investment policy of the fund and the constituents of the index/sector.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in small-capitalisation equities and equity related securities of companies listed, incorporated, or domiciled in the UK or companies that derive a significant proportion of their revenues or profits from UK operations or have a significant proportion of their assets there.
- Small capitalisation companies are defined as any stock having a market cap less than the 10th percentile stock of the overall UK equity market.
- The fund may also invest up to 40% in mid and larger capitalisation companies listed, incorporated or domiciled in the UK.
- The fund may also invest in other funds (including those managed by abrdrn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix at sector and stock level.
- Their primary focus is on stock selection using the management team's quality, growth and momentum approach. It aims to identify companies that exhibit a range of high quality characteristics, operate in growing markets and display positive business momentum.
- In seeking to achieve the Performance Target, the Deutsche Numis Smaller Companies Plus AIM ex Investment Companies Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking

error") between the returns of the fund and the index, should not exceed 10%. Due to the active nature of the Investment process, the fund's performance profile may deviate significantly from that of the Deutsche Numis Smaller Companies Plus AIM ex Investment Companies Index.

Please note: The fund's ability to buy and sell small and mid-capitalisation shares and the associated costs can be affected during periods of market stress. In certain circumstances investors in the fund may not be able to sell their investment when they want to.

Derivatives and Techniques:

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund rose by 15.53% (Source: FactSet, Institutional Accumulation, net of fees). This compared to a return of 14.74% by the performance target (Source: FactSet, the Deutsche Numis Smaller Companies Plus AIM ex Investment Companies Index +3%).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

abrdn UK Smaller Companies Fund

Continued

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The fund outperformed the performance target in the review period with good stock selection the main factor behind the outperformance. Our overweight to the financials sector also proved beneficial. Our holding in fund administration group JTC emerged as the top contributor on news of continued strong organic execution, while the firm's recent acquisitions have supported earnings growth. Shares in XPS Pensions Group rose as the company continued to perform well and won significant new contracts. In addition, the firm was promoted to the FTSE 250 Index during the period.

Elsewhere, ventilation equipment business Volution added value when it released better-than-expected earnings results. Another attractive feature is that the company's balance sheet should allow for M&A activity. Coats Group shares also made progress with investors appearing increasingly comfortable that the company has come through the destocking cycle in its end markets, and continues to build market share, especially through product innovation in the sustainable threads category.

Shares in Hilton Food Group advanced after the company issued a trading statement that impressed the market, with further signs the company is back on track to generate sustainable growth. Sentiment was also helped by news of positive trading performances at some of the firm's larger customers. Digital publisher LBG Media was another notable contributor thanks to a positive update from the company, and the management's conviction that annual revenue of £200m is achievable given LBG's market-leading audience and differentiated offering to brands.

On the other hand, YouGov was the top individual detractor following weak results with investor concerns not adequately addressed by the new management team. CVS Group dropped back after the UK's competition regulator announced an investigation into the veterinary services market. Bytes Technology was negatively affected by tighter corporate spending and slower decision-making. Uncertainty around its former CEO's trading activity also impacted sentiment. 4imprint Group posted an upbeat trading statement early in the period but the shares later weakened due to concerns about economic risks in the US that could weigh on the company's revenue growth.

Shares in Auction Technology Group also weakened after the company reported a negative impact from pricing changes in one part of the business. However, these changes have now been reversed and the firm is making strong progress overall.

Market Review

UK smaller company stocks made strong gains in the review period thanks to continued falls in the rate of inflation and the first cut in interest rates in four years by the Bank of England. Sentiment was also aided by data that broadly indicated a more positive outlook for the British economy. A general election in early July produced a clear outcome with the Labour Party gaining a substantial majority. Early announcements from the new government supported a more upbeat view of the UK's domestic prospects although they also warned of challenges in the UK's public finances, and a number of tax increases are expected to be announced in the autumn Budget.

The FTSE Small Cap Index rose by 10.2% in the period, beating the 8.9% increase by the FTSE 100 Index of larger companies. Telecoms and financial stocks saw some of the biggest gains in the period, helped by the recovery in the economy. Gains among small- and mid-cap stocks were supported by an increased level of takeover activity. However, some geopolitical tensions still weighed on investor confidence, with the conflicts in the Middle East and Ukraine threatening to escalate while US-China relations deteriorated further.

In economic news, the inflation rate in the UK fell to its long-term 2% target in May before ticking up slightly in July. Official statistics showed that the UK economy returned to growth in the first quarter of 2024, following a shallow recession in the final two quarters of 2023, expanded further in the second quarter mainly as a result of a strong performance in the services sector.

Portfolio Activity and Review

We introduced several new positions to the fund in the period, including in real estate agent Savills. We expect that previous headwinds for the company, such as the slowdown in the capital markets and softer leasing activity, should abate and lead to material profit growth over the next two years. We also added business-review platform Trustpilot, where growth is strong, its addressable market is large and the business benefits from strong operational leverage. Furthermore, the company's business strategy in the US is showing impressive results. Shares in automated vending machine operator ME Group were purchased in July based on the potential for further expansion in existing geographies and new territories. We also think the firm's

abrdn UK Smaller Companies Fund

Continued

high margins and returns will endure and improve in the coming years. Finally, we initiated a position in computing company Raspberry Pi through its IPO. The firm is a fast-growing, high-quality and competitively positioned business that has the potential to be a positive addition to the UK market.

Conversely, we exited our positions in a number of stocks, including business software provider Marlowe, consultancy services group Alpha-FMC, following a private-equity takeover bid, and technology solutions firm Midwich. We also sold our stake in Big Technologies as the company's earnings momentum had slowed and there was some disappointment at its failure to win major contracts.

Portfolio Outlook and Strategy

August was a more unsettled market for equities globally, though share prices recovered well following the initial sharp sell-off. Economic and political challenges remain the key sources of uncertainty, with investors fearing that a slowdown in growth in the US as well as the forthcoming presidential election could lead to heightened volatility. Domestically, while economic and employment data looks solid and sterling remains strong, there are concerns relating to potential tax increases in the October Budget.

We continue to see a strong earnings growth outlook in the UK small- and mid-cap space, with healthy double-digit projections across the FTSE 250 far exceeding the forecasts for limited growth in the FTSE 100. Investor appetite for UK stocks remains healthy, though flows to the sector have eased off after a small recovery from historic lows earlier in the year. We hope inflows will gather momentum as markets gain more confidence. Valuations remain attractive, especially in the face of the earnings growth forecast, and bid activity continues to play an important role in the UK market. Lastly, we reiterate our belief that the start of the rate-cutting cycle should be a further positive catalyst for smaller companies.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 August 2024.

The fund is rated as 6 because of the extent to which the following risk factors apply:

- Equity Risk - The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Smaller and Mid Cap Risk - The shares of small and mid-cap companies may be less liquid and more volatile than those of larger companies.
- Concentration Risk - A concentrated portfolio (whether by number of holdings, geographic location or sector) may be more volatile and less liquid than a diversified one.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Z Accumulation share class was launched on 23 June 2023.

abrdn American Income Equity Fund (closed)

For the six months ended 31 August 2024

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing in US equities (company shares).

Performance Target: To deliver a yield greater than that of the S&P 500 Index over a rolling five year period (before charges) and achieve a return in excess of the S&P 500 Index over a rolling five year period (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund and the constituents of the index.

Investment Policy

Portfolio Securities

- The fund will invest at least 70% in equities and equity related securities of companies listed, incorporated or domiciled in the US or companies that derive a significant proportion of their revenues or profits from US operations or have a significant proportion of their assets there.
- The fund may also invest up to 20% in companies listed, incorporated or domiciled in Canada or Latin America.
- The fund may also invest in other funds (including those managed by abrdn) and money-market instruments, and cash.

Management Process

- The management team use their discretion (active management) to maintain a diverse asset mix at sector and stock level.
- Their primary focus is on stock selection using research techniques to select individual holdings. Given the fund's income objective, the management team place particular emphasis on understanding business fundamentals and dynamics and the impact this has on cash flow generation and the company's ability to allocate cash effectively.
- In seeking to achieve the Performance Target, the S&P 500 Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ("tracking error") between the returns of the fund and the index is not ordinarily expected to exceed 9%. Due to the income nature of the management process, the fund's performance profile may deviate significantly from that of the S&P 500 Index.

Derivatives and Techniques

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the fund's existing allocations to company shares.

Performance Review

Over the period under review, the fund returned 2.20%. (Source: FactSet, Institutional Accumulation Shares). This compared with a return of 3.71% for our performance target (Source: FactSet, S&P 500 Index). Meanwhile, the Institutional Income share class yield was 2.04% as of 30 April 2024, versus the target yield of 3.76% (the S&P 500 Index).

Fund data source: FactSet; Basis: total return, published NAV to NAV, net of annual charges, UK net income reinvested, GBP. Benchmark data source: FactSet. Please note the fund performance is quoted net of fees while the index return is quoted gross and contains no adjustment for fees.

**abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

abrdrn American Income Equity Fund (closed)

Continued

The fund gained but underperformed the market over the review period due to both sector allocation and stock selection. Sector-wise, the communication services and healthcare sectors were key detractors from relative performance. Conversely, the consumer discretionary and utilities sectors were favourable.

At the stock level, the fund's lack of exposure to both Alphabet and NVIDIA Corporation weighed on performance, as their share prices increased over the period. The fund does not hold either of these companies, both of which pay only minimal dividends. Alphabet shares rose as investors gained confidence that artificial intelligence (AI) will have a positive impact on its core Google-search business, rather than pose a threat. Results showing a broad-based reacceleration in growth also helped sentiment. NVIDIA hurt performance as it outperformed on the back of better-than-expected sales growth and further upgrades to full-year expectations. CVS Health Corporation's shares were weak due to higher medical costs and a profit warning from pharmacy peer Walgreens, which pointed to weaker consumer spending starting to affect the non-pharmacy parts of its stores. Accenture's shares underperformed due to disappointing performance in the first quarter and weaker-than-expected guidance for the fiscal year to August, as large deals continued to take longer to come through given the current backdrop.

Conversely, beverage company Keurig Dr Pepper demonstrated a host of innovations in coffee brewers at an investor day in late March. It also reported stronger-than-expected first-quarter results in April that showed progress on its efforts to turn around the coffee business. NextEra Energy, the largest renewable energy developer and operator in the world, performed strongly on the back of rising expectations for US electricity consumption as a result of the increase in AI workloads and data centre demand. The fund benefited on a relative basis from not holding Tesla. It was feared that first-quarter deliveries could disappoint due to weak electric-vehicle demand and slower production in both North America and Europe. These numbers, released in early April, did indeed fall short. Genuine Parts Company shares reacted positively to its first-quarter earnings release in April, rising significantly on the day of the report. The company experienced a rebound in US automotive comparable sales compared to the prior quarter, well ahead of consensus expectations, and indicated continued improvement throughout the year.

Market Review

US share prices, as measured by the broad S&P 500 Index, rose strongly in sterling terms over the six-month period.

Growth-focused stocks, such as technology companies, continued to perform well. These stocks are especially sensitive to the end of monetary tightening and the prospect of rate cuts due to the favourable effect on their future discounted earnings.

Faced with a relatively robust economy, the US Federal Reserve continued to maintain a restrictive policy stance. The target range for the fed funds rate is currently at 5.25–5.50%, the highest level since 2001. However, a sustained fall in annual inflation and some mixed US economic data mean that investors are now anticipating several interest-rate cuts before the end of the year.

US stock markets rose steadily over most of the period. Once again, there was a good performance from the technology sector, especially AI-related stocks, such as NVIDIA, Microsoft and Alphabet. Equities performed well in March as encouraging inflation trends led to optimism about future interest-rate cuts. However, equities then weakened in April as higher-than-expected inflation over the first quarter of the year led to renewed fears of interest rates staying higher for longer. Equities rebounded in May and June, though, due to fresh hopes of interest-rate cuts by the end of the year, as well as better-than-expected corporate earnings. After fears of a US recession caused a sell-off in equities from mid-July to the start of August, they then rebounded to recover their losses before the end of the period.

Portfolio Activity and Review

The fund was closed on 14 May 2024, resulting in the liquidation of all its holdings.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
←				→		
1	2	3	4	5	6	7

Risk and reward indicator table as at 14 May 2024.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- Equity Risk - The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Concentration Risk - A concentrated portfolio (whether by number of holdings, geographic location or sector) may be more volatile and less liquid than a diversified one.
- Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A The fund was closed on 14 May 2024.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Asian Pacific Growth Equity Fund (closed)

For the six months ended 31 August 2024

abrdn Asian Pacific Growth Equity Fund is no longer open to investors, having redeemed all shares on 12 May 2023. It is the intention of the ACD to terminate the fund at a later date once the residual assets and liabilities are settled. As a result the financial statements for this fund has not been prepared on a going concern basis. At the time of the share cancellation, all realisable securities were sold.

abrdn UK Growth Equity Fund (closed)

For the six months ended 31 August 2024

abrdn UK Growth Equity Fund is no longer open to investors, having redeemed all shares on 3 March 2023. It is the intention of the ACD to terminate the fund at a later date once the residual assets and liabilities are settled. As a result the financial statements for this fund has not been prepared on a going concern basis. At the time of the share cancellation, all realisable securities were sold. One security which was not immediately realisable due to a trading suspension, or due to being delisted, continues to be held at the current balance sheet date. Should an opportunity to sell it for value arise, it will be sold, otherwise abrdn will, in conjunction with the Depositary, pursue any possible residual value from it until all such opportunities have been reasonably exhausted.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

ASI UK Recovery Equity Fund (closed)

For the six months ended 31 August 2024

ASI UK Recovery Equity Fund is no longer open to investors, having redeemed all shares on 22 October 2020. It is the intention of the ACD to terminate the fund at a later date once the residual assets and liabilities are settled. As a result the financial statements for this fund has not been prepared on a going concern basis. At the time of the share cancellation, all realisable securities were sold. One security which was not immediately realisable due to being delisted, continues to be held at the current balance sheet date. Should an opportunity to sell it for value arise, it will be sold, otherwise abrdn will, in conjunction with the Depositary, pursue any possible residual value from it until all such opportunities have been reasonably exhausted.

Global Emerging Markets Equity Unconstrained Fund (closed)

For the six months ended 31 August 2024

Global Emerging Markets Equity Unconstrained Fund is no longer open to investors, having redeemed all shares on 14 January 2016. It is the intention of the ACD to terminate the funds at a later date once the residual assets and liabilities are settled. As a result the financial statements for this fund has not been prepared on a going concern basis. At the time of the share cancellation, all realisable securities were sold. One security which was not immediately realisable due to being delisted, continues to be held at the current balance sheet date. Should an opportunity to sell it for value arise, it will be sold, otherwise abrdn will, in conjunction with the Depositary, pursue any possible residual value from it until all such opportunities have been reasonably exhausted.

Portfolio Statement

As at 31 August 2024

Holding	Investment	Market value £'000	Percentage of total net assets
Pacific Basin Equities (0.00%)		-	-
China (0.00%)		-	-
5,196,000	Tianhe Chemicals**	-	-
Total investment assets		-	-
Net other assets		-	-

Further Information

Constitution

abrdrn OEIC II was incorporated on 22 May 1998, under the FCA Regulations. The Company is an open-ended investment company (OEIC) with variable capital under regulation 14 (authorisation) of the OEIC Regulations.

Consumers' rights and protections, including any derived from EU legislation, are currently unaffected by the result of the UK referendum to leave the European Union and will remain unchanged unless and until the UK Government changes the applicable legislation.

Documentation and Prices

Copies of the current Prospectus and Key Investor Information Documents (KIIDs) for the abrdrn OEIC II, daily prices, together with the latest Annual (and if issued later the interim) Report and Accounts for any funds, are available to download at abrdrn.com. A paper copy of the Report and Accounts is available on request from the ACD.

Notices/Correspondence

Please send any notices to abrdrn Fund Managers Limited, PO Box 12233, Chelmsford, CM99 2EE. Any notice to the ACD will only be effective when actually received by the ACD. All notices will be sent to the investor at the address set out in the application form or the latest address which the investor has notified to the ACD, and will be deemed to have been received three days after posting. Events detailed in these terms and conditions will be carried out on the dates specified, unless the dates are a non-business day, when they will be carried out on the next business day.

Complaints and Compensation

If you need to complain about any aspect of our service, you should write to the Complaints Team, abrdrn, PO Box 12233, Chelmsford CM99 2EE, who will initiate our formal complaints procedure. If you prefer, you may call the Complaints Team on 0345 113 6966 or email complaints@abrdrn.com in the first instance.

Alternatively if you have a complaint about the Company or funds you can contact the Depositary directly. A leaflet detailing our complaints procedure is available on request. We will endeavour to respond to your complaint as soon as possible and will notify you of our outcome within 8 weeks. If the complaint is not resolved by us to your satisfaction then you may have the right to take your complaint to the Financial Ombudsman Service (FOS). To contact the FOS Service you should write to The Financial Ombudsman Service, Exchange Tower, London, E14 9SR, email complaint.info@financial-ombudsman.org.uk or telephone 0800 023 4567 (free for landlines and mobiles) or 0300 123 9123 (calls cost no more than calls to 01 and 02 numbers) or +44 20 7964 0500 (available from outside the UK – calls will be charged).

We are covered by the Financial Services Compensation Scheme, which means if we become insolvent, you may be entitled to compensation. The level of compensation will depend on the type of business and the circumstances of your claim. Investments are covered up to £85,000 for claims against firms that fail on or after 1 April 2019. Details are available from the FSCS Helpline on 0800 678 1100 or 020 7741 4100 and on the FSCS website: www.fscs.org.uk.

UCITS

The funds were certified under the Undertaking for Collective Investment in Transferable Securities (UCITS) directive, which allows the ACD to market the funds in member States of the European Union subject to relevant local laws, specifically marketing laws.
