REPORT OF THE AUTHORISED CORPORATE DIRECTOR

THE COMPANY

Franklin Templeton Funds (the "Company") is registered in the United Kingdom and is an authorised open-ended investment company with variable capital. It has an umbrella structure and as at 30 September 2024 offered shares in 22 Funds: FTF Brandywine Global Income Optimiser Fund, FTF ClearBridge Global Infrastructure Income Fund, FTF ClearBridge US Equity Income Fund, FTF ClearBridge US Value Fund, FTF Franklin Sterling Corporate Bond Fund, FTF Franklin UK Gilt Fund, FTF Franklin US Opportunities Fund, FTF Martin Currie Asia Unconstrained Fund, FTF Martin Currie Emerging Markets Fund, FTF Martin Currie European Unconstrained Fund, FTF Martin Currie Global Unconstrained Fund, FTF Martin Currie Japan Equity Fund, FTF Martin Currie UK Equity Income Fund, FTF Martin Currie UK Rising Dividends Fund, FTF Martin Currie UK Smaller Companies Fund, FTF Martin Currie US Unconstrained Fund, FTF Royce US Smaller Companies Fund, FTF Templeton Global Total Return Bond Fund and FTF Templeton Global Leaders Fund. Franklin Mutual Shares Fund, FTF Martin Currie UK Opportunities Fund and FTF Western Asset Global Multi Strategy Bond Fund are no longer available for investment.

The Company's registered number is SI000002 and the address of its Head Office is Cannon Place, 78 Cannon Street, London, EC4N 6HL.

Under the Open-Ended Investment Companies Regulations 2001 (the "OEIC Regulations"), each Fund is a segregated portfolio of assets and those assets can only be used to meet the liabilities of, or claims against, that Fund. Whilst the provisions of the OEIC Regulations provide for segregated liability between Funds, the concept of segregated liability is relatively new. Accordingly, where claims are brought by local creditors in foreign courts or under foreign law contracts, it is not yet known whether a foreign court would give effect to the segregated liability and cross-investment provisions contained in regulations 11A and 11B of the OEIC Regulations. Therefore, it is not possible to be certain that the assets of a Fund will always be completely insulated from the liabilities of another Fund of the Company in every circumstance. Shareholders are not however liable for the debts of the Company. A Shareholder is not obliged to make any further payment to the Company after paying the purchase price of the Shares.

Franklin Templeton Fund Management Limited, the Authorised Corporate Director ("ACD"), is authorised and regulated by the Financial Conduct Authority ("FCA"). The ACD may authorise the creation of additional Funds in the future with different investment objectives, subject to amendment of the Prospectus and FCA approval. The ACD's principal activity is investment management.

This Interim Report includes statements which show the financial positions of each Fund. Separate investment reviews are provided for each Fund.

The investment objectives and policies of each Fund can be found within each respective Fund's report.

ASSESSMENT OF VALUE

The FCA has recently introduced rules that requires authorised fund managers to assess the overall value that their Funds deliver to investors and to publish a summary of these assessments annually. The ACD's most recent assessment of the Funds and a summary of the findings is available on our website:

https://www.franklintempleton.co.uk/resources-and-literature/literature/assessment-of-value

The reference date of the Assessment of Value is 31 March 2024.

CROSS HOLDINGS

No Funds had holdings in any other Funds of the Company at the end of the reporting period.

DIRECTORS OF THE ACD

Nigel Anderson Andrew Ashton (Appointed 25 September 2024) David Brigstocke (Independent Director) Fionnuala Doris (Independent Director) William Jackson (Non-Executive Director) Penelope Kyle Gwen Shaneyfelt Euan Wilson

REPORT OF THE AUTHORISED CORPORATE DIRECTOR (Continued)

TASK FORCE ON CLIMATE-RELATED FINANCIAL DISCLOSURES (TCFD)

Under the rules of the FCA, Franklin Templeton Fund Management Limited has published public Task Force on Climate Related Financial Disclosures ("TCFD") product-level (fund-level) reports so that investors may have a better understanding of the climate-related risks and opportunities associated with each Fund and its underlying holdings. These Reports are published in line with the requirements of the FCA and TCFD.

The individual TCFD Product Reports can be viewed on https://www.franklintempleton.co.uk/tcfd

PROSPECTUS UPDATES SINCE 1 APRIL 2024

On 14 June 2024, the FTF Western Asset Global Multi Strategy Bond Fund closed.

On 28 June 2024, various changes were made to a number of Funds including changes to investment objectives to simplify them and a reduction in the annual management charge in respect of the S and W shares of the FTF Martin Currie UK Managers' Focus Fund. Please refer to the letter dated 28 May 2024 that can be found at http://www.franklintempleton.co.uk/ftfdocuments in the 'Additional Documents' tab for further details.

On 26 July 2024, FTF Martin Currie UK Opportunities Fund merged into the FTF Martin Currie UK Rising Dividends Fund.

On 1 August 2024, the annual management charge in respect of the W shares of the FTF Martin Currie Japan Equity Fund reduced.

On 1 August 2024, Martyn Gilbey resigned as a director of Franklin Templeton Fund Management Limited.

On 1 August 2024, a correction of a typographical error in the name of the performance comparator of the FTF Brandywine Global Income Optimiser Fund was made.

On 6 September 2024, Henrietta Jowitt resigned as a director of Franklin Templeton Fund Management Limited.

On 30 September 2024, various changes were made to reflect that (i) retail investors may only purchase shares in the Funds via an investment platform or if they are using the services of a Franklin Templeton approved independent financial adviser and (ii) the regular savings plan for all types of investors ceased being offered.

On 30 September 2024, minor changes were made to refresh the section entitled 'The Depositary'.

On 30 September 2024, a clarification was made to ensure it was clear that cash distributions are made in respect of income shares unless a shareholder has chosen to reinvest income distributions in their chosen share class.

On 30 September 2024, a clarification to the section entitled 'Client Money' was made.

On 30 September 2024, the address for providing complaints was updated together with the registered address for Martin Currie Investment Management Limited.

Performance and dilution figures (including the estimated dilution range) were refreshed, where appropriate.

The list of sub-custodians was refreshed, where appropriate.

The list of eligible markets was refreshed, where appropriate.

ACD's APPROVAL

This Interim Report has been approved by the ACD for issue to Shareholders and has been signed in accordance with the requirements of the FCA's Collective Investment Schemes Sourcebook ("COLL").

Director, Franklin Templeton Fund Management Limited, Authorised Corporate Director 28 November 2024

STATEMENT OF AUTHORISED CORPORATE DIRECTOR'S RESPONSIBILITIES

The Open-Ended Investment Companies Regulations 2001 and COLL require the Authorised Corporate Director to prepare financial statements for each accounting period which give a true and fair view of the financial position of the Company and of net income/expenditure and the net gains/losses on the property of the Company for the period. In preparing the financial statements the Authorised Corporate Director is required to:

- select suitable accounting policies and then apply them consistently;
- make adjustments and estimates that are reasonable and prudent;
- conform with the disclosure requirements of the Statement of Recommended Practice of Authorised Funds issued by the Investment Management Association in May 2014;
- comply with the disclosure requirements of the Prospectus and Instrument of Incorporation;
- follow generally accepted accounting principles and applicable accounting standards;
- prepare the financial statements on a going concern basis unless it is inappropriate to presume that the Company will continue in business;
- keep proper accounting records which enable it to demonstrate that the financial statements, as prepared, comply with the above requirements; and
- take reasonable steps for the prevention and detection of fraud and non-compliance with law or regulations.

The Authorised Corporate Director is responsible for the management of the Company in accordance with its Prospectus.

In accordance with rules of the Financial Conduct Authority, the Authorised Corporate Director has performed a detailed assessment of whether the Funds provide value to investors. The outcome of this assessment is included in a separate composite report which is published on our website at www.franklintempleton.co.uk.

ACCOUNTING POLICIES

The Interim financial statements have been prepared in accordance with FRS102 as modified by the Statement of Recommended Practice for Authorised Funds issued by the Investment Management Association in May 2014.

The Statement of Recommended Practice for Authorised Funds (SORP) was updated by the Investment Management Association in May 2014 with limited scope amendments issued in June 2017. Therefore, this Interim report has been prepared in the line with the latest SORP.

All accounting policies used to prepare the Interim financial statements are as per the audited financial statements for the year ended 31 March 2024.

Franklin Mutual Shares Fund is no longer available for investment. FTF Western Asset Global Multi Strategy Bond Fund was no longer available for investment as of 12 noon on 13 June 2024. As of noon 26 July 2024, FTF Martin Currie UK Opportunities Fund was no longer available for investment following its merger into FTF Martin Currie UK Rising Dividends Fund. As such, the financial statements of these three Funds have been prepared on a basis other than going concern. No adjustments were required to the financial statements of the Funds to adjust assets or liabilities to their realisable values, reclassify fixed assets and long-term liabilities as current assets and liabilities or to provide for liabilities arising from the decision.

All other Funds have been prepared on a going concern basis.

INVESTMENT OBJECTIVE & POLICY (no longer available for investment)

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund's primary objective is long-term capital appreciation by investing primarily in US equity and related debt securities. Income generation is a secondary consideration.

The Fund will pursue these objectives primarily through investment in equity and debt securities of US corporate issuers that are listed or traded on Eligible Markets which the Investment Manager believes are available at market prices less than their value based on certain recognised or objective criteria ("intrinsic value"). A significant portion of the debt securities in which the Fund invests is expected to be Sub-Investment Grade debt or equivalent unrated securities.

Following this value-orientated strategy, the Fund primarily invests in:

Undervalued equities – common and preferred stock, and securities convertible into common or preferred stock, trading at a
discount to intrinsic value;

to a lesser extent, the Fund also invests in:

- Merger arbitrage and companies undergoing restructuring equity and debt securities of companies that are involved in restructurings such as mergers, acquisitions, consolidations, liquidations, spin-offs, or tender or exchange offers; and
- Distressed securities debt securities of companies that are, or are about to be, involved in reorganisations, financial restructurings, or bankruptcy.

The Fund's investments in distressed companies typically involve the purchase of lower-rated (or comparable unrated) or defaulted debt securities or other indebtedness, such as syndicated bank debt, of such companies. The Fund generally invests in such debt instruments to achieve capital appreciation, rather than to seek income. Such investments may be made when the Investment Manager determines that such securities might be subject to an exchange offer or a plan of reorganisation pursuant to which Shareholders of the distressed securities could receive securities or assets in exchange for such securities. Generally, the Fund will invest in such securities at a price which represents a significant discount from the principal amount due at maturity. Investments by the Fund in distressed or defaulted debt securities shall be considered to be investments in securities which are not traded on Eligible Markets and shall therefore be subject to the restriction that such investments, together with other investments which fall into this category, may not exceed 10% of the net asset value of the Fund.

The Investment Manager employs a research-driven fundamental value strategy for the Fund. In choosing equity investments, the Investment Manager focuses on the market price of a company's securities relative to the Investment Manager's own evaluation of the company's asset value, including an analysis of book value, cash flow potential, long term earnings, and multiples of earnings of comparable securities of both public and private companies. Value stock prices are considered "cheap" relative to the company's perceived value and are often out of favour with other investors. The prices of debt obligations of distressed companies also may be "cheap" relative to the value of the company's assets. The Fund invests in such securities if the Investment Manager believes the market may have over-reacted to adverse developments or failed to appreciate positive changes. The Investment Manager examines each investment separately and there are no set criteria as to specific value parameters, asset size, earnings or industry type. A portion of the assets of the Fund, which will generally be not more than 20% of its net asset value, may be invested in the securities of non-US issuers, including issuers in emerging markets.

The Fund will limit its investments in transferable securities which are not traded on one or more Eligible Markets to not more than 10% of its net asset value as of the time of investment.

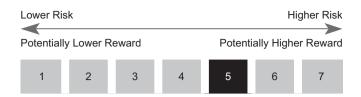

In addition, at the ACD's discretion, the Fund may also invest a proportion of its portfolio in other types of transferable securities including cash and near cash, money market instruments, and other collective investment schemes.

It is not currently intended that derivatives will be used for any purpose other than the efficient portfolio management (including hedging) of the Fund. However, the Fund may, in the future and subject to the ACD giving not less than 60 days' notice to shareholders in the Fund, use derivatives in pursuit of its investment objective as well as for efficient portfolio management. It is not intended that the use of derivatives for efficient portfolio management will cause the Fund's existing risk profile to rise. Where the use of derivatives in pursuit of the Fund's investment objective may cause the Fund to have higher volatility or otherwise cause its existing risk profile to rise, a notification to that effect shall be included within the 60-day prior notice to be sent to shareholders in the Fund.

INVESTMENT REVIEW

Franklin Mutual Shares Fund ceased trading on 31 January 2020.

RISK PROFILE (W Accumulation Shares)

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

PORTFOLIO OF INVESTMENTS As at 30 September 2024

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to generate income and preserve capital over periods of five years or more, after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least 80% of its assets in any of:

- Debt securities or bonds (a type of debt obligation) issued by governments, government-related or supranational organisations and corporations in any industry, anywhere in the world, including China. The Fund can invest more than 35% of its assets in bonds issued by any government of a country which is a member of the OECD.
- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation).
- Bonds whose value is secured by mortgages or other assets (mortgage or asset-backed securities).
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.
- Derivatives (investments whose value is linked to another investment or the performance of another variable factor, such as interest rates, currencies of any country or indices), including synthetic short positions (a technique where the Fund seeks to profit from decreases in value of securities, indices, currencies and/or index rates).

The Fund's principal asset class is the bonds and debt securities referred to above, and the 80% exposure may solely be to these investments, or may be to a combination of these investments with the collective investment schemes and derivatives referred to above.

The Fund may invest in bonds and debt securities which are Investment Grade as well as those which are not Investment Grade. Bonds and debt securities which are not Investment Grade generally pay a higher yield (interest rate) but are considered by rating agencies to be lower quality and carry more risk than Investment Grade bonds.

Other investments

The Fund may also invest in:

- Other transferable securities;
- · Cash and cash equivalents; and
- Money market instruments.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth), as well as for more speculative investment purposes, to help achieve the Fund's investment objectives.

At least 80% of the Fund's assets will be denominated in, or hedged back to, British Pounds (GBP).

Geographic locations (where we invest)

The Fund may invest anywhere in the world including emerging markets.

How we select investments (investment strategy)

- This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.
- In selecting investments, the Investment Manager seeks to select what it considers to be the most attractive assets, focusing on sectors which have an appropriate risk profile and high yields after inflation. The Investment Manager assesses macro-economic conditions alongside the investment case for specific issuers, including looking at a wide range of factors at the level of the relevant company, its sector, and the broader economy, with the aim of identifying the most attractive investment opportunities. This approach is intended to enable the Investment Manager to best identify potential anomalies in valuations at a company and sector level. The Investment Manager will invest across the global investment universe of the Fund, and will invest flexibly in sectors and in assets with varying durations and investment quality to achieve the Fund's investment objective.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

In selecting the majority of the Fund's investments, the Investment Manager assesses prospective investments against various ESG factors, to identify whether the issuer's ESG practices present a financial opportunity or risk. The Investment Manager focuses on environmental and social factors, for example:

- Environmental factors, such as deforestation and land usage, climate change vulnerability, greenhouse gas emissions and reliance on fossil fuel exports.
- Social factors, such as safety and environmental standards and breaches, product liabilities, breaches involving potential business risks, civil and political rights and private sector oversight and regulation.

Certain factors will be relevant to specific types of investment, depending on their features, for example government versus corporate bonds.

In addition to the integration of ESG factors described above, the Investment Manager also applies these factors to establish a scoring methodology based on external data sources which it uses to screen the universe of potential investments for the Fund. At least 90% of the issuers in the Fund's portfolio are assigned a score, and at least 80% of the Fund's investment universe is screened and scored.

Investments which are in the bottom 10% of the scoring system are automatically excluded from the Fund's portfolio. Ratings are reviewed quarterly for government debt securities, and daily for all other debt securities, and the Fund's managers will adjust the Fund within a month to exclude an issuer if a change in that issuer's score results in the bottom 10%. Investments in the bottom 10%-20% may be included in the Fund's portfolio, but the Investment Manager continually monitors these investments and will seek to engage with these issuers for improvement in environmental and social factors. If such improvement does not materialise in respect of corporate issuers, the Investment Manager may consider reducing or selling such investments.

The Fund will not invest in issuers that the Investment Manager considers have significant direct involvement in any of the following activities:

- Tobacco:
- Thermal coal;
- Nuclear energy; and
- · Adult entertainment materials.

The Fund will not invest in any issuer if the issuer:

- · Is assessed as 'fail' under the United Nations Global Compact; or
- Is a sovereign issuer identified in the United Nations Security Council Sanctions or as a high-risk jurisdiction by the Financial Action Task Force; or
- Is involved in the production, sales and distribution of controversial weapons, including nuclear weapons.

The Fund does not automatically exclude fossil fuels from the portfolio and such investments are subject to the above assessment criteria. Corporate issuers in the fossil fuel sector could therefore be included in the Fund's portfolio, if they score higher than the bottom 10% according to the Investment Manager's ESG scoring system.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Brandywine Global Income Optimiser Fund (W Accumulation) returned 2.76%, whilst its benchmark - the Bloomberg Multiverse Index (100% UK sterling Hedged) - returned 4.26% (both returns in UK sterling).

OVERVIEW

After a weak start over the first half of the reporting period, the global bond market rallied sharply and ultimately generated solid results during the six months ended September 30, 2024. Looking back, the global fixed income market experienced periods of volatility and declined during the second quarter. Interest rates rose in April, as inflation in the U.S. surprised on the upside, leading to expectations for the Federal Reserve (Fed) to keep rates "higher for longer." With the exception of Japan, rates then generally moved lower in May and June, but ended the quarter higher overall. On the economic front, growth in the U.S. remained resilient, as first quarter 2024 annualized gross domestic product (GDP) growth was 1.6%. First quarter GDP was less robust in the Eurozone and U.K., as their economies expanded 0.3% and 0.6% (quarter-over-quarter), respectively. In contrast, Japan's economy contracted an annualized 2.9%, versus a revised 0.1% annualized expansion over the fourth quarter of 2023. In terms of monetary policy, at its June meeting, Fed officials projected only one rate cut in 2024, versus expectations for three cuts at its March meeting. In contrast, in June the European Central Bank (ECB) cut rates for the first time since 2019 amid moderating inflation and tepid growth. Elsewhere, both the Bank of England and Bank of Japan (BoJ) held rates steady.

The global fixed income market rallied over the third quarter. U.S. second quarter 2024 annualized GDP growth was 3.0%. Inflation continued to move closer to the Fed's target. The August Core Personal Consumption Expenditures (PCE) Price Index—the central bank's preferred inflation gauge—increased 0.1% from July. Year-over-year, the core PCE rose 2.7%. Elsewhere, second quarter GDP in the Eurozone grew 0.2% quarter-over-quarter, while GDP expanded 0.5% and 0.7% in the U.K. and Japan, respectively. Turning to monetary policy, the Fed lowered rates in September for the first time since March 2020. The central bank opted for a more substantial 50 basis point (bp) cut given "...progress on inflation and the balance of risks." Meanwhile, the European Central Bank (ECB) lowered rates another 25 bps in September. The Bank of England (BoE) cut rates in August and was on hold at its September meeting. After raising rates in March and July, the Bank of Japan (BoJ) kept rates on hold at their September meeting.

In the currency market, the U.S. dollar gained 1.3% during the second quarter. The currency was supported by the Fed's cautious approach toward interest rate cuts and high carry relative to its G7 peers. The U.S. dollar then fell throughout the third quarter, returning -4.8%. The greenback was weak given the Fed's 50 bps rate cut, some softer-than-expected economic data, and moderating inflation. For the six-month period ended the U.S. dollar returned -3.5%. Meanwhile, the euro and pound gained 3.3% and 6.2%, respectively, against the U.S. dollar, over the six-month period. Elsewhere, the Japanese yen was extremely volatile, falling sharply over the second quarter and recouping those losses over the third quarter, for a six-month return of 5.7%. The yen initially declined given the ultra-loose monetary policy, but then rallied sharply as the central bank raised rates.

All told, the Bloomberg Global Aggregate Bond Index returned 5.26% during the six months ended September 30, 2024. Investors who took on additional risk were rewarded over the reporting period. Global high-yield corporate bonds, as measured by the Bloomberg Global High Yield Index (USD hedged) returned 6.75%. Meanwhile, the JPMorgan Emerging Markets Bond Global Index returned 6.53%.

SIGNIFICANT CHANGES

During the reporting period, the Fund reduced its overall portfolio duration, notably by trimming an overweight position to U.K. gilts. We also exited our position in Spanish government bonds, as Spain showed signs of continued recovery and we chose to lock in gains. Additionally, we tactically increased U.S. Treasury duration after yields rose significantly in April, presenting a compelling valuation opportunity as higher yields made Treasuries more attractive.

The Fund increased its position in Egyptian T-bills due to their continued attractive yields and the relative stability of the Egyptian pound, supported by central bank interventions. Additionally, ongoing fiscal reforms have reduced the medium-term default risk, further enhancing the appeal of these bonds. Conversely, the Fund reduced its exposure to local currency Brazilian and Colombian bonds, as concerns around upcoming elections and fiscal policy led to increased downside volatility in these markets. Despite initially trimming its exposure to local Mexican bonds, the Fund added back to the position as valuations became more attractive and the country's political and macroeconomic conditions improved. The Fund tactically added a position in the Japanese yen over the period, as we believe the policy shift by the BoJ to raise interest rates should support the currency.

The Fund also rotated out of U.S. agency pass-through mortgage-backed securities and into short-dated U.S. corporate credit, particularly in higher-quality high-yield bonds. This shift focused on industries tied to commodities and select hard currency emerging market corporates. Strong global demand and limited net new supply have created a positive outlook for high-yield bonds through the rest of the year. While U.S. Treasuries remain tight, this does not outweigh the positive factors. Defaults have stabilized below historical averages, interest coverage is above average, and leverage ratios are modest.

INVESTMENT REVIEW (Continued)

POSITIVE/NEGATIVE CONTRIBUTORS

The top contributor to the Fund was U.S. high-yield corporate credit. In particular, the portfolio's financials, basic materials, and energy names outperformed. U.S. investment-grade corporate credit names were also accretive. The narrowing of spreads, declining interest rates, and solid investor demand supported credit markets. U.S. Treasury duration exposure also performed well over the six-month period. Specifically, U.S. Treasuries rallied strongly in the third quarter as the Fed cut rates given labor market cooling and a declining inflation backdrop. U.S. prime residential mortgage-backed securities (RMBS) exposure contributed as spreads narrowed. The Fund's overweight to the Japanese yen was also rewarded, as the currency was supported by the BoJ and benefited from a weakening U.S. dollar.

Within our emerging market exposures, hard currency Panamanian government bonds were accretive as was an allocation to Egyptian T-Bills. Select local currency sovereign exposures in Latin America detracted from returns, including to Mexico, Colombia, and Brazil. Concerns around local elections and fiscal policy resulted in downside volatility in these markets during the second quarter. However, these bounced back somewhat in the third quarter. The Fed's monetary easing and China's broad based stimulus program are expected to generate a cyclical uplift. This environment is favorable for emerging markets, particularly those sensitive to global growth, while a weaker U.S. dollar also enhances attractiveness.

OUTLOOK

In our view, with inflation falling and the Fed about to embark on a rate cutting cycle, the macro environment is generally favourable for bonds. Given recent relative U.S. growth outperformance, a U.S. economic soft landing seems like the most likely scenario. However, other developed market countries are seeing more of a relative growth slowdown. Although spreads are tight, higher starting yields offer a compelling total return opportunity, in the manager's opinion. Technical market factors and diminishing evidence of a pending recession are also constructive. We remain defensive, looking to take additional risk on an individual, idiosyncratic basis where opportunities arise. The high-yield market is fundamentally stronger, with higher credit quality. Meanwhile, defaults are currently below their long-term averages. While tight monetary policy may become more problematic for the economy over time, many high-yield issuers are intensely focused on improving credit quality and debt levels.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- * The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to generate income and increase in value through investment growth. Over periods of five years, the Fund seeks to achieve an average annual return of OECD G7 Inflation Index + 5.5%, before the deduction of all fees and costs.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund invests at least 80% of the Fund's assets in a diverse range of shares of companies listed on the stock exchanges of developed countries. Such companies will operate across a variety of infrastructure sub-sectors, which may include gas, electricity, water, toll-roads, airports, rail and communication.

Other investments

The Fund may also invest in:

- Recently issued shares of companies which are not yet listed but which are expected to be listed within 12 months of purchase;
- · Other transferable securities;
- · Cash and cash equivalents;
- Money market instruments: and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies). Up to 10% of the Fund may be invested in derivatives and recently issued securities.

While the Fund will normally be invested in accordance with the limits set out above, the Investment Manager has the freedom to invest outside of these limits, sometimes significantly, where the Investment Manager considers that, due to prevailing market conditions, it is in the interests of the Fund and its shareholders to do so.

Geographic locations (where we invest)

The Fund may invest in companies operating anywhere in the world.

Up to 20% of the Fund's assets may be invested in shares of companies, including depositary receipts (a type of listed security which enables investors to hold shares in foreign companies), issued by companies in emerging markets (countries whose economy and financial markets are still developing).

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund. The Fund usually invests in shares of around 30 – 60 companies, although the Investment Manager may invest in fewer or more companies where it considers this to be in the interests of the Fund.

The Investment Manager selects securities based on their potential return and risk characteristics and role in achieving the Fund's investment objective. The portfolio is not constrained by any market index. The Investment Manager seeks to select infrastructure and utility companies which operate under a regulatory regime, or concession arrangement which provides the Investment Manager with a predictable cash flow and minimum yield. In considering yield, the Investment Manager looks at the dividend yield, the dividend per share expectations over a five year period, and the relationship of a company's dividends and cash flows, over an estimated holding period.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

The Investment Manager integrates financial and non-financial considerations in its assessment of a prospective investment. In selecting the Fund's investments, the Investment Manager assesses prospective investments against various ESG factors, depending on the sector of the investee company, for example:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions and energy efficiency initiatives.
- Social factors such as a company's approach to community relations, occupational health and safety and reliability and pricing of services.
- Governance factors such as the governance structure of the company, management incentives and the Fund's alignment with management, board and other shareholders of the company.

These ESG factors are used to inform the Investment Manager's wider assessment of the value and financial attractiveness of each potential investment and exposures are adjusted accordingly. In addition, the Investment Manager assesses an investment's ESG credentials both at the point of proposed investment and in terms of projected credentials in 5 years' time, allowing the Investment Manager to identify investments which are expected to improve ESG credentials over time. The Investment Manager also uses the results of these assessments to inform its strategy for engagement with companies included in the portfolio.

The Fund will not invest in:

- Companies that derive a significant amount of their revenues (10% or more) from the extraction or production of fossil fuels.
- Companies involved in the production, sale or distribution of dedicated and key components of anti-personnel mines and cluster munitions.
- Companies in the following non-infrastructure sectors: mining, explosives, alcohol and gambling.
- Companies that generate more than 5% of their revenues from tobacco.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF ClearBridge Global Infrastructure Income Fund (W Accumulation) returned 8.15%, whilst its two benchmarks - the OECD G7 CPI + 5.5% and FTSE Global Core Infrastructure 50/50 Index (GBP) - returned 4.80% and 8.24% respectively (all returns in UK sterling).

OVERVIEW

Infrastructure and equity markets rallied into the end of 2023, driven by a precipitous decline in interest rates as sustained disinflationary trends created an expectation that not only was the Federal Reserve ("Fed") finished raising rates, but rate cuts would also begin sooner and be more numerous than previously expected. Risk assets rose as the interest rate regime began to shift, with both infrastructure and global equities making strong gains.

These trends continued in the first quarter of 2024, as softening inflation and resilient economic growth spurred risk-on sentiment, and infrastructure assets trailed global equities amid a robust rally for equities. Defensive asset classes such as infrastructure outperformed equities in March, however, as cyclical sectors such as energy infrastructure did well and utilities began to get some credit for some of their long-term drivers, such as surging demand for electricity from artificial intelligence ("Al")-powering data centers.

Infrastructure and global equities continued to make gains in the second quarter of 2024, with infrastructure trailing global equities modestly as strength in defensive sectors faded late in the quarter, despite a moderation in bond yields. Overall, as investors began to appreciate the growing power demand from data centers supporting AI, this was positive for electric utilities. Energy infrastructure also benefited from an improving natural gas price outlook and growing acknowledgment that midstream infrastructure plays a key role to back up renewable power as AI demand grows. Airports were weaker, by contrast, amid lower summer traffic expectations for some European airports, while a mix of coal haulage, fuel headwinds and a loose truck market placing pressure on tariff increases for the rails weighed on that sector.

Listed infrastructure outpaced global equities in the third quarter of 2024 as a growth scare, coupled with high valuations for Al-related tech stocks, catalyzed a market rotation to a mixture of defensive, commodity- and rate-sensitive securities. Signs of slowing growth also raised hopes for an interest rate cut in the U.S., and the Fed delivered with a larger-than-expected 50 basis point cut to the federal-funds rate in September.

SIGNIFICANT CHANGES

We largely maintained our defensive positioning during the period, as we expected lagged impacts of tightened financial conditions to influence the economy and ultimately corporate earnings. While maintaining this overall positioning, also supported by our income objective and our greater emphasis on regulated and contracted utilities versus GDP-sensitive user-pays assets, due to the strong structural drivers of decarbonization, significant network investment, supply chain realignment and powering Al/data centers, we have pivoted toward high-growth regulated and contracted utilities with exposures to these themes.

POSITIVE/NEGATIVE CONTRIBUTORS

In absolute terms, the electric and gas utility sectors and communications were the main contributors over the period. By region, the U.S. and Canada as well as Western Europe were predominant. On an individual stock basis, U.S. electric utilities NextEra Energy, Entergy, Constellation and Southern Company and Italian electric utility Enel were the main contributors.

In absolute terms, the toll roads, rail and airports sectors were the main detractors. By region, the Latin America and Asia Pacific Developed detracted the most. On an individual stock basis, the main detractors were Brazilian toll road operator CCR, Brazilian electric utility Centrais Eletricas Bras, Japanese rail operator West Japan Railway, U.S. renewables company NextEra Energy Partners LP and French airport company Aeroports De Paris.

OUTLOOK

We continue to view infrastructure fundamentals as very strong — not only are inflation pass-throughs operating as expected, but there are also several strong long-term supportive themes, including decarbonization, significant network investment, supply chain realignment and powering Al/data centers. We are expecting bond volatility to reduce and market breadth to continue to broaden — as that occurs, we expect that the market will increasingly recognize the strong fundamentals and long-term themes of infrastructure.

Given the prospect of slowing growth from elevated levels, it's not surprising to see equity market volatility. In this environment, we believe infrastructure's defensive qualities and downside protection will become more apparent. In a slowing growth environment, we believe that this predictability of earnings makes regulated utilities (the bulk of the portfolio) attractive. Further, we continue to see positive earnings revisions for regulated and contracted utilities, based on that pass-through of inflation and on the growth in their underlying asset bases.

INVESTMENT REVIEW (Continued)

In terms of positioning, we maintain greater exposure to regulated and contracted utilities and continue to pivot toward high growth utilities. These are utilities with exposures to the strong themes of infrastructure and a significant backlog of projects that will drive their asset base growth, and in turn, earnings growth for shareholders. These high-growth utilities also have the added benefit of having a high likelihood of upside earnings surprises.

While market breadth has improved since the start of the year, with the Strategy outperforming global equities since the end of February, we still don't think the strong drivers of infrastructure are getting sufficient recognition by the market and believe it is only a matter of time before the fundamentals start to be increasingly reflected in market pricing.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- 7 The "closing net asset value per share" figure is based on the bid-market prices at close of business, whilst the highest/lowest share prices are based on mid dealing prices (the price at which shares are sold).
- [^] US Dollar/Sterling exchange rate at close of business 31 March 2023 1.23755 US Dollar/Sterling exchange rate at close of business 31 March 2024 - 1.26325 US Dollar/Sterling exchange rate at close of business 30 September 2024 - 1.34135
- * The Fund launched on 16 September 2022. The opening net asset value per share is calculated from the merger price. The Highest/Lowest share price is derived from the published NAV.
- ** This share class launched on 13 March 2023.
- *** This share class launched on 19 July 2023.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to generate income and increase in value through investment growth, over periods of five years or more, after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund invests at least 70% of its assets in shares of US companies.

Other investments

The Fund may also invest in:

- Preference securities (shares where dividends are paid out in advance of dividends due to other shares in the company);
- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation);
- Debt securities of any quality;
- Cash and cash equivalents;
- · Money-market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

Although the Investment Manager does not typically expect to use derivatives on a regular basis, the Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset, e.g. indices, interest rates, share prices or currencies.

Geographic locations (where we invest)

The Fund focuses on investments in the US. No more than 20% of the Fund's assets can be invested in investments issued by non-US companies.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund typically invests in shares of around 40-60 companies of any sector or industry. The Investment Manager seeks to select investments in companies which it believes may maintain or increase dividends or income distributions over the longer term. In particular, the Investment Manager seeks to select companies which it believes are undervalued (whether in respect of assets or earning power) by the rest of the market. Typically, the Investment Manager seeks to invest in companies with a market capitalisation of US\$ 10 billion or above, although the Investment Manager has the flexibility to invest in companies with a smaller market capitalisation if considered appropriate.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses each investee company against various ESG factors, depending on the sector of the investee company, for example:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

These ESG factors are used to inform the Investment Manager's wider assessment of the value and financial attractiveness of each potential investment, and exposures are adjusted accordingly. The Investment Manager also uses the results of these assessments to inform its strategy for engagement with companies included in the portfolio.

INVESTMENT OBJECTIVE & POLICY (Continued)

The Fund will not invest in:

- Companies involved in the production, sale or distribution of dedicated and key components of antipersonnel mines and cluster munitions; or
- Companies that generate 5% or more of their revenues from tobacco.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF ClearBridge US Equity Income Fund (W Accumulation) returned 1.36%, whilst its benchmark - the S&P 500 Index - returned 3.99% (both returns in UK sterling).

OVERVIEW

Equities rose during the period, spurred by the increasing likelihood of a soft landing for the U.S. economy as inflation declined and employment and consumer spending, while wavering at times, remained solid overall. Market leadership early in the period remained concentrated in a group of mega cap growth stocks that have come to be known as the Magnificent Seven. Most of these companies' stock prices were supported by enthusiasm over artificial intelligence (AI) technologies and their potential for rapid adoption across the economy.

In the third quarter of 2024, a growth scare, coupled with high valuations for Al-related tech stocks, catalyzed a market rotation to a mixture of defensive, commodity and rate-sensitive securities. Signs of slowing growth also raised hopes for an interest rate cut in the U.S., and the Federal Reserve delivered with a larger-than-expected 50 basis point cut to the federal-funds rate in September.

SIGNIFICANT CHANGES

Alphabet's initiation of a dividend in the quarter enabled us to take a small position. We see further meaningful revenue opportunities from Al innovations across its segments and may look to increase our holdings over time. Alphabet's exceptional balance sheet and improving cost efficiencies further solidify its strong position and growth prospects, and we expect its dividend will grow sharply over time.

The recent addition of Alphabet and Meta reflect the benefits of our flexible dividend approach. Our active (as opposed to formulaic) approach to dividends enabled us to move quickly and buy the shares soon after each announced its dividend. Over the years, our nimble approach to dividend investing has frequently enabled us to profit from long-term investments in high-growth technology companies that many passive or formulaic dividend investors likely missed.

Intel, meanwhile, continued to struggle, reporting results and giving profitability guidance materially below consensus. While we are intrigued by its efforts to regain its one-time leadership in semiconductor manufacturing, Intel's turnaround is taking longer than we had hoped, and with the suspension of its dividend beginning in the fourth quarter, we elected to exit our position and seek better opportunities elsewhere.

POSITIVE/NEGATIVE CONTRIBUTORS

Stock selection in the energy and real estate sectors and a utilities overweight were the most beneficial to relative performance. The leading individual contributors were Oracle, Broadcom, Apple, T-Mobile and Williams Companies.

Overweights to energy and materials and an underweight to IT, as well as stock selection in the communication services, financials, consumer staples, utilities and materials sectors weighed the most on relative results. The main detractors from performance during the reporting period were Intel, Merck, Vulcan Materials, Walt Disney and Comcast.

OUTLOOK

While the Federal Reserve was slow to respond to inflation in 2021 and 2022, they ultimately moved aggressively and brought inflation to heel. They have done this without triggering a recession and it seems the economy is headed for a soft landing. China has recently taken significant steps to juice its economy, and that too should help to put a floor under the global outlook.

The U.S. election is a month away, and it will clearly be consequential for the economy and society. At this point, it is a toss-up. While the two candidates represent very different approaches, we do not see obvious ways for equity investors to position themselves ahead of the election.

We like our portfolio and are optimistic about our positioning. While high-quality dividend growers have done well over the long term, they have lagged the S&P 500 over the last 18 months due to the index's intense concentration in a handful of technology names which have benefited from AI enthusiasm. With trillions of dollars of AI expectations now embedded in these securities, these winners are more expensive and offer less upside. Recent concentration has caused our differentiated portfolio to currently trade at meaningful discount to the broader market.

The significant decline in long-term interest rates increases the relative attractiveness of the yields available in our high-quality dividend payers. Investors began to gravitate back toward such stocks in the third quarter, and we suspect we will see more of that.

Peter Vanderlee, CFA, Michael Clarfled, CFA & John Baldi Fund Managers 30 September 2024

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- * The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

^{**} This share class launched on 22 January 2024.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund invests at least 80% of its assets in shares of US companies and debt securities or bonds (a type of debt obligation) issued by US companies. Typically, the Investment Manager seeks to invest in companies with a market capitalisation of US\$ 5 billion or above, although the Investment Manager has the flexibility to invest in companies with a smaller market capitalisation if considered appropriate.

At least 50% of the Fund's assets will be shares of companies (equity).

Other investments

The Fund may also invest in:

- Other transferable securities, including those issued by non-US issuers;
- Warrants (a type of security which offers the right to purchase certain securities at a fixed price) up to 5% of the Fund's portfolio;
- Cash and cash equivalents;
- · Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset, e.g. indices, interest rates, share prices or currencies. Use of derivatives is typically expected to be limited.

Geographic locations (where we invest)

The Fund focuses on investments in the US. No more than 20% of the Fund's assets can be invested in investments issued by non-US companies.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund typically invests in investments issued by around 40-70 companies. The Investment Manager takes a long-term approach to investment. The Investment Manager selects investments in companies which it believes are undervalued by the rest of the market, and therefore seeks to purchase securities at discounts to the Investment Manager's assessment of a company's intrinsic value. Intrinsic value in this case is the value of the company measured on factors such as, but not limited to:

- The discounted value of its projected future free cash flows;
- The company's ability to earn returns on capital in excess of its cost of capital;
- Private market values of similar companies; and
- The costs to replicate the business.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses each investee company against various ESG factors, depending on the sector of the investee company, for example:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

These ESG factors are used to inform the Investment Manager's wider assessment of the value and financial attractiveness of each potential investment and exposures are adjusted accordingly. The Investment Manager also uses the results of these assessments to inform its strategy for engagement with companies included in the portfolio.

The Fund will not invest in:

- Companies involved in the production, sale or distribution of dedicated and key components of antipersonnel mines and cluster munitions; and
- Companies that generate 5% or more of their revenues from tobacco.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF ClearBridge US Value Fund (W Accumulation) returned -0.32%, whilst its benchmark - the Russell 1000 Value - returned 0.83% (both returns in UK sterling).

OVERVIEW

Equities rose during the period, spurred by the increasing likelihood of a soft landing for the U.S. economy as inflation declined and employment and consumer spending, while wavering at times, remained solid overall. Market leadership early in the period remained concentrated in a group of mega cap growth stocks that have come to be known as the Magnificent Seven. Most of these companies' stock prices were supported by enthusiasm over artificial intelligence (AI) technologies and their potential for rapid adoption across the economy.

In the third quarter of 2024, a growth scare, coupled with high valuations for Al-related tech stocks, catalyzed a market rotation to a mixture of defensive, commodity- and rate-sensitive securities. Signs of slowing growth also raised hopes for an interest rate cut in the U.S., and the Federal Reserve delivered with a larger-than-expected 50 basis point cut to the federal-funds rate in September.

SIGNIFICANT CHANGES

We added several new positions during the period including UnitedHealth Group, a leading diversified health care company that offers health insurance through its UnitedHealthcare segment and health services through its Optum division. Despite the market's concerns surrounding rising competition within the Medicare Advantage (MA) market, we believe the company has a strong portfolio of more profitable MA plans than its competitors, and that its decision to not pursue unsustainable benefit plans over the last few years is paying off.

We also added Nestle, a Switzerland-based global packaged foods company, in the consumer staples sector, and part of our shift toward a greater defensive positioning. We believe a pullback in the share price created an attractive entry point for a company with broad geographical exposure to markets with resilient consumer spending, like Europe and emerging markets, and strong brands within untracked channels such as pet food and coffee. As a result, we believe the company has multiple opportunities to unlock value for shareholders and re-rate higher.

We also exited several positions during the period including United Parcel Service, in the industrials sector, which is a leading package delivery and logistics provider. The company continues to suffer from the headwinds of higher expenses and restrained shipping volume growth, and we no longer believe that management's guidance and expectations are realistic in such an environment. In our experience, management teams that stretch to make near-term guidance often end up creating both short- and long-term losses, and we elected to exit the position in favor of other opportunities.

In response to the volatility at the beginning of the third quarter, we made a number of adjustments to our portfolio positioning including raising our health care exposure by about 4% and sold down some of our power and cyclical stocks, specifically financials, that were subject to the most downside volatility.

POSITIVE/NEGATIVE CONTRIBUTORS

Stock selection in the utilities and materials sectors, as well as an overweight to the utilities sector proved beneficial to performance. The leading individual contributors were Vistra, GE Vernova, Constellation Energy, Oracle and Kellanova.

Stock selection in the financials, consumer staples, information technology (IT), consumer discretionary, energy and industrials sectors, an overweight to the energy sector and underweight to the IT sector weighed the most on relative results. The main detractors from performance during the reporting period were Atkore, Noble, Block, CVS Health and Conocophillips.

OUTLOOK

We can only capture very mispriced fundamental opportunities by venturing beyond the "safety" of historically expensive but lower-volatility indexes. This differentiated and active valuation discipline will inevitably result in some disappointing quarters like this last one, but we have the processes in place, that help us adapt, learn and continually improve. Most importantly, the advantaged valuation and fundamental characteristics of our portfolio are a continuously compounding advantage that makes the inevitable short-term turbulence worth navigating.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- * The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.
- ** This share class launched on 19 January 2024.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to generate income and increase in value through investment growth. Over periods of five years, the Fund seeks to achieve an average annual return greater than that of the Markit iBoxx GBP Non-Gilts Index, after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in corporate bonds (a type of debt security issued by a company) denominated in British Pounds (GBP).

Other investments

The Fund may also invest in:

- Bonds which are denominated in currencies other than GBP (up to 10% of the Fund's portfolio)
- · Cash and cash equivalents;
- Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). Derivatives are financial contracts whose value is linked to the price of another asset, e.g. indices, interest rates, share prices or currencies.

Geographic locations (where we invest)

The Fund can invest anywhere in the world.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund's assets will normally be held in investment grade securities (bonds from companies that have been rated by independent agencies as high quality); however, up to 15% of the Fund's assets can be held in bonds that are rated as below investment grade (below BBB- by Standard & Poor's or Baa3 by Moody's). These bonds generally pay a high yield (interest rate) but are considered by rating agencies to be lower quality and carry more risk than investment grade bonds. In addition, the Fund's managers make their own assessment of both investment grade and non-investment grade bonds to determine whether they believe investors will be adequately rewarded for any risk taken.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Franklin Sterling Corporate Bond Fund (W Accumulation) returned 2.14%, whilst its benchmark - the Markit iBoxx GBP Non Gilts Index - returned 2.15% (both returns in UK sterling).

OVERVIEW

UK corporate bond indexes registered positive returns over the period under review, outperforming their government counterparts.

Data released over the second quarter of 2024 showed that UK gross domestic product ("GDP") had expanded sequentially in the first quarter, after contracting for two consecutive quarters, indicating that the country had exited a technical recession. After contracting in April, UK manufacturing activity returned to growth in May and continued expanding in June, while an early report indicated services activity expanded in June for the eighth successive month. At its May and June meetings, the Bank of England ("BoE") left its key bank rate unchanged at the highest level in more than 16 years, and policymakers' comments that the decision was "finely balanced" led many observers to expect a possible rate cut in August.

UK manufacturing activity expanded in July for the third consecutive month, while services activity grew in July for the ninth successive month. In August, the BoE cut its key bank rate for the first time in more than four years, trimming it by 25 basis points. Policymakers indicated they will be cautious about further rate cuts until they are more confident that inflation is restrained. UK GDP grew sequentially in the second quarter at a slightly slower pace than in the prior quarter. However, the country's manufacturing activity expanded in August for the fourth consecutive month and at the fastest pace in more than two years, while an early report indicated its services activity expanded in August for the 10th month in succession. In September, The BoE left its key bank rate unchanged but indicated it might reduce the bank rate over the next few months as it expects inflation to move towards its target in late 2025. Meanwhile, the country's manufacturing activity expanded in September for the fifth month in a row, though at a slower pace than in the previous two months, while an early report indicated its services activity expanded for the 11th successive month.

SIGNIFICANT CHANGES

The fund made no purchases over the period.

Conversely, the top sales during the period were Metlife 5.375% 09/12/24, Pinewood 3.25% 30/09/25, Ford Motor Credit 5.625% 09/10/28 and Bazalgette Finance 2.375% 29/11/27.

POSITIVE/NEGATIVE CONTRIBUTORS

The fund's duration and yield curve positioning in UK bonds weighed on relative returns.

The fund's sector allocation and security selection contributed to relative performance, most of all an overweight exposure to corporate high-yield financial issues, although this was offset to some degree by the negative impact of selection in this area. Positioning in corporate investment-grade financial bonds also lifted relative results. Selection in corporate investment-grade utility and industrial issues, as well as government-related debt, also added relative value.

OUTLOOK

In our opinion, inflation should continue to abate over the medium term, although we will be mindful of the effect of salary increases by the new Labour government. After August's rate cut, we believe that the BoE will continue to lower rates but that the pace will be relatively slow and dependent not only on the path of inflation but also on the October budget. Against this backdrop, we feel that rate cuts do not need to be accommodative, only neutral, and we anticipate the cost of borrowing to stabilise somewhere in the region of 3.5%-4%.

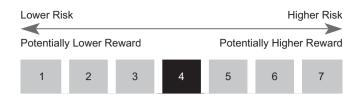

David Zahn, CFA & Rod MacPhee, CFA Fund Managers 30 September 2024

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to generate income and increase in value through investment growth. Over periods of five years, the Fund seeks to achieve an average annual return greater than that of the FTSE UK Gilts (All) Government Total Return Index, after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund invests at least two thirds (but typically significantly more) in debt securities or bonds issued by the United Kingdom Government that pay interest (Gilts).

Other investments

The Fund may also invest in:

- Bonds or debt securities issued by governments of any nation (up to 20% of the Fund's portfolio);
- · Bonds issued by government-related organisations;
- Bonds denominated in currencies other than British pounds (GBP) (up to 10% of the Fund's portfolio); and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). Derivatives are financial contracts whose value is linked to the price of another asset, e.g. indices, interest rates, share prices or currencies.

Geographic locations (where we invest)

The Fund's focus is the UK. The majority of the Fund's investments will be in bonds issued by the UK government, although the Investment Manager has discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

The Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund. The Investment Manager does not intend to invest in every security in the FTSE UK Gilts (All) Government Total Return Index.

All the investments will be in investment grade securities, (bonds that have been rated by independent agencies as high quality). In addition, the Investment Manager makes its own assessment of bonds to determine whether it believes investors will be adequately rewarded for any risk taken.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Franklin UK Gilt Fund (W Accumulation) returned 1.47%, whilst its benchmark - the FTSE UK Gilts (All) Government TR Index - returned 1.41% (both returns in UK sterling).

OVERVIEW

UK Gilts registered small positive returns over the period under review.

Data released over the second quarter of 2024 showed that UK gross domestic product ("GDP") had expanded sequentially in the first quarter, after contracting for two consecutive quarters, indicating that the country had exited a technical recession. After contracting in April, UK manufacturing activity returned to growth in May and continued expanding in June, while an early report indicated services activity expanded in June for the eighth successive month. At its May and June meetings, the Bank of England ("BoE") left its key bank rate unchanged at the highest level in more than 16 years, and policymakers' comments that the decision was "finely balanced" led many observers to expect a possible rate cut in August.

UK manufacturing activity expanded in July for the third consecutive month, while services activity grew in July for the ninth successive month. In August, the BoE cut its key bank rate for the first time in more than four years, trimming it by 25 basis points. Policymakers indicated they will be cautious about further rate cuts until they are more confident that inflation is restrained. UK GDP grew sequentially in the second quarter at a slightly slower pace than in the prior quarter. However, the country's manufacturing activity expanded in August for the fourth consecutive month and at the fastest pace in more than two years, while an early report indicated its services activity expanded in August for the 10th month in succession. In September, The BoE left its key bank rate unchanged but indicated it might reduce the bank rate over the next few months as it expects inflation to move towards its target in late 2025. Meanwhile, the country's manufacturing activity expanded in September for the fifth month in a row, though at a slower pace than in the previous two months, while an early report indicated its services activity expanded for the 11th successive month.

SIGNIFICANT CHANGES

The top purchases made by the Fund during the period were UK Treasury 4.125% 29/01/27, UK Treasury 5% 07/03/25, UK Treasury 4.25% 07/03/36, UK Treasury 4.75% 07/12/38 and UK Treasury 0.5% 31/01/29.

The top sales over the period under review were UK Treasury 1% 22/04/24, UK Treasury 3.5% 22/10/25, UK Treasury 4.25% 07/12/49, UK Treasury 5% 07/03/25 and UK Treasury 4.125% 29/01/27.

POSITIVE/NEGATIVE CONTRIBUTORS

The fund's duration and yield-curve positioning in UK bonds contributed to relative returns.

The fund's sector allocation and security selection detracted from relative performance, most of all an off-benchmark exposure to Treasury Inflation-Protected Securities, an underweight exposure to bonds of maturities between 15 and 25 years, and selection in bonds of maturities between 7.5 and 15 years.

OUTLOOK

In our opinion, inflation should continue to abate over the medium term, although we will be mindful of the effect of salary increases by the new Labour government. After August's rate cut, we believe that the BoE will continue to lower rates but that the pace will be relatively slow and dependent not only on the path of inflation but also on the October budget. Against this backdrop, we feel that rate cuts do not need to be accommodative, only neutral, and we anticipate the cost of borrowing to stabilise somewhere in the region of 3.5%-4%.

David Zahn, CFA & Rod MacPhee, CFA Fund Managers 30 September 2024

¹ The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".

² The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.

³ The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".

⁴ The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.

⁵ The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.

⁶ The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in the shares of companies of any size, listed on the United States' stock markets.

Other investments

The Fund may also invest in:

- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation);
- · Other types of transferable securities;
- · Cash and cash equivalents;
- Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographic location (where we invest)

The Fund's focus is the US. The majority of the Fund's investments will be in shares in companies listed in the US, although the Investment Manager has discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Investment Manager focuses on those stocks that it believes have the potential to grow faster than the US economy. Typically, these types of companies do not pay a dividend and instead reinvest any earnings to aid future growth. In assessing potential investments, the Investment Manager evaluates the companies for the above characteristics and assesses a company's value by looking at a wide range of financial and economic factors at the level of the relevant company, its sector and the broader economy (a fundamental approach). The Investment Manager may focus on sectors, such as technology, that have exceptional growth potential and fast-growing, innovative companies within these sectors.

Within each sector, the Investment Manager can invest in any industry but normally try to keep investment in any specific industry to no more than 25% of the portfolio.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses each investee company against various ESG factors, depending on the sector of the investee company, for example:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

INVESTMENT OBJECTIVE & POLICY (Continued)

These ESG factors are used to inform the Investment Manager's wider assessment of the value and financial attractiveness of each potential investment, and exposures are adjusted accordingly. The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned an ESG rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of AAA (best in class / very good), AA (good), A (fair), and B (needs improvement). Investments with an ESG rating of B (or those which are unrated because they have not met the financial criteria of the Investment Manager) will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness. The Investment Manager also uses the results of these assessments to inform its strategy for engagement with companies included in the portfolio.

The Fund will not invest in:

- Companies which generate more than 5% of revenue from the production of tobacco or tobacco related products.
- Companies which generate more than 10% of revenue from thermal coal extraction or coal based power generation.
- Companies which generate more than 10% of revenue from the production and/or distribution of weapons.
- Companies involved in the production, sale or distribution of dedicated and key components of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).
- Companies assessed by the Fund's managers as 'fail' under the UN Global Compact Principles.
- Companies which the Fund's managers consider do not meet standards on greenhouse gas emissions or board gender diversity.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Franklin US Opportunities Fund (W Accumulation) returned 1.86%, whilst its two benchmarks - the Russell 3000 Growth Index and S&P 500 Index - returned 5.21% and 4.22% respectively (both returns in UK sterling).

OVERVIEW

US equities collectively finished the six-month period with record-high performance, helped by encouraging data showing cooling inflation, resilient job growth and improved consumer sentiment. The US Federal Reserve's ("Fed's") robust interest-rate cut was another positive catalyst that drove stocks higher. Over the six months under review, growth stocks generally outpaced value stocks while large-cap stocks outperformed small- and mid-capitalisation equities despite a rotation away from large-cap technology-related stocks during the latter half of the period.

SIGNIFICANT CHANGES

For the six-month period ended 30 September 2024, the information technology ("IT") sector was the largest sector weighting in the fund, followed by health care, consumer discretionary and communication services. Relative to the benchmark, the fund was most overweight in the health care and industrials sectors and most underweight in the IT and consumer discretionary.

Top purchases over the period included Apple, Broadcom, Fair Isaac, Parker-Hannifin and D.R. Horton.

In the IT sector, we increased our position in Apple and are excited about the announcement of Apple Intelligence, a software overhaul that will bring artificial intelligence (AI) features across its products. We started a position in Broadcom, a leading semiconductor company exposed to generative AI end markets. We also increased our position in Fair Isaac Corporation ("FICO") in the IT sector. We believe credit scoring and data analytics companies like FICO are high-quality business models with favourable secular tailwinds from the growing demand for credit. In the industrials sector, we started a position in Parker-Hannifin, which specialises in motion and control technologies. Increasing automation in various industries and the adoption of robotics and industry 4.0 technologies should be tailwinds for growth, in our view. We purchased shares in D.R. Horton, a leading US entry-level homebuilder that, in our assessment, is well-positioned for the demographic tailwind of millennial first-time buyers. The company is pivoting to an asset-light strategy, which should drive stronger returns on inventory and profitability over time, in our view.

Leading positions that were reduced or exited during the reporting period included NVIDIA, Monster Beverage, ServiceNow, Amazon.com and Alphabet.

In the IT sector, we reduced our exposure to NVIDIA and ServiceNow following their strong stock performance powered by excitement for AI. In the consumer staples sector, we reduced our stake in Monster Beverage due to softening trends in the energy drink category. We trimmed our position in Amazon.com, whose stock reached an all-time high in July. We also reduced our position in Google-parent Alphabet on share-price strength over the period.

POSITIVE/NEGATIVE CONTRIBUTORS

The fund underperformed its benchmark index for the six-month reporting period ended 30 September 2024 due to negative stock selection and allocation effects.

The rotation into more cyclical and defensive aspects of the market was a drag on many growth-oriented sectors over the period. IT was the leading sector detractor from relative returns. Within the sector, the fund's much lighter-than-index stake in tech bellwether Apple detracted from relative performance. The tech giant's stock reached an all-time high in mid-July following the company's announcement of a software overhaul that will bring Al features across its products. Another detractor in the IT sector was chipmaker Lattice Semiconductor. The ongoing trade war between the United States and China disrupted business for Lattice, impacting its bottom line. In addition, the company's chief executive officer departed in June, which further pressured shares. Conversely, several holdings in the semiconductors industry were top contributors in the IT sector as Al continued to benefit many chipmakers, including Monolithic Power Systems and NVIDIA. An underweight in the poorly performing shares of Microsoft also enhanced relative returns. In the consumer discretionary sector, an underweight in Tesla (sold by period-end) detracted from relative returns as the shares of the electric car company rallied following the introduction of autonomous driving technology, which generated significant excitement among investors.

At the individual stock level, the health care sector was a source of both positive and negative relative performance. Helping relative returns was vaccine developer Vaxcyte, whose shares reached a record high after the company said its experimental pneumococcal vaccine showed promising results in an early-stage trial. Conversely, competitive headwinds in the continuous glucose monitor device market and a reduced sales guidance pressured the shares of Dexcom.

INVESTMENT REVIEW (Continued)

OUTLOOK

The Fed has shifted its focus from inflation to employment, helping to ensure the health of the US economy. We believe the monetary easing currently taking place can be a tailwind for financial markets for the rest of this year and arguably into 2025. US equity performance continues to be supported by generally strong earnings results and resilient consumers, which have helped to offset some impact from elevated interest rates. Market participation has recently broadened from the "Magnificent Seven" group of mega-cap technology-related companies to more diverse sectors and market-cap sizes. We believe this will be an interesting dynamic over the next year. We continue to see many of the secular growth themes such as digital transformation, health care innovation, and reindustrialisation and electrification in the industrials sector as tailwinds to broader economic growth.

While some data has shown a modest slowdown in the US economy, we are still forecasting growth to accelerate in the fourth quarter of 2024 and remain strong in 2025. However, stronger-than-expected growth may make the Fed more cautious about interest-rate cuts. We aim to navigate uncertainty by positioning the fund to potentially remain robust across various scenarios—both economic and political—and make necessary adjustments which, in our assessment, shouldn't compromise long-term performance.

- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund invests at least 80% of its assets in shares of companies (equities) and equity related securities that are:

- Listed or traded on markets located in any of mainland China, Hong Kong, India, Indonesia, Malaysia, Pakistan, Philippines, Singapore, South Korea, Taiwan, Thailand and Vietnam ("Primary Countries"); or
- Listed or traded on any other market, but which are issued by companies that have significant business operations in, or derive the majority of their business profits from, Primary Countries.

Equity-related securities includes:

- American and global depositary receipts (a type of listed security which enables investors to hold shares in foreign companies).
- Convertible bonds (a type of corporate debt security which can be exchanged for shares in the same organisation).
- Warrants (a type of tradeable contract which gives the right to buy a share at an agreed price within a certain timeframe).

Other investments

The Fund may also invest in:

- Cash and cash equivalents;
- · Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative investment use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies). Use of derivatives is typically expected to be limited.

Geographic location (where we invest)

The Fund has a focus on Asian investments, particularly in the "Primary Countries" listed above. Up to 20% of the Fund's portfolio could be invested outside of the Primary Countries.

How we select investments (investment strategy)

The Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund typically invests in 20 – 40 companies of any size or industry, and the portfolio is constructed without reference to any benchmark or index.

The Fund invests in companies which, in the opinion of the Investment Manager, may benefit from the potential growth of Asian economies and translate that growth into returns for shareholders. The Investment Manager will ordinarily focus on companies with a business franchise which it believes can grow in value, as measured by the company's free cash flow and retained earnings. The Investment Manager selects companies that it believes offer sustainable growth, strong management and a strategic market position. The Investment Manager focuses on companies which it considers are reasonably valued and which the Fund looks to hold over the long term.

In assessing potential investments, the Investment Manager has developed a method of valuing investments which is based on assessing the company's long term cash-generating ability. The Investment Manager undertakes due diligence on potential investments including a review of a company's historic financial records and its corporate governance.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness. Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in:

- Companies which generate more than 5% of revenue from tobacco production
- Companies which generate more than 5% of revenue from direct involvement in extraction of fossil fuels.
- Companies which generate revenue from mining of metals and minerals as defined by GICS sub-industries Diversified Metals and Mining, Copper, Gold and Precious Metals and Minerals.
- Companies involved in the production, sale or distribution of dedicated and key components of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).
- · Companies assessed as 'fail' under the UN Global Compact.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie Asia Unconstrained Fund (W Accumulation) returned 6.60%, whilst its benchmark - the MSCI AC Asia ex-Japan Index (Net) - returned 11.46% (both returns in UK sterling).

OVERVIEW

Asian equity markets registered an overall positive return and were up significantly for the 6-month period ending 30 September 2024. The markets witnessed bouts of volatility but ultimately rallied strongly toward the end of the period.

China, Singapore, Malaysia and Hong Kong were among the best performers in the period, while Indonesia and Korea saw the most severe declines. The most significant events driving these market moves were the Federal Reserve (Fed) policy rate cut of 50 basis points in September and the announcement of a string of monetary and fiscal support measures in China. While there had been some cuts to Asian policy rates in anticipation of the Fed cut, aside from the usual matching policy rate change by Hong Kong to maintain the HK dollar peg with the US dollar, there has been no widespread rate cutting in Asia outside of the policy measures announced in China. The strong performance the smaller ASEAN markets began just ahead of the Fed Chairman's Jackson Hole address and was driven by heightened expectations that the start of an easing cycle in US policy rates would be signaled. The subsequent rate cut in September was well received as a result.

Performance in China equities has been inconsistent, with a rally earlier in the period that was subsequently reversed, and then an even more powerful rally at period-end following the Fed rate cut and news of China's new macro support initiatives. The measures announced by China in September are significant and while they will have little impact on growth in the current year, they will help alleviate some of the downward pressure on the economy and may be a positive impetus for growth in 2025. The relative earnings ratio of next 12 months earnings forecasts for MSCI China and the MSCI Asia ex Japan Index has deteriorated in each of the past 15 months and as a result has become a trend deeply embedded in the mindset of investors. A significant government policy change that might alter the trajectory of this trend is therefore a potentially powerful catalyst for market participants to reassess their positioning. We have seen just that since mid-September in Chinese equities. Self-help measures by large Chinese companies to improve shareholder returns, including cost reduction efforts and value-creating capital management initiatives (such as buying back shares at market valuations well below their intrinsic worth), have been largely ignored by investors in hot pursuit of earnings growth in other markets such as India and some US 'mega-cap' growth stocks. Chinese stocks had sunk to low valuations by the time that China announced its raft of monetary policy measures. Given how unloved they were, it is not surprising that Chinese share prices responded so vigorously.

Indonesian stocks have been under pressure through most of the period, impacted by currency weakness versus the US dollar, as well as the central bank announcing a surprise policy rate increase (in April). The market continued to experience selling pressure amidst concerns that the weaker currency versus the US dollar could force the central bank into being more restrictive than domestic economic conditions might otherwise merit, hampering growth prospects at a time when earnings growth in the country has already slowed relative to the rest of the region.

Weakness in Korea was driven by poor returns from the technology sector and to a lesser extent the automotive sector. Semiconductor and hardware & equipment stocks declined significantly, driven by two factors: (1) a loss in momentum of stocks seen as beneficiaries of the AI theme, and (2) a sell-off in semiconductor stocks partly due to (1) but also due to news that prices of some classes of memory semiconductor chips were weaker amid evidence of involuntary inventory accumulation in certain demand verticals (such as at PC and smartphone set makers).

From a sector perspective, information technology stocks were among the strongest in the first half of the period. However, there were signs of broadening out of returns in the latter half, with the beginning of a rotation out of technology stocks into market segments that had fallen by the wayside. Overall, materials, energy and technology were the weakest performing sectors in the period, while consumer discretionary and communication services were strongest.

SIGNIFICANT CHANGES

At the end of the reporting period, in sector terms the largest absolute weights were to Information Technology, Consumer Discretionary and Financials. Geographically, China remains the largest weighting followed by Taiwan and Singapore. New purchases over the period: Classys Inc (a leading producer of medical aesthetics devices), Infosys (an Indian software services company), Shinhan Financial Group (one of the largest Korean banking groups) and Wiwynn Corp (a cloud infrastructure provider). We made four exits from the portfolio: ASMPT, Hansol Chemical, LG Chem and PT Telkom Indonesia.

In addition to the new purchases and sales there were additions and trims to certain existing holdings. Additions included Alibaba, Accton Technology, Hygeia Healthcare and Sumber Alfaria Trijaya. Trims included Techtronic Industries, Singapore Technologies Engineering and Singapore Telecommunications.

INVESTMENT REVIEW (Continued)

POSITIVE/NEGATIVE CONTRIBUTORS

The biggest absolute contribution from a country/regional perspective came from China, while sector wise, communication services was the strongest. At a stock level, Tencent, Singapore Telecommunications and China Resources MixC were notable positive contributors to performance.

Holdings in Korea were a drag on performance and information technology was the weakest performing sector. Within the portfolio, notable detractors from performance included Samsung Electronics, Hansol Chemical and Wiwynn Corp.

OUTLOOK

As discussed above, the most significant events affecting Asia stocks during the review period were undoubtedly the Fed 50bp policy rate cut and China's new support measures. The aim of the latter might be to inject new life into the economy, but the focus of those announced so far are more focused on addressing present maladies, rather than being reform-led, structural growth initiatives.

The rally in Chinese stocks has taken them back to long-term average valuations, using the MSCI China as a proxy, and has eliminated the extreme undervaluation of the past 12-18 months. While there could be further upside from here as additional support measures emerge, it is hard to argue based on current information that the investment case for China today is sufficiently compelling, in absolute terms, to merit a more dramatic rerating from here. However, more substantial fiscal measures or far-reaching structural reform steps could change that.

Just as we are embarking on a perhaps more positive path in China, recent macro data in India suggests that economy is going through a softer growth patch. The index of industrial production in India recently hit its lowest level for almost two years, while some consumer-facing companies have reported disappointing business results. The long-term outlook for India continues to be one of the most attractive in the region (economists expect 6-7% GDP growth in the medium term). However, in the short-term at least the earnings picture is less compelling relative to the rest of the region – Indian corporate earnings (using forecast next twelve-month (NTM) earnings for the MSCI India) have outperformed broader Asia ex Japan forecast earnings since the summer of 2020, but this trend peaked in May 2024 while relative to China, the trend peaked one month later. This could be problematic given Indian stocks trade at lofty valuation premiums to the rest of the region and Indian equities are a key "overweight" for many institutional investors in the region.

While over the past 6 months, forecasted earnings growth for Asia ex Japan has been revised higher and at the time of writing sits at almost +29% year on year ("yoy"), we will see a meaningful slowdown next year (current consensus is +14% yoy), reflecting the higher base effect. While a slowdown from 2024, this would be a second consecutive year of above-trend growth (long-term earnings growth in Asia ex-Japan has been around 7%).

To track how expectations are shifting, we use the 3-month moving average of our earnings revision ratio (ERR), which calculates the ratio of analyst earnings upgrades to downgrades (we use a 3-month moving average to take out some of the 'noise' in the data) has seen a pause following its rapid ascent since May of this year to its highest level since late 2021. As intimated above, we see some signs of this peaking in India, although it remains at a healthy level. China's ERR has been improving since June but remains at a depressed level below the country's long-term average. It will be interesting to see if the macro policy changes that caused the rally in share prices will soon be reflected in analysts' earnings expectations too. The ERR is currently strongest in Taiwan, south Korea and the major ASEAN countries, suggesting a strong foundation for earnings growth expectations for the coming 12 months.

The China rally has impacted the valuation of the Asia ex Japan market. Based on NTM prospective PER (price-to-earnings ratio) and PBR (price-to-book ratio), the market is currently trading at above its 10-year average valuation for both metrics, and around one standard deviation above in terms of NTM PBR. This is also evident in the implied cash flow return on investment for the market, which at 10% sits at approximately a 10% premium to its long-term averages over various periods. This suggests the regional market is slightly expensive relative to history. The offset to this is that expected earnings growth for 2024 and 2025 is above the long-term trend also. If this earnings momentum persists or improves, it should be supportive for equities because, which valuations are definitely above long-term averages they are far from extreme levels.

In addition to an attractive earnings growth outlook and reasonable valuations, there are some attractive long-term investment themes in the region. We are seeing improving capital management and corporate governance reform in several Asian markets now. Asia still has a growing middle class with rising incomes and continues to urbanise – these are all supportive of long-term consumption spending, although we believe that spending on services may grow more rapidly than on goods going forward, benefiting industries such as travel and leisure. Asia is also central to the rising silicon / digital intensity of all our lives and is home to some the leading companies in key enabling technologies. Life and health insurance remain underpenetrated in Asia and there are many years of growth ahead for well capitalised insurers with a regional footprint. We also expect to see continued growth in health care and related demand, including in new emerging growth areas such as medical aesthetic.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- * The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth by more than the MSCI Emerging Markets Index over periods of five years, after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least 80% of its assets in shares of companies which are domiciled or conduct their principal activities in emerging markets (countries whose economy and financial markets are still developing), including China.

Exposure to these shares will typically be direct (purchasing the relevant shares themselves) but may also be indirect (gaining exposure to the shares through other investments). Indirect investments include:

- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation).
- Depositary receipts (a type of listed security which enables investors to hold shares in foreign companies).
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

Other investments

The Fund may also invest in:

- Other transferable securities, including fixed interest and other debt related securities;
- Cash and cash equivalents;
- Money market instruments; and
- · Other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative investment use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies). Use of derivatives is typically expected to be limited.

Geographic location (where we invest)

The Fund has a focus on investments in emerging markets. Up to 20% of the Fund's portfolio could be invested outside of emerging markets.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund's portfolio may include some overlap with the Index but does not intend to replicate it and may vary considerably. The Fund may include shares and countries that are not included in the Index. The Fund typically invests in shares of around 40 – 60 companies of any size or industry.

In selecting investments, the Investment Manager seeks to identify investment opportunities based on the investment merit of each underlying company.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

The Investment Manager uses its proprietary research to identify companies with strong management of ESG risks and a business strategy directed toward sustaining profit growth over the long term.

The Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in:

- Companies which generate more than 5% of revenue from tobacco production, distribution or wholesale trading.
- Companies which generate more than 5% of revenue from the production or distribution of weapons.
- Companies which generate more than 5% of revenue from coal-based power generation or the mining or distribution of thermal
 coal.
- Companies involved in the production, sale or distribution of dedicated and key components of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).
- · Companies assessed as 'fail' under the UN Global Compact.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie Emerging Markets Fund (W Accumulation) returned 4.47%, whilst its benchmark - the MSCI Emerging Markets Net Dividends Index - returned 7.51% (both returns in UK sterling).

OVERVIEW

The performance of emerging markets was strong during the 6-month period ending 30 September 2024. The first half of the period witnessed elections in India and Mexico with surprising results. While the incumbent party lost its singular majority in India and was able to form government only with the help of its coalition partners, Sheinbaum achieved a super majority in the popular vote, Mexican Congress, and the key Governorships.

China performed strongly throughout the period, delivering benchmark-beating performance in the first three months on continuation of policy announcements from the Chinese government to support the property market and stimulate consumption activity. The second half of the period saw a significant policy pivot from Chinese policymakers along with coordinated monetary, property, and equity market changes, leading to Emerging Markets ("EM"s) witnessing a near double-digit growth—driven by a >20% return in China.

At the start of the period, strong data coming out of the US tempered rate cut expectations. As a result, there was significant US dollar strength and EM currency weakness in this period as well. Benchmark returns were impacted by weak currencies in markets like Brazil. Mexico. and Indonesia.

The U.S Federal Reserve (Fed) finally cut rates for the first time in four years in September by an unusually large 50 basis points. This resulted in strong performance from the more interest rate sensitive countries in EM, such as those in Southeast Asia (Indonesia, Thailand, and Philippines), in the July–September quarter, while Korea and Taiwan were mute owing to some consolidation in large-cap Asian technology stocks, which are concentrated in these markets. Also, Latam markets were differentiated with reasonable performance coming out of Brazil (up nearly 7%) versus Mexico, which was down nearly 3% amid investor concerns following the passage of a controversial judicial reform.

Among sectors, technology, especially semiconductors, continued their momentum in the first half of the period under consideration, with index heavyweight Taiwan Semiconductor Manufacturing Company ("TSMC") up double digits. The latter half saw relative weakness in information technology stocks, with Korean technology stocks being the main driver of weakness. Consumer discretionary and Industrials generated positive relative returns, with strong stock selection in both areas.

SIGNIFICANT CHANGES

At the end of the reporting period, the fund's largest active overweight from a sector level was information technology and the largest overweights were in Korea and India respectively. During the period the fund entered new investments in the following companies: Quanta, Shinhan Financial Group, Trip.com, PKO, Mediatek, and Apollo Hospitals.

The fund exited the following companies in the period: Wuxi Biologics, LG Energy Solutions, Shanghai Fosun Pharma, PT Telkom, Orbia, Xinyi Solar, Naver, and Credicorp.

POSITIVE/NEGATIVE CONTRIBUTORS

Top contributors for the fund were positions in Chinese consumption/digital economy—specifically Tencent and Meituan which were up strongly in the period. Another strong performer was Capitec in South Africa which continues to deliver operationally.

Detractors were Samsung Electronics which was impacted by slowing demand out of traditional memory markets such as PCs and smartphone. Furthermore, we saw weakness out of stocks in Mexico following political uncertainty as a result of potential judiciary changes. Walmex and Banorte were relative underperformers in the period.

From a country perspective, China/HK generated positive relative returns while Korea and India remained challenging.

OUTLOOK

Central banks shifting their monetary policies towards rate cuts should be supportive for emerging markets, and for Quality Growth stocks in our view. With the Fed making its first (in four years) and unusually large 50 bps cut in rates in September, the market is now looking at significant rate cuts over the next 12 months, which could be supportive for risky assets, signalling the start of an easing monetary policy cycle. However, political and geopolitical risks remain high: Notably, the upcoming US presidential elections bring an element of higher uncertainty on policy direction.

INVESTMENT REVIEW (Continued)

The most dramatic move in our asset class was a coordinated policy shift from the Chinese authorities – late September in a joint press conference the People's Bank of China (PBOC), China Securities Regulatory Commission (CSRC) and National Financial Regulatory Administration (NFRA) announced a range of policy stimulus. Both the policy measures and the coordination of this move send a very positive signal. Additionally, the PBOC appeared to signal an important pivot from a focus on defending the currency towards a focus on fighting deflation.

We have maintained our China exposure in the belief that there has been a significant disconnect between share prices and strong fundamentals. Whilst we have seen material price appreciation across the Chinese businesses we own over the past few weeks, we continue to view valuations as depressed. Strong outperformance of the Chinese stocks in our portfolio is encouraging and supports our view that a better performing China market over the long term is likely to be led by the leading franchises in China - the type of businesses we own.

We continue to see long-term upside potential in companies with quality and growth characteristics, and our strategy remains tilted towards these types of companies. Within this group of companies, we continue to see many opportunities that benefit from ongoing structural themes within emerging markets.

For instance, we have long believed that emerging markets are increasingly the producers, and not just consumers, of globally relevant intellectual property and an example of this is in Artificial Intelligance ("AI"), where emerging markets hold a myriad of opportunities. Our stocks that benefit from the AI transition are wide ranging and diversified. Firstly, we are invested in immediate beneficiaries: semiconductor companies such as TSMC, Samsung, and SK Hynix. We continue to believe that our Korean and Taiwan tech companies are best positioned to benefit from a structural demand cycle coming out of AI. We believe that these companies are now harvesting their IP leadership and able to capture both pricing power as well as tremendous unit growth.

We also see a significant opportunity set in areas like Indian consumer, where a host of high-quality companies are able to benefit from the country's attractive demographic and economic features. We see a convergence of positive drivers in India which we think looks set to continue over the long term. It's not just about attractive demographics and growing incomes – we have seen far-reaching changes to India's entire domestic economic and legislative framework which continue to have positive influence. For instance, over the last few years India has introduced a unified tax structure, a new insolvency and bankruptcy code, and stronger regulation for the real estate industry, to name but a few reforms.

We have several companies in the portfolio that have the right ingredients to benefit from these themes. Indian financials also continue to benefit from growing Indian consumption and are an active bet for the fund. We believe the second stage of the Indian stock market story will be more focused on the quality and predictability of earnings in addition to continued economic growth.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

COMPARATIVE TABLES (Continued)

* The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least 80% of its assets in shares of companies which are domiciled, listed or conduct a significant proportion of their business in European countries (excluding the United Kingdom).

Exposure to these shares will typically be direct (purchasing the relevant shares themselves) but may also be indirect (gaining exposure to the shares through other investments). Indirect investments include:

- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation).
- Depositary receipts (a type of listed security which enables investors to hold shares in foreign companies).
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

Other investments

The Fund may also invest in:

- · Shares of other companies;
- · Other equity related securities;
- · Cash and cash equivalents;
- · Money market instruments; and
- Other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or costs and/or generate extra income or growth). However, the Fund can introduce more speculative investment use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies). The Fund will not take short positions (a technique where investors seek to profit from decreases in value of securities, indices, currencies and/or index rates). Use of derivatives is typically expected to be limited.

Geographic location (where we invest)

The Fund focuses on investments in Europe (excluding the UK) although up to 20% of the Fund's investments could be in non-European countries.

How we select investments (investment strategy)

The Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund typically invests in shares of around 20-40 companies of any size, industry or market capitalisation although the Investment Manager may invest in fewer or more companies where it considers this to be in the interests of the Fund.

The Fund invests in companies which, in the opinion of the Investment Manager:

- Have the potential to generate or sustain a return on invested capital where the return is higher than the cost of capital;
- Have the potential to develop an attractive growth profile and/or cash flow generation over the long term; and
- Have supportive accounting and environmental, social and governance (ESG) practices.

In assessing potential investments, the Investment Manager evaluates the companies for the above characteristics and assesses a company's value by looking at a wide range of financial and economic factors at the level of the relevant company, its sector and the broader economy (a fundamental approach). The Investment Manager focuses on forecasting a company's potential growth and returns, based on research and due diligence and using the Investment Manager's proprietary research platform. In addition, the Investment Manager seeks to identify specific sectors which it believes have the possibility of generating attractive growth or returns.

INVESTMENT OBJECTIVE & POLICY (Continued)

The Fund aims to hold investments for the long term, with relatively low portfolio turnover. The Investment Manager may also engage with the management of the companies in which the Fund invests or may invest, to discuss potential sources of value creation.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio.

The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in:

- Companies which generate more than 5% of revenue from tobacco production, distribution or wholesale trading.
- Companies which generate revenue from the production or distribution of controversial weapons (I.e. antipersonnel mines, nuclear weaponry, biological and chemical weaponry and cluster munitions).
- Companies which generate more than 5% of revenue from the production or distribution of conventional weapons.
- Companies which generate more than 5% of revenue from the production or distribution of fossil fuels.
- Companies which generate revenue from mining of metals and minerals as defined by GICS sub-industries Diversified Metals and Mining, Copper, Gold and Precious Metals and Minerals.
- Companies generating more than 5% revenue from coal based power generation or the mining or distribution of thermal coal.
- Companies that generate 15% or more of their revenues from nuclear power generation.
- · Companies assessed as 'fail' under the UN Global Compact.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie European Unconstrained Fund (W Accumulation) returned -8.22%, whilst its benchmark - the MSCI Europe ex UK Net Dividends Index - returned -0.35% (both returns in UK sterling).

OVERVIEW

European equity markets delivered modestly negative returns over the 6-month period ending September 30, 2024 in GBP terms. After a strong April and May period, performance has been mixed and volatile.

At the start of the period, sentiment was buoyed by the overall resilient economic data across the US and Europe. Weakness in global developed markets such as US economic data, a rate hike from the Bank of Japan, and thin liquidity then battered stocks in the summer. However, the long-anticipated start of the US Federal Reserve's (Fed) rate cutting cycle in September and a raft of stimulus measures by Chinese policymakers soothed investor concerns and drove global (including European) markets higher into the end of the period. This led to performance being roughly flat/slightly down in GBP terms over the period.

On the monetary policy front, the European Central Bank cut its interest rate by a cumulative 50 basis points over the period. In September, the Fed lowered rates by an unusually large 50 basis points (bps), essentially shifting its focus from containing inflation to support a softening US economy.

During the April—June quarter, US large-cap technology companies dominated market leadership, buoyed by continued enthusiasm for artificial intelligence. From a regional perspective, US equities outperformed Europe during the quarter, given the lack of exposure to these technology names in Europe. In terms of style, Growth outperformed Value in the US but underperformed in Europe and Japan.

In the latter half of the 6-month period, against the context of rate cuts and better-than-feared economic prospects, rate-sensitive sectors performed strongly. Growth stocks rose but to a lesser extent than Value.

SIGNIFICANT CHANGES

At the end of the period, the portfolio's largest sector exposures are information technology and healthcare. At a country level, France and Italy represented the portfolio's biggest country weight in absolute terms.

Our largest sector exposures reflect our high conviction in the seismic thematic shifts which bring structural opportunities and disruptions. We believe these can offer attractive investment returns, as part of our mega-trends assessment, and proprietary thematic analytical framework.

Technology: new technologies such as artificial intelligence (AI), technological and geopolitical fragmentation, cloud computing and cyber security, and robotics, automation and AI are key themes which we have identified as having strong investment opportunity. Our exposure to information technology as a whole is reflective of the high conviction in companies which are well placed to benefit from these themes.

Healthcare: a key theme we have identified as an investment opportunity is ageing populations. A trend towards an ageing population leads to an increased incidence of diseases. One of the themes that this fuels is what we have labelled the 21st Century diseases, which are diabetes, obesity and cancers. These are to some extent co-morbidities, related to either lifestyle and/or simple ageing. Such rapid rise in disease incidence requires an increase in healthcare infrastructure in general, which we define in the broad sense of the term, i.e. comprising both physical healthcare infrastructure, such as hospitals, but also more investment in drug development and production, as well as more demand for medical technology in general.

Over the period we bought BE Semiconductor, Novo Nordisk, Partners Group and Apple. We exited Assa Abloy and Nike.

Partners Group is a high-quality middle market private asset manager that is well placed to benefit from the secular trend, with a robust investment approach and a hard-to-replicate product offerings that appeal to both large institutional investors and private wealth customers. Novo Nordisk is a pure-play organic R&D biopharma company focussed on diabetes, obesity and 'Bio-pharma'. The diabetes segment is a structural growth category given the stable, low-competition market structure in the global insulin and GLP-1 markets, while obesity has the potential to be the largest drug category of all time by 2030.

BE Semiconductor Industries (Besi) is a Dutch company which designs and manufactures semiconductor equipment. Trends such as More than Moore are gaining traction, with Intel, TSMC and Samsung investing materially more into the backend after decades of neglect. The apex of this opportunity centres on Hybrid Bonding, which we expect to grow substantially in the Besi business. Finally, Apple is a leading global brand for technology products that generates high returns on invested capital and attractive growth. Apple's products are priced at a premium to peers due to the company's brand value in product design and user experience. We expect the digital and real world only to become more integrated through time, with Apple's products as a key interface. We see upside opportunities in Virtual/Augmented Reality and AI, and believe the company should enter an earnings upgrade cycle as AI features are released.

INVESTMENT REVIEW (Continued)

We sold Assa Abloy to fund higher conviction names. The stock outperformed by 20% over the past 12 months and we now have more limited upside, leaving this as a good opportunity to switch into a higher conviction name. We exited Nike given the weaker-than-expected growth. We believe that its product innovation will take longer to manifest in results, and we face risks of further downgrade.

POSITIVE/NEGATIVE CONTRIBUTORS

At a stock level, two industrials' companies, Assa Abloy and Atlas Copco, alongside the UK healthcare name Oxford Nanopore Technologies were the biggest contributors to performance.

The largest detractors were Sartorius Stedim Biotech, the Paris listed biotech company, ASML, the Dutch supplier of semiconductor manufacturing equipment, and Moncler, the Italian luxury goods company.

At a sector level, Industrials contributed positively to performance, while Information Technology was the biggest detractor.

OUTLOOK

Risk of persistent inflationary pressure: Looking to the rest of 2024, we continue to highlight the risk of a stickier and longer-lasting inflation, given ongoing elevated wage inflation, deglobalisation, technological and geopolitical fragmentation, and energy transition. For the remainder of the year and into 2025, the ongoing focus will be inflation—a key determinant of monetary policies. The market will remain on inflation watch, which will continue to fuel both volatility and the debate on timing of interest rate cuts.

Synchronised pivot in central banks: Central banks shifting their monetary policies towards rate cuts should be supportive for risky assets, and for Quality Growth stocks in our view. With the Fed making its first (in four years) and unusually large 50 bps cut in rates in September, the market is now looking at significant rate cuts over the next 12 months, which could be supportive for risky assets, signalling the start of an easing monetary policy cycle. The focus of the market will now be on whether the magnitude of cuts expected over the next 12 months is overly optimistic—this will become known only with each inflation and jobs data print, which could keep the market volatile for the time being.

Economic slowdown remains our central scenario: In the next 12 months, another source of risk is whether we are in the late economic cycle and approaching a point of higher risk of recession or whether the economic momentum can remain well oriented. We see an ongoing risk of slowdown in economic growth and maintain our probability of recession at c.35–40% (i.e., not a central scenario, but not a negligible risk). Ultimately, when an economic slowdown is met with interest rate cuts, equity markets should be somewhat supported.

Corporate earnings growth likely pedestrian: The corporate earnings growth picture remains mixed. Earnings momentum has turned positive, but this is helped mainly by Technology and Communications, whilst other sectors have weaker growth and estimates downgrades. We increased our top-down earnings growth forecasts slightly, which remain below consensus.

Valuation discipline critical: from a regional perspective, European and Asian equities offer more valuation support relative to history and other developed market equities. We are focusing on attractive valuations on stock-specific and case-by-case basis. At this stage, we continue to find more attractively valued Quality Growth opportunities outside the US.

Political and geopolitical risks remain high: Notably, the upcoming US presidential elections bring an element of higher uncertainty on policy direction.

As long-term investors, we are invested in some attractive structural growth trends around Al, Energy Transition and Ageing Population, which offer good long-term prospects, although we believe it is critical to maintain valuation discipline to capture the pockets of these themes that still have valuation support. We do see signs of froth emerging, notably in the Al theme, and have been selectively positioned in areas where we can find strong support from fundamentals and valuations.

Zehrid Osmani, Sam Cottrell, CFA & Jonathan Regan, CFA Fund Managers 30 September 2024

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- 7 The "opening net asset value per share" figure is based on the bid-market prices at close of business, whilst the highest/lowest share prices are based on mid dealing prices (the price at which shares are sold).
- * The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least 80% of its assets in shares of companies which are incorporated or domiciled anywhere in the world, including in China and in emerging markets (countries whose economy and financial markets are still developing, such as those which are included within the MSCI Emerging Markets Index).

Exposure to these shares will typically be direct (purchasing the relevant shares themselves) but may also be indirect (gaining exposure to the shares through other investments). Indirect investments include:

- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation).
- Depositary receipts (a type of listed security which enables investors to hold shares in foreign companies).
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

Other investments

The Fund may also invest in:

- Other collective investment schemes;
- Money market instruments; and
- Deposits.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or costs and/or generate extra income or growth). However, the Fund can introduce more speculative investment use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies). The Fund will not take short positions (a technique where investors seek to profit from decreases in value of securities, indices, currencies and/or index rates). Use of derivatives is typically expected to be limited.

Geographic location (where we invest)

The Fund can invest anywhere in the world.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund invests in companies which, in the opinion of the Investment Manager:

- Have the potential to generate or sustain a return on invested capital where the return is higher than the cost of capital; and
- Have the potential to develop an attractive growth profile and/or cash flow generation over the long term.

The Fund typically invests in shares of around 20-40 companies of any size, industry or market capitalisation, although the Investment Manager may invest in fewer or more companies where it considers this to be in the interests of the Fund. In assessing potential investments, the Investment Manager evaluates the companies for the above characteristics, and assesses a company's value by looking at a wide range of financial and economic factors at the level of the relevant company, its sector and the broader economy (a fundamental approach). The Investment Manager focuses on forecasting a company's potential growth and returns, based on research and due diligence and using the Investment Manager's proprietary research platform.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in:

- Companies which generate more than 5% of revenue from tobacco production, distribution or wholesale trading.
- Companies which generate revenue from the production or distribution of controversial weapons (I.e. antipersonnel mines, nuclear weaponry, biological and chemical weaponry and cluster munitions).
- Companies which generate more than 5% of revenue from the production or distribution of conventional weapons.
- Companies which generate more than 5% of revenue from the production or distribution of fossil fuels.
- Companies which generate revenue from mining of metals and minerals as defined by GICS sub-industries Diversified Metals and Mining, Copper, Gold and Precious Metals and Minerals.
- Companies generating more than 5% revenue from coal based power generation or the mining or distribution of thermal coal.
- Companies that generate 15% or more of their revenues from nuclear power generation.
- Companies assessed as 'fail' under the UN Global Compact.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie Global Unconstrained Fund (W Accumulation) returned -5.81%, whilst its benchmark - the MSCI All Countries World Index - returned 3.29% (both returns in UK sterling).

OVERVIEW

The global equity markets delivered positive returns over the 6-month period ending September 30, 2024. After posting moderate gains over the first half of the period, the markets witnessed a roller coaster rally in the second, ending the period with strong returns despite several bouts of volatility.

At the start of the period, sentiment was buoyed by the overall resilient economic data across the US and Europe, and increased support measures from the Chinese authorities for the real state sector. Weaker US economic data, a rate hike from the Bank of Japan, and thin summer liquidity then battered stocks in early August. However, the long-anticipated start of the US Federal Reserve's (Fed) rate cutting cycle in September and a raft of stimulus measures by Chinese policymakers soothed investor concerns and drove markets higher into the end of the period.

On the monetary policy front, the European Central Bank cut its interest rate by a cumulative 50 basis points (bps) over the period. In September, the Fed lowered rates by an unusually large 50 bps, essentially shifting its focus from containing inflation to support a softening US economy.

During the April—June quarter, US large-cap tech companies dominated market leadership, buoyed by continued enthusiasm for artificial intelligence. From a regional perspective, US equities outperformed Europe during the quarter. However, Emerging Market equities outperformed developed markets over this period, driven by further stimulus from the Chinese authorities and the out performance of Asia ex-Japan. In terms of style, Growth outperformed Value in the US but under-performed in Europe and Japan.

In the latter half of the 6-month period, against the context of rate cuts and better-than-feared economic prospects, rate-sensitive sectors performed strongly. Growth stocks rose but to a lesser extent than Value. From a regional perspective, emerging market equities outperformed developed markets, driven by a rally in China. Within developed markets, US equities outperformed other regions, while Japan ended in negative territory due to the historic sell-off in August.

SIGNIFICANT CHANGES

At the end of the period, the portfolio's largest sector exposures are information technology and healthcare. At a country level, the United States and Netherlands represented the portfolio's biggest country weight in absolute terms.

Our largest sector exposures reflect our high conviction in the seismic thematic shifts which bring structural opportunities and disruptions. We believe these can offer attractive investment returns, as part of our mega-trends assessment, and proprietary thematic analytical framework.

Technology: new technologies such as artificial intelligence (AI), technological and geopolitical fragmentation, cloud computing and cyber security, and robotics, automation and AI are key themes which we have identified as having strong investment opportunity. Our exposure to information technology as a whole is reflective of the high conviction in companies which are well placed to benefit from these themes.

Healthcare: a key theme we have identified as an investment opportunity is ageing populations. A trend towards an ageing population leads to an increased incidence of diseases. One of the themes that this fuels is what we have labelled the 21st Century diseases, which are diabetes, obesity and cancers. These are to some extent co-morbidities, related to either lifestyle and/or simple ageing. Such rapid rise in disease incidence requires an increase in healthcare infrastructure in general, which we define in the broad sense of the term, i.e. comprising both physical healthcare infrastructure, such as hospitals, but also more investment in drug development and production, as well as more demand for medical technology in general.

Over the period we bought BE Semiconductor Industries, Novo Nordisk, Partners and Apple. We exited Assa Abloy and Nike.

Partners Group is a high-quality middle market private asset manager that is well placed to benefit from the secular trend, with a robust investment approach and a hard-to-replicate product offerings that appeal to both large institutional investors and private wealth customers. Novo Nordisk is a pure-play organic R&D biopharma company focussed on diabetes, obesity and 'Bio-pharma'. The diabetes segment is a structural growth category given the stable, low-competition market structure in the global insulin and GLP-1 markets, while obesity has the potential to be the largest drug category of all time by 2030.

INVESTMENT REVIEW (Continued)

BE Semiconductor Industries (Besi) is a Dutch company which designs and manufactures semiconductor equipment. Trends such as More than Moore are gaining traction, with Intel, TSMC and Samsung investing materially more into the backend after decades of neglect. The apex of this opportunity centres on Hybrid Bonding, which we expect to grow substantially in the Besi business. Finally, Apple is a leading global brand for technology products that generates high returns on invested capital and attractive growth. Apple's products are priced at a premium to peers due to the company's brand value in product design and user experience. We expect the digital and real world only to become more integrated through time, with Apple's products as a key interface. We see upside opportunities in Virtual/Augmented Reality and AI, and believe the company should enter an earnings upgrade cycle as AI features are released.

We sold Assa Abloy to fund higher conviction names. The stock outperformed by 20% over the past 12 months and we now have more limited upside, leaving this as a good opportunity to switch into a higher conviction name. We exited Nike given the weaker-than-expected growth. We believe that its product innovation will take longer to manifest in results, and we face risks of further downgrade.

POSITIVE/NEGATIVE CONTRIBUTORS

At a stock level, the US Information Technology firm NVIDIA was the biggest contributor to performance, followed by ResMed, the US medical equipment company, and Zoetis, the US animal health company.

The largest detractors were Sartorius Stedim Biotech, the Paris listed biotech company, ASML, the Dutch supplier of semiconductor manufacturing equipment, and Estee Lauder, the US cosmetics company.

At a sector level, Information Technology and Industrials provided the strongest contribution. Health Care, Consumer Discretionary and Consumer Staples contributed negatively to returns for the period. At a country level, the United States and Sweden were strong in their contribution in absolute terms. France and the Netherlands were the biggest detractors.

OUTLOOK

Risk of persistent inflationary pressure: Looking to the rest of 2024, we continue to highlight the risk of a stickier and longer-lasting inflation, given ongoing elevated wage inflation, deglobalisation, technological and geopolitical fragmentation, and energy transition. For the remainder of the year and into 2025, the ongoing focus will be inflation—a key determinant of monetary policies. The market will remain on inflation watch, which will continue to fuel both volatility and the debate on timing of interest rate cuts.

Synchronised pivot in central banks: Central banks shifting their monetary policies towards rate cuts should be supportive for risky assets, and for Quality Growth stocks in our view. With the Fed making its first (in four years) and unusually large 50 bps cut in rates in September, the market is now looking at significant rate cuts over the next 12 months, which could be supportive for risky assets, signalling the start of an easing monetary policy cycle. The focus of the market will now be on whether the magnitude of cuts expected over the next 12 months is overly optimistic—this will become known only with each inflation and jobs data print, which could keep the market volatile for the time being.

Economic slowdown remains our central scenario: In the next 12 months, another source of risk is whether we are in the late economic cycle and approaching a point of higher risk of recession or whether the economic momentum can remain well oriented. We see an ongoing risk of slowdown in economic growth and maintain our probability of recession at circa 35–40% (i.e., not a central scenario, but not a negligible risk. Ultimately, when an economic slowdown is met with interest rate cuts, equity markets should be somewhat supported.

Corporate earnings growth likely pedestrian: The corporate earnings growth picture remains mixed. Earnings momentum has turned positive, but this is helped mainly by Technology and Communications, whilst other sectors have weaker growth and estimates downgrades. We increased our top-down earnings growth forecasts slightly, which remain below consensus.

Valuation discipline critical: from a regional perspective, European and Asian equities offer more valuation support relative to history and other developed market equities. We are focusing on attractive valuations on stock-specific and case-by-case basis. At this stage, we continue to find more attractively valued Quality Growth opportunities outside the US.

Political and geopolitical risks remain high: Notably, the upcoming US presidential elections bring an element of higher uncertainty on policy direction.

As long-term investors, we are invested in some attractive structural growth trends around AI, Energy Transition and Ageing Population, which offer good long-term prospects, although we believe it is critical to maintain valuation discipline to capture the pockets of these themes that still have valuation support. We do see signs of froth emerging, notably in the AI theme, and have been selectively positioned in areas where we can find strong support from fundamentals and valuations.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- 7 The "opening net asset value per share" figure is based on the bid-market prices at close of business, whilst the highest/lowest share prices are based on mid dealing prices (the price at which shares are sold).
- * The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

FTF Martin Currie Japan Equity Fund

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least 80% of its assets in shares of Japanese companies.

Other investments

In addition, where, in the Investment Manager's opinion, attractive investment opportunities cannot be found or for liquidity management purposes, the Fund may also invest in:

- · Cash or cash equivalents;
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or costs and/or generate extra income or growth). Derivatives are financial contracts whose value is linked to the price of another asset, e.g. indices, interest rates, share prices or currencies. Use of derivatives is typically expected to be limited.

Geographic location (where we invest)

The Fund focuses on investment in Japan.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund typically invests in shares of around 30 - 60 companies of any size, industry or market capitalisation.

The Fund invests in companies which, in the opinion of the Investment Manager, have above average growth prospects relative to the shares of Japanese companies as a whole.

In particular, the Investment Manager seeks out domestic and service orientated companies which it believes will benefit from growth drivers. The Fund aims to hold investments for the long term, with relatively low portfolio turnover. As a result, there may be periods (sometimes long periods) where a significant proportion of the Fund's portfolio is invested in growing companies which are mid and smaller sized.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable growth. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

FTF Martin Currie Japan Equity Fund

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie Japan Equity Fund (W Accumulation) returned -3.40%, whilst its benchmark - the Japan TSE 1st Section (TOPIX) Index - returned -3.64% (both returns in UK sterling).

OVERVIEW

The Japanese stock market, as measured by Topix, was down over the 6-month period ending 30 September 2024. While the market was up in yen terms in the first half of the period, a very weak yen impacted on unhedged GBP returns; the situation reversed in the second half, with Topix down in yen terms but rising in GBP slightly due to a strengthening in the Japanese currency.

The weak yen continued to be a feature of the market in the April-June quarter despite the changes to monetary policy in Japan amid reduced expectations for US Federal Reserve rate cuts. A more hawkish Bank of Japan (BoJ) and talk of a reduction in the balance sheet saw slightly higher bond yields and pressured growth stocks in Japan whilst supporting financials. However, it was not seen as sufficient to halt the declining yen. August saw incredible and historical volatility. Though it is not entirely clear as to what caused this severe volatility, it probably was due to the BoJ raising rates on the last day of July, which along with expectation of US rate cuts led to a rapid appreciation of the yen. This in turn saw carry trades unwinding and retail investors hit with margin calls which exacerbated the moves. The reality is that fundamentals had not substantially changed and with that realisation the market began a steady climb back up. After rates were raised by the BoJ in July, the initial approach seemed to be hawkish with regards future rate rises and also selling off assets accumulated via quantitative easing (QE) on the Bank's balance sheet, although this outlook has since become more clouded.

In terms of sectors, financials, in particular insurance and bank sectors, were the top performers in the first three months of the period under consideration, helped by the higher interest rate expectation. Underperformers included autos due to a testing certificate scandal, rail, and real estate. On the other hand, retail, textiles, construction, marine transport, and precision were the top sectors in the July-September quarter. The bottom performers included autos, brokers, mining, and banks. On balance, marine transport, non-ferrous metals and insurance were strong over the whole 6-month period, with transport, ferrous metals, rubber products and mining lagging.

Toward the end of the 6-month period, there was a significant change in style rotation, with growth outperforming value and small and mid-caps outperforming the large caps. This is almost certainly driven by the change in direction of the yen and began in June.

SIGNIFICANT CHANGES

During the reporting period, the fund started a position in Tokyo Electron (TEL). TEL is Japan's largest SPE company, with a wide line up of mostly front-end equipment, with number 1 or 2 market shares in several oligopolistic machine markets. This allows them to make margins in the 20-30% range and return-on-equity (ROE) of 25%. We believe TEL has outstanding salesforce capability and is well placed to benefit from the growth of semiconductor manufacturing across both logic and memory markets. As the valuation has come to an attractive level, we initiated a position.

OBIC Business Consulting (OBC) is another new position created during the period. OBC is a domestic ERP software provider targeting small- to mid-sized companies (SME) with 20-1000 employees in Japan. In the SME segment, the cloud ERP penetration is still very low in Japan, at less than half compared to the US. OBC is well positioned to capture the shift to cloud leveraging its strong brand recognition as well as solid call centre support from where proprietary staffs solve issues in a timely manner. In lieu of building this position, we trimmed our position in Obic which is another ERP software provider targeting mid- to larger-sized companies where the shift to cloud has already progressed.

Hoya is another new name. Hoya has several very distinct businesses, all of which offer growth opportunities. The semiconductor mask blanks business is a duopoly and they currently have 100% share of EUV blanks. The Hard Disk Drive substrates has been under pressure, but a move towards glass substrates could see substantial additional demand and data storage demand is clearly growing. Lastly the Life Care business is expected to grow at a moderate rate, but their innovative my-opia control lenses provide upside. The company makes a high ROIC of approximately 40% and the management are well regarded.

On the sell side, we trimmed our position in FUJIFILM, which has a diversified business portfolio in healthcare, electronic materials, and imaging, as the rise in share price has led to a higher valuation. For the same reason, we also trimmed our position in MonotaRO, an operator of an E-commerce platform selling indirect materials for factories and businesses.

We have also sold the position in machinery company Amada. Our thesis required an earnings recovery which would enable and encourage the company to improve shareholder returns. Both of these are still possible, but look likely to be substantially delayed and the risk is that the poor earnings see a lower share price in the short term and lessen the chances of the improved returns for now.

We continue to invest in quality growth companies with exposure to long term structural changes in the Japanese economy and society. There is no doubt we continue investing in these three areas – ageing society, technology, and new dynamics, which address long term structural changes in Japan. We believe companies that solve for the structural changes caused by these themes will benefit: health care, labour shortage, digitisation, technology enablement, disruptors and ESG improvers.

FTF Martin Currie Japan Equity Fund

INVESTMENT REVIEW (Continued)

We believe there are investment opportunities here. In our investment process when we start looking at companies, we look at the long-term track record in terms of growth rates, profitability, and quality of balance sheet. Added to this, we employ multiple screening tools. The outcome includes Japanese companies with large overseas exposure including exporters and those which have significant manufacturing capability in local markets. However, we do continue to have a bias towards domestic and service companies.

POSITIVE/NEGATIVE CONTRIBUTORS

Retail trade and pharmaceuticals were the largest contributors from a sector perspective, while from a relative contribution perspective transportation equipment was most additive, alongside the former two sectors. In terms of detractors, machinery and services were most detractive. The Fund has a structural overweight to services, and the industry's broader underperformance in recent years has been detractive both in absolute and relative terms to the Fund's performance.

At a stock level, JMDC, Rohto Pharmaceutical and MonotaRO were notable positive contributors to performance. Meanwhile, notable detractors from performance included SMC, M&A Research Institute and Horiba.

OUTLOOK

The weak yen has been a major market feature over the past 18 months, which has driven the value style to perform strongly, but the most recent quarter saw a change in direction with the yen moving from Y160/\$ to Y150/\$ at the time of writing (at one point Y143/\$), as interest rates moved in opposite directions in the US and Japan. As markets shift towards anticipating more interest rate cuts in the US and some hikes in Japan, the Japanese yen shows less tendency towards directional weakening. Consequently, the momentum of beneficiaries of a weaker yen and value styles has diminished. In this environment, we believe companies capable of delivering sustainable earnings growth and high returns on capital will continue to be rewarded by the markets.

Economic slowdown remains our central scenario: In the next 12 months, another source of risk is whether we are in the late economic cycle and approaching a point of higher risk of recession or whether the economic momentum can remain well oriented. We see an ongoing risk of slowdown in economic growth and maintain our probability of recession at c.35–40% (i.e., not a central scenario, but not a negligible risk. Ultimately, when an economic slowdown is met with interest rate cuts, equity markets should be somewhat supported.

Corporate earnings growth likely pedestrian: The corporate earnings growth picture remains mixed. Earnings momentum has turned positive, but this is helped mainly by Technology and Communications, whilst other sectors have weaker growth and estimates downgrades. We increased our top-down earnings growth forecasts slightly, which remain below consensus.

Valuation discipline critical: from a regional perspective, European and Asian equities offer more valuation support relative to history and other developed market equities. We are focusing on attractive valuations on stock-specific and case-by-case basis. At this stage, we continue to find more attractively valued Quality Growth opportunities outside the US.

Political and geopolitical risks remain high: Notably, the upcoming US presidential elections bring an element of higher uncertainty on policy direction.

As long-term investors, we are invested in some attractive structural trends in ageing society, technology, and new dynamics, which address long term structural changes in Japan, and offer good long-term prospects, although we believe it is critical to maintain valuation discipline to capture the pockets of these themes that still have valuation support. We do see signs of froth emerging, notably in the Artificial Intelligence theme, and have been selectively positioned in areas where we can find strong support from fundamentals and valuations.

Paul Alan Danes Fund Manager 30 September 2024

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

COMPARATIVE TABLES (Continued)

⁷ The "opening net asset value per share" figure is based on the bid-market prices at close of business, whilst the highest/lowest share prices are based on mid dealing prices (the price at which shares are sold).

^{*} The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to generate an income that is higher than that of the FTSE All-Share Index and increase in value through investment growth, over periods of five years, after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in the shares of companies listed on the London Stock Exchange. These companies are incorporated/domiciled in the UK or which have significant business operations in the UK.

Other investments

The Fund may also invest in:

- Debt securities or bonds (debt obligations that pay interest) issued by governments, government-related, supranational
 organisations or corporations;
- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation);
- Other types of transferable securities;
- Cash and cash equivalents:
- · Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographic location (where we invest)

The Fund focuses on investment in the UK although the Investment Manager has discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

Typically, the number of holdings in the Fund will vary between 40 to 60 company shares and most of these will be the shares of large (such as those making up the FTSE 100 Index) companies.

The Investment Manager does not intend to invest in every company in the FTSE All-Share Index and have the freedom to invest up to 10% of the Fund's assets outside of it.

Any proportion of the Fund can be invested into specific industry sectors, but the Investment Manager seeks to avoid any unintentional emphasis on a sector in a way that could increase the level of risk. The Investment Manager tries to further reduce risk by making sure no single company share dominates the Fund's investments. Normally, the Investment Manager tries to keep shareholdings in any individual large company to no more than 5% of the Fund's total value, while a shareholding in any individual medium- and small-sized company would typically be no more than 2%.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.

INVESTMENT OBJECTIVE & POLICY (Continued)

 Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

This ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

Where the Investment Manager identifies potential violations of UN Global Compact principles, the Investment Manager will establish a structured engagement process with companies to encourage improvement. The Fund will not invest in companies which generate revenue from the production or distribution of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie UK Equity Income Fund (W Accumulation) returned 6.94%, whilst its benchmark - the FTSE All-Share Index - returned 6.07% (both returns in UK sterling).

OVERVIEW

The Summer heralded the start of the next Labour era, and our new government didn't waste any time moving into action. We've already witnessed the normal political positioning of a new government announcing they've inherited a worse financial situation than anticipated. This messaging appears to be more political posturing, an astute play to allow them to claim credit for the future strength of the economy. However, such negative rhetoric has begun to weigh on consumer confidence with many awaiting more details around how the government intend on raising taxes, something they should finally reveal in October's autumn budget.

So far, the market has broadly reacted positively to the Labour victory as can be seen by the strength of sterling versus the dollar and euro. With UK growth having strengthened, sterling has jumped to its highest level against the dollar in almost a year. Sterling strength also has the effect of bearing down on inflation. All this bodes well for the more economically sensitive and domestically focused UK mid and small cap companies. However, the AIM-listed stocks have been performing poorly as speculation around potential tax changes has been rife.

At the beginning of July, the Financial Conduct Authority (FCA) announced a simplified UK listings regime that has already come into force. This is the biggest change to their listing regime in three decades, with reforms aimed at modernising the rules and making them more flexible and competitive while maintaining high standards of governance and disclosure. However, the changes aren't without some controversy, with some of the governance changes (e.g., dual class share structures) causing concerns for some industry voices. In recent years, the United Kingdom has lost some major listings to the United States, most notably Arm Holdings (ARM) choosing to list on the NASDAQ Index last year. The FCA hope the revised listing rules will encourage increased UK listings, which is important to ensure a vibrant UK small-cap market and which has long-term positive implications across the market-cap spectrum.

On 1 August, the Bank of England (BOE) announced it was cutting the base rate by 25 basis points to 5%. At the same time, the BOE provided guidance to not expect a flurry of rate cuts as they wish to avoid cutting "too quickly or by too much." September's Monetary Policy Committee ("MPC") reiterated the BOE's commitment to a gradual approach to reducing rates, with the base rate remaining at 5%. This contrasted with the US Federal Reserve's decision of a 50-basis-point rates cut. The key difference in decision making may well lie in the inflation outlook. UK inflation currently remains within range but is experiencing persistently high core inflation, especially via stubborn cost of services. The MPC will likely have further concerns about how global tensions have increased, particularly through Middle Eastern conflicts, increasing the potential for external inflationary pressures. The market is continuing to price in rate cuts over the next 12–18 months.

The fundamentals of the UK economy have been growing from strength to strength. At the end of September, the Organisation for Economic Co-operation and Development ("OECD") updated their growth outlook for the United Kingdom, with growth anticipated to be the joint second fastest in the G7, just after the United States. Regular upwards revisions of UK growth have become a feature of 2024 and something we believe will continue well into 2025. The facts on the ground are at a stark contrast to the new government's message of doom and gloom.

SIGNIFICANT CHANGES

The top five buys during the 6-months period were: Games Workshop, Dunelm Group, Barclays, National Grid and British American Tobacco.

The top five sells during the 6-months period were: Britvic, DS Smith, Unilever, SSE and Imperial Brands.

POSITIVE/NEGATIVE CONTRIBUTORS

At the sector level, stock selection in food, beverage and tobacco and financial services as well as an overweight exposure to utilities benefited returns. In contrast, stock selection in industrial goods and service and relative exposure to chemicals and goods detracted from returns.

At a stock level, Britvic was the portfolio's strongest performer over the period on the back of being targeted for acquisition. Carlsberg made a bid to buy the soft drinks manufacturer as the Danish brewer looks to further diversify its business outside the beer industry. Its June bid was rejected but a subsequent bid in July was accepted in a deal that will create an enlarged group named Carlsberg Britvic. This is further evidence of the low valuations in the UK equity market as mergers and acquisition activity continues across the market cap spectrum.

INVESTMENT REVIEW (Continued)

St James's Place, the UK-based wealth management company, had a strong six months. This rebound was driven by positive net inflow data during the second quarter of 2024 following a difficult 12-18 months for the company which has seen a reset in fees and provisions made for client servicing failures. We increased the portfolio's exposure to St James's Place as, in our view, the market had overreacted to the negative news flow and the fund was rewarded by greater participation in its rebound. We will continue to observe St James's Place closely with a focus on client retention rate and net flow data.

In contrast, Burberry Group, the British luxury fashion house, had a disappointing period, as comparable store sales fell, particularly in the Asia Pacific region and the Americas. The company now anticipates wholesale revenue for the year to decline by 30% and as a result suspend the dividend to conserve cash. They have brought in a new chief executive officer to attempt to turn around the business but, after great thought, we decided to exit the stock.

Specialist chemicals company Victrex also underperformed in the 12 months to 30 September 2024. Victrex primarily makes a high-performance polymer known as PEEK, which is used in various applications across aerospace, automotive and industrial end markets. The company has faced challenges in key markets due to prolonged destocking of inventories which has led to a decline in volumes and profitability. We think the business should start to see volume improvements across end markets as inventory levels across the value chain get back to normal. In the meantime, the business has shown early success in trials across its medical division and should benefit from increased PEEK content in Electric Vehicles relative to traditional automotives.

OUTLOOK

The UK economy is in solid shape. Data announced over the last few months has shown the economy to be gaining momentum, which bodes well for UK companies future growth prospects.

After a shallow recession at the end of 2023, the UK's prospects have u-turned with recent economic results being surprisingly stronger than forecast. Improving UK growth can be seen in the recent, better than expected Gross Domestic Product (GDP) numbers and upwards revisions to expectations for the next two years. Headline inflation is likely to remain close to 2% in the near term and easing price pressures are set to open the door to further rate cuts.

The BOE has begun its rate cutting journey and this will be warmly welcomed by households and businesses where leverage is a feature. Given the rapid rise in interest rates over the past two years it's important to appreciate that the extent of the impending cuts are likely to be limited. Returning to a period of ultra-low rates is out of the question, barring some significant external event. Market observers continue to expect UK rates to stabilise in 2026, likely in the 3-4% range.

For those with mortgages, banks have already begun pricing in the upcoming rates cuts. The 5-year Sterling Overnight Index Average (SONIA) swap rate, used by UK lenders to price loans, dropped to 3.8% in July. As mortgage repayments represent many households' largest outgoings, these reduced costs will be extremely welcome. Increasing mortgage affordability is also supportive of a strong property market, one that held up reasonably well as rates rose. Little wonder the GfK Consumer Confidence Index reached a 2-year high, albeit it's subsequently pulled back slightly amid concerns around October's budget.

The UK is a consumer economy, and improvements here will be the driving force in Britain's recovery. Consumer spending represents over 60% of GDP and increasing confidence will be supportive of growth. Challenges remain, the consumer is not one homogeneous, carefree group that's ready to spend with the cost-of-living crisis not over for many. However, an increasing proportion of the population is now entering a period of real wage growth, with salary increases outstripping inflation. Moreover, in April 2024, a circa 10% increase in the National Living Wage and a 4% cut to National Insurance were implemented. UK living standards, in aggregate, look to be on a positive trajectory.

Labour appears to have timed their ascent to power well. It's perhaps not quite as positive a backdrop as Tony Blair entered Number 10 to in 1997, but the current nascent economic recovery is a reasonable starting point for the new government to inherit. A stable government reduces medium term political risk but Labour's stated commitment to fiscal prudence, not wanting a repeat of Liz Truss's mini budget debacle, means the UK's near-term outlook won't be drastically altered.

Investors will be closely scrutinising the new governments' 'Growth Plan' as the new UK Chancellor Rachel Reeves has announced a series of measures to unlock GDP growth. Early announcements show a significant focus on planning reform and investment to get Britain building again. This won't happen overnight, and many are sceptical their house building targets will never be reached, however there is already evidence of a rebound in the construction sector with recent figures showing construction grew at the fastest rate in almost a year in May, with house building and infrastructure boosting the industry.

We are only at the foothills of the opportunity. Early-stage shoots of growth, inflation at target, rates cuts; all coupled with UK valuations at historic discounts. The stars are aligning for the UK.

¹ The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".

² The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.

³ The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".

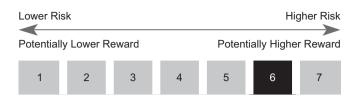

⁴ The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.

⁵ The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.

⁶ The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

^{*} This share class launched on 15 September 2023.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth by more than the FTSE All-Share Index over periods of five years after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in shares of companies listed on the London Stock Exchange that are incorporated/domiciled in the UK or which have significant business operations in the UK.

The investment portfolio of the Fund will be concentrated, typically comprising the shares of between 35 and 60 companies.

Other investments

The Fund may also invest in:

- Debt securities or bonds (debt obligations that pay interest) issued by governments, government-related, supranational organisations or corporations;
- Convertible securities (a type of corporate debt security which can be exchanged for shares in the same organisation);
- · Other types of transferable securities;
- · Cash and cash equivalents, money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographic location (where we invest)

The Fund focuses on investment in the UK although the Fund's managers have discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

While the Investment Manager has the freedom to invest up to 10% of the Fund's assets outside of these indices, this would be very unusual, and the result of a very strong opportunity identified in their research or to protect capital in unusual market conditions.

Any proportion of the Fund can be invested into specific industry sectors, but the Investment Manager seeks to avoid any unintentional emphasis on a sector in a way that could increase the level of risk.

The Investment Manager tries to further reduce risk by making sure no single company share dominates the Fund's investments. Normally, the Investment Manager tries to keep shareholdings in any individual company to between 1% and 3% of the Fund's assets.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

This ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

Where the Investment Manager identifies potential violations of UN Global Compact principles, the Investment Manager will establish a structured engagement process with companies to encourage improvement.

The Fund will not invest in companies which generate revenue from the production or distribution of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie UK Managers' Focus Fund (W Accumulation) returned 6.02%, whilst its benchmark - the FTSE All-Share Index - returned 6.07% (both returns in UK sterling).

OVERVIEW

The Summer heralded the start of the next Labour era, and our new government didn't waste any time moving into action. We've already witnessed the normal political positioning of a new government announcing they've inherited a worse financial situation than anticipated. This messaging appears to be more political posturing, an astute play to allow them to claim credit for the future strength of the economy. However, such negative rhetoric has begun to weigh on consumer confidence with many awaiting more details around how the government intend on raising taxes, something they should finally reveal in October's autumn budget.

So far, the market has broadly reacted positively to the Labour victory as can be seen by the strength of sterling versus the dollar and euro. With UK growth having strengthened, sterling has jumped to its highest level against the dollar in almost a year. Sterling strength also has the effect of bearing down on inflation. All this bodes well for the more economically sensitive and domestically focused UK mid and small cap companies. However, the AIM-listed stocks have been performing poorly as speculation around potential tax changes has been rife.

AIM stocks currently qualify for business relief (formerly business property relief), which can reduce the value of these shares for inheritance tax purposes by up to 100% if held for at least two years. There is speculation this relief could be removed, leading to some downwards pressure on the market.

At the beginning of July, the Financial Conduct Authority (FCA) announced a simplified UK listings regime that has already come into force. This is the biggest change to their listing regime in three decades, with reforms aimed at modernising the rules and making them more flexible and competitive while maintaining high standards of governance and disclosure. However, the changes aren't without some controversy, with some of the governance changes (e.g., dual class share structures) causing concerns for some industry voices. In recent years, the United Kingdom has lost some major listings to the United States, most notably Arm Holdings (ARM) choosing to list on the NASDAQ Index last year. The FCA hope the revised listing rules will encourage increased UK listings, which is important to ensure a vibrant UK small-cap market and which has long-term positive implications across the market-cap spectrum.

On 1 August, the Bank of England (BOE) announced it was cutting the base rate by 25 basis points to 5%. At the same time, the BOE provided guidance to not expect a flurry of rate cuts as they wish to avoid cutting "too quickly or by too much." September's Monetary Policy Committee (MPC) reiterated the BOE's commitment to a gradual approach to reducing rates, with the base rate remaining at 5%. This contrasted with the US Federal Reserve's decision of a 50-basis-point rates cut. The key difference in decision making may well lie in the inflation outlook. UK inflation currently remains within range but is experiencing persistently high core inflation, especially via stubborn cost of services. The MPC will likely have further concerns about how global tensions have increased, particularly through Middle Eastern conflicts, increasing the potential for external inflationary pressures. The market is continuing to price in rate cuts over the next 12–18 months.

The fundamentals of the UK economy have been growing from strength to strength. At the end of September, the Organisation for Economic Co-operation and Development (OECD) updated their growth outlook for the United Kingdom, with growth anticipated to be the joint second fastest in the G7, just after the United States. Regular upwards revisions of UK growth have become a feature of 2024 and something we believe will continue well into 2025. The facts on the ground are at a stark contrast to the new government's message of doom and gloom.

SIGNIFICANT CHANGES

The FTF Martin Currie UK Managers' Focus Fund is a best ideas portfolio, covering the full UK listed equity market cap spectrum. We have evolved the portfolio construction process to provide greater flexibility. This reduces the structural overweight to small and mid-cap stocks and allows greater flexibility in position size, to allow the Portfolio Managers to better display their conviction to their preferred investment opportunities in the UK market. The changes will not impact the type of investment the fund can make or the process that the managers use to identify the investments they believe will help the fund achieve its objective. However, the changes will allow the portfolio managers more freedom to invest in conviction in the companies that will add value to the fund over the long term

On the 2nd of July, trading was carried out to reposition the Fund. This saw the fund move from an even allocation between large cap and smid cap stocks to a positioning of 65% in large caps and in 35% smid caps. Trading looked to reduce international earnings exposure in favour of the more domestically focussed Tesco, Legal & General and Barclays. In addition, several existing large cap investments were added to, such as Shell and AstraZeneca, allowing us to express greater conviction given they are large benchmark constituents.

The top five buys during the 6-months period were: National Grid, BP, Barclays, Shell and Experian.

INVESTMENT REVIEW (Continued)

The top five sells during the 6-months period were: Genuit Group, Imperial Brands, Intermediate Capital, Polar Capital and Alpha International.

POSITIVE/NEGATIVE CONTRIBUTORS

At the sector level, an overweight exposure to construction and materials and stock selection in basic resources and consumer products and services benefited returns. In contrast, stock selection in industrial goods and services, technology and real estate detracted from returns.

At a stock level, Volution, the leading supplier of ventilation products, was the fund's largest contributor to returns over the six months to 30 September 2024. In July, the company issued an update that it expects earnings for the year ending 31 July to be ahead of market forecasts, reflecting the strong demand for its products. The UK represents over 50% of Volution's revenues, and the new government have a clear focus on the housing sector, which extends to aims at improving the rental sector. It wants to improve the health and safety standards of residential properties, particularly looking to address mould and condensation issues that are rife in private rental properties, something Volution's products can help address. Furthermore, the share price has reacted well to September's agreement to acquire Fantech Group, an Australian ventilations product company with the majority of its revenues coming from Australia and New Zealand. This deal appears to be complimentary to Volution's existing customer base.

Bellway, a leading UK housebuilder, was another of the fund's strongest-performing stock over the period. It's also benefitting from positive sentiment towards the sector. Labour coming into power in the Summer, with a strong commitment to increase housing supply through planning reforms and reintroducing local government targets, has provided a major tailwind to those throughout the construction supply chain. As rates are now beginning to fall, and the UK consumer is in a strengthening position, there is increasing confidence that the housing market is primed for a rebound.

BP, the oil and gas major, was a detractor from performance over the six months. Its shares struggled following softer-than-expected updates alongside a decline in oil price. Looking at the long-term investment opportunity, BP's extensive global operations and upstream assets provide revenue stability while we also see an opportunity for the business to offload lower-returning assets to support returns to shareholders.

Auction Technology Group, the leading online auction platform, also underperformed over the period. It's seeing weaker organic revenue growth due to its industrial and commercial division where lower asset prices and some self-inflicted errors in changing of commission rates led to lower growth expectations.

OUTLOOK

The UK economy is in solid shape. Data announced over the last few months has shown the economy to be gaining momentum, which bodes well for UK companies future growth prospects.

After a shallow recession at the end of 2023, the UK's prospects have u-turned with recent economic results being surprisingly stronger than forecast. Improving UK growth can be seen in the recent, better than expected Gross Domestic Product (GDP) numbers and upwards revisions to expectations for the next two years. Headline inflation is likely to remain close to 2% in the near term and easing price pressures are set to open the door to further rate cuts.

The Bank of England (BoE) has begun its rate cutting journey and this will be warmly welcomed by households and businesses where leverage is a feature. Given the rapid rise in interest rates over the past two years it's important to appreciate that the extent of the impending cuts are likely to be limited. Returning to a period of ultra-low rates is out of the question, barring some significant external event. Market observers continue to expect UK rates to stabilise in 2026, likely in the 3-4% range.

For those with mortgages, banks have already begun pricing in the upcoming rates cuts. The 5-year Sterling Overnight Index Average (SONIA) swap rate, used by UK lenders to price loans, dropped to 3.8% in July. As mortgage repayments represent many households' largest outgoings, these reduced costs will be extremely welcome. Increasing mortgage affordability is also supportive of a strong property market, one that held up reasonably well as rates rose. Little wonder the GfK Consumer Confidence Index reached a 2-year high, albeit it's subsequently pulled back slightly amid concerns around October's budget.

The UK is a consumer economy, and improvements here will be the driving force in Britain's recovery. Consumer spending represents over 60% of GDP and increasing confidence will be supportive of growth. Challenges remain, the consumer is not one homogeneous, carefree group that's ready to spend with the cost-of-living crisis not over for many. However, an increasing proportion of the population is now entering a period of real wage growth, with salary increases outstripping inflation. Moreover, in April 2024, a circa 10% increase in the National Living Wage and a 4% cut to National Insurance were implemented. UK living standards, in aggregate, look to be on a positive trajectory.

Labour appears to have timed their ascent to power well. It's perhaps not quite as positive a backdrop as Tony Blair entered Number 10 to in 1997, but the current nascent economic recovery is a reasonable starting point for the new government to inherit. A stable government reduces medium term political risk but Labour's stated commitment to fiscal prudence, not wanting a repeat of Liz Truss's mini budget debacle, means the UK's near-term outlook won't be drastically altered.

INVESTMENT REVIEW (Continued)

Investors will be closely scrutinising the new governments' 'Growth Plan' as the new UK Chancellor Rachel Reeves has announced a series of measures to unlock GDP growth. Early announcements show a significant focus on planning reform and investment to get Britain building again. This won't happen overnight, and many are sceptical their house building targets will never be reached, However there is already evidence of a rebound in the construction sector with recent figures showing construction grew at the fastest rate in almost a year in May, with house building and infrastructure boosting the industry.

We are only at the foothills of the opportunity. Early-stage shoots of growth, inflation at target, rates cuts; all coupled with UK valuations at historic discounts. The stars are aligning for the UK.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth by more than the FTSE 250 (ex-Investment Trusts) Index over periods of five years after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in the shares of medium-sized companies that are constituents of the FTSE 250 (ex-Investment Trusts) Index and that are incorporated/domiciled in the UK or which have significant business operations in the UK. This will typically be around 30–50 companies.

Other investments

The Fund may also invest in:

- Debt securities or bonds (debt obligations that pay interest) issued by governments, government-related, supranational
 organisations or corporations;
- · Convertible securities (a type of corporate debt security which can be exchanged for shares in the same organisation);
- · Other types of transferable securities;
- Cash and cash equivalents;
- · Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographic locations (where we invest)

The Fund focuses on investment in the UK although the Fund's managers have discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Investment Manager tries to further reduce risk by making sure no single company share dominates the Fund's investments. Normally, the Investment Manager tries to keep shareholdings in any individual company between 1.5% and 5% of the Fund's total value.

The Investment Manager does not intend to invest in every company in the FTSE 250 (ex-Investment Trusts) Index and, while the Investment Manager has the freedom to invest up to 10% of the Fund's assets outside of it, this is rare and typically has been because of changes to an index composition.

Any proportion of the Fund can be invested into specific industry sectors, but the Investment Manager seeks to avoid any unintentional emphasis on a sector in a way that could increase the level of risk.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses environmental, social and governance ("ESG") factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.

INVESTMENT OBJECTIVE & POLICY (Continued)

 Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

This ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in:

- Companies which generate revenue from the production or distribution of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).
- Companies assessed as 'fail' under the UN Global Compact.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie UK Mid Cap Fund (W Accumulation) returned 4.99%, whilst its benchmark - the FTSE 250 ex-Investment Trusts Index - returned 9.03% (both returns in UK sterling).

OVERVIEW

The Summer heralded the start of the next Labour era, and our new government didn't waste any time moving into action. We've already witnessed the normal political positioning of a new government announcing they've inherited a worse financial situation than anticipated. This messaging appears to be more political posturing, an astute play to allow them to claim credit for the future strength of the economy. However, such negative rhetoric has begun to weigh on consumer confidence with many awaiting more details around how the government intend on raising taxes, something they should finally reveal in October's autumn budget.

So far, the market has broadly reacted positively to the Labour victory as can be seen by the strength of sterling versus the dollar and euro. With UK growth having strengthened, sterling has jumped to its highest level against the dollar in almost a year. Sterling strength also has the effect of bearing down on inflation. All this bodes well for the more economically sensitive and domestically focused UK mid and small cap companies. However, the AIM-listed stocks have been performing poorly as speculation around potential tax changes has been rife.

At the beginning of July, the Financial Conduct Authority ("FCA") announced a simplified UK listings regime that has already come into force. This is the biggest change to their listing regime in three decades, with reforms aimed at modernising the rules and making them more flexible and competitive while maintaining high standards of governance and disclosure. However, the changes aren't without some controversy, with some of the governance changes (e.g., dual class share structures) causing concerns for some industry voices. In recent years, the United Kingdom has lost some major listings to the United States, most notably Arm Holdings (ARM) choosing to list on the NASDAQ Index last year. The FCA hope the revised listing rules will encourage increased UK listings, which is important to ensure a vibrant UK small-cap market and which has long-term positive implications across the market-cap spectrum.

On 1 August, the Bank of England ("BOE") announced it was cutting the base rate by 25 basis points to 5%. At the same time, the BOE provided guidance to not expect a flurry of rate cuts as they wish to avoid cutting "too quickly or by too much." September's Monetary Policy Committee ("MPC") reiterated the BOE's commitment to a gradual approach to reducing rates, with the base rate remaining at 5%. This contrasted with the US Federal Reserve's decision of a 50-basis-point rates cut. The key difference in decision making may well lie in the inflation outlook. UK inflation currently remains within range but is experiencing persistently high core inflation, especially via stubborn cost of services. The MPC will likely have further concerns about how global tensions have increased, particularly through Middle Eastern conflicts, increasing the potential for external inflationary pressures. The market is continuing to price in rate cuts over the next 12–18 months.

The fundamentals of the UK economy have been growing from strength to strength. At the end of September, the Organisation for Economic Co-operation and Development ("OECD") updated their growth outlook for the United Kingdom, with growth anticipated to be the joint second fastest in the G7, just after the United States. Regular upwards revisions of UK growth have become a feature of 2024 and something we believe will continue well into 2025. The facts on the ground are at a stark contrast to the new government's message of doom and gloom.

SIGNIFICANT CHANGES

The top five buys during the 6-months period were: Coats Group, Shaftesbury Capital, Safestore, Domino's Pizza Group and DiscoverIE.

The top five sells during the 6-months period were: Londonmetric Property, Spirent Communications, Watches of Switzerland, Redrow and Pets at Home.

POSITIVE/NEGATIVE CONTRIBUTORS

At the sector level, no exposure to banks, chemicals and health care benefited returns. In contrast, an overweight in industrial goods and services and stock selection in financial services and real estate detracted from returns.

At a stock level, the fund's best performing stock over the six months to 30 September 2024 was JTC, provider of administrative services (accounting, regulatory compliance, etc.) to alternative and institutional investors, such as fund managers, private equity firms, pension funds and sovereign wealth funds. JTC's share price has gradually risen over the period reflecting it steadily executing its strategy through a combination of organic growth and complementary acquisitions. In July, it announced a proposed acquisition of FFP, provider of specialist fiduciary services. The market took this announcement positively given JTC's positive acquisition track record combined with an attractive valuation that extends JTC's services into specialist governance services as well as reinforcing its presence in the Cayman Islands, a key territory for the trust and corporate services market.

INVESTMENT REVIEW (Continued)

Defence contractor, Qinetiq was one of the strongest contributors to performance over the period. The Group had lagged the wider sector over the previous twelve months following disappointing financial performance from the Group's largest ever acquisition Avantus. However, the full year results released in the second quarter confirmed a much-improved book to bill ratio of 1.2x and modest sequential growth from Avantus helped buoy the share price. Combined with a favourable market backdrop with further commitments from governments to increase defence spend over the next decade we continue to hold the position.

Vesuvius was the portfolio's largest underperformer over the six months. Vesuvius is a global leader in molten metal flow engineering and technology who specialise in developing and manufacturing high-technology products and solutions primarily for the steel and foundry casting industries. It released results in August that confirmed its end markets remained weak in the first half of the year, the market reacted badly when it revised guidance due to the expectation of prolonged weakness for the remainder of the year. The company continues to identify efficiences and invest in strategic growth initiatives, ensuring it's positioned for when volume recovery finally arrives.

Bodycote, the leading provider of heat treatment and specialist thermal processing services, underperformed over the period. Its share price has been struggling amid negative sentiment that its sales will not be immune from weakening end-markets, which combined with a foreign exchange headwind has seen the sell side trimming forecasts. In the past, Bodycote has effectively managed cyclical pressures by controlling its cost base to protect its earnings, and this will be a test for its relatively recently appointed management team whether they can do the same. We believe Bodycote is a stronger business than it was going into previous downturns, and we anticipate it will come out the other side stronger than its peers. In the meantime, a share buyback is underway at attractive levels to support future shareholder returns.

OUTLOOK

The UK economy is in solid shape. Data announced over the last few months has shown the economy to be gaining momentum, which bodes well for UK companies future growth prospects.

After a shallow recession at the end of 2023, the UK's prospects have u-turned with recent economic results being surprisingly stronger than forecast. Improving UK growth can be seen in the recent, better than expected Gross Domestic Product (GDP) numbers and upwards revisions to expectations for the next two years. Headline inflation is likely to remain close to 2% in the near term and easing price pressures are set to open the door to further rate cuts.

The Bank of England (BoE) has begun its rate cutting journey and this will be warmly welcomed by households and businesses where leverage is a feature. Given the rapid rise in interest rates over the past two years it's important to appreciate that the extent of the impending cuts are likely to be limited. Returning to a period of ultra-low rates is out of the question, barring some significant external event. Market observers continue to expect UK rates to stabilise in 2026, likely in the 3-4% range.

For those with mortgages, banks have already begun pricing in the upcoming rates cuts. The 5-year Sterling Overnight Index Average (SONIA) swap rate, used by UK lenders to price loans, dropped to 3.8% in July. As mortgage repayments represent many households' largest outgoings, these reduced costs will be extremely welcome. Increasing mortgage affordability is also supportive of a strong property market, one that held up reasonably well as rates rose. Little wonder the GfK Consumer Confidence Index reached a 2-year high, albeit it's subsequently pulled back slightly amid concerns around October's budget.

The UK is a consumer economy, and improvements here will be the driving force in Britain's recovery. Consumer spending represents over 60% of GDP and increasing confidence will be supportive of growth. Challenges remain, the consumer is not one homogeneous, carefree group that's ready to spend with the cost-of-living crisis not over for many. However, an increasing proportion of the population is now entering a period of real wage growth, with salary increases outstripping inflation. Moreover, in April 2024, a circa 10% increase in the National Living Wage and a 4% cut to National Insurance were implemented. UK living standards, in aggregate, look to be on a positive trajectory.

Labour appears to have timed their ascent to power well. It's perhaps not quite as positive a backdrop as Tony Blair entered Number 10 to in 1997, but the current nascent economic recovery is a reasonable starting point for the new government to inherit. A stable government reduces medium term political risk but Labour's stated commitment to fiscal prudence, not wanting a repeat of Liz Truss's mini budget debacle, means the UK's near-term outlook won't be drastically altered.

INVESTMENT REVIEW (Continued)

Investors will be closely scrutinising the new governments' 'Growth Plan' as the new UK Chancellor Rachel Reeves has announced a series of measures to unlock GDP growth. Early announcements show a significant focus on planning reform and investment to get Britain building again. This won't happen overnight, and many are sceptical their house building targets will never be reached, however there is already evidence of a rebound in the construction sector with recent figures showing construction grew at the fastest rate in almost a year in May, with house building and infrastructure boosting the industry. We are only at the foothills of the opportunity. Early-stage shoots of growth, inflation at target, rates cuts; all coupled with UK valuations at historic discounts. The stars are aligning for the UK.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY (no longer available for investment)

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to grow in value by more than the FTSE All-Share Index, from a combination of income and investment growth over a three to five-year period after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in the shares of companies listed on the London Stock Exchange that are incorporated/domiciled in the UK or which have significant business operations in the UK. This will typically be around 30–50 companies.

Other investments

The Investment Manager may invest up to 10% of the Fund's assets in Continental European companies, although this has historically been a rare occurrence. The Fund may also invest in:

- Debt securities or bonds (debt obligations that pay interest) issued by governments, government-related, supranational
 organisations or corporations;
- Convertible securities (a type of corporate debt security which can be exchanged for shares in the same organisation);
- Other types of transferable securities;
- · Cash and cash equivalents;
- Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographic location (where we invest)

The Fund focuses on investment in the UK although the Fund's managers have discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund. The Investment Manager does not intend to invest in every company in the FTSE All-Share Index.

The Investment Manager seeks to achieve the growth objective while maintaining volatility (a measure of the size of short-term changes in the value of an investment) at lower levels than that of the FTSE All-Share Index. This often means that the Fund invests in large- or medium-sized companies listed on the London Stock Exchange.

Any proportion of the Fund can be invested into specific industry sectors, but the Investment Manager seeks to avoid any unintentional emphasis on a sector in a way that could increase the level of risk.

The Investment Manager tries to further reduce risk by making sure no single company share dominates Fund investments. Normally, the Investment Manager tries to keep a shareholding in any individual company to between 1.5% and 5% of the Fund's assets.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses environmental, social and governance ("ESG") factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.

INVESTMENT OBJECTIVE & POLICY (no longer available for investment) (Continued)

• Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

This ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

Where the Investment Manager identifies potential violations of UN Global Compact principles, the Investment Manager will establish a structured engagement process with companies to encourage improvement.

The Fund will not invest in companies which generate revenue from the production or distribution of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).

INVESTMENT REVIEW

FTF Martin Currie UK Opportunities Fund closed on 26 July 2024.

¹ The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".

² The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.

³ The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".

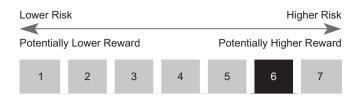

⁴ The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.

⁵ The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.

⁶ The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

^{*} The fund closed on 26 July 2024.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth by more than the FTSE All-Share Index over periods of five years after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in the shares of companies listed on the London Stock Exchange that are incorporated/domiciled in the UK or which have significant business operations in the UK.

Other investments

The Fund may also invest in:

- Debt securities or bonds (debt obligations that pay interest) issued by governments, government-related, supranational
 organisations or corporations;
- Convertible securities (a type of corporate debt security which can be exchanged for shares in the same organisation);
- Other types of transferable securities;
- · Cash and cash equivalents;
- · Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographical location (where we invest)

The Fund focuses on investment in the UK although the Fund's managers have discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund usually invests in 30–50 companies that have grown their dividend in at least 8 of the past 10 years. Typically, most of these investments will be in the shares of large or medium sized companies (such as those making up the FTSE 350 Index).

The Investment Manager will select only those companies from the FTSE All-Share Index that its research suggests will help the Investment Manager to meet the Fund's objective. The Investment Manager does not intend to invest in every company in the FTSE All-Share Index and has the freedom to invest up to 10% of the Fund's assets outside of it.

Any proportion of the Fund can be invested into specific industry sectors, but the Investment Manager seeks to avoid any unintentional emphasis on a sector in a way that could increase the level of risk. The Investment Manager tries to further reduce risk by making sure no single company share dominates Fund investments. Normally, the Investment Manager tries to keep shareholdings in any individual large company to no more than 5% of the Fund's total value, while a shareholding in any individual medium-sized company would typically be between 2% and 2.5% and small-sized companies would typically be no more than 1.5%.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (Environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

This ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

Where the Investment Manager identifies potential violations of UN Global Compact principles, the Investment Manager will establish a structured engagement process with companies to encourage improvement.

The Fund will not invest in companies which generate revenue from the production or distribution of controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie UK Rising Dividends Fund (W Accumulation) returned 6.85%, whilst its benchmark - the FTSE All-Share Index - returned 6.07% (both returns in UK sterling).

OVERVIEW

The Summer heralded the start of the next Labour era, and our new government didn't waste any time moving into action. We've already witnessed the normal political positioning of a new government announcing they've inherited a worse financial situation than anticipated. This messaging appears to be more political posturing, an astute play to allow them to claim credit for the future strength of the economy. However, such negative rhetoric has begun to weigh on consumer confidence with many awaiting more details around how the government intend on raising taxes, something they should finally reveal in October's autumn budget.

So far, the market has broadly reacted positively to the Labour victory as can be seen by the strength of sterling versus the dollar and euro. With UK growth having strengthened, sterling has jumped to its highest level against the dollar in almost a year. Sterling strength also has the effect of bearing down on inflation. All this bodes well for the more economically sensitive and domestically focused UK mid and small cap companies. However, the AIM-listed stocks have been performing poorly as speculation around potential tax changes has been rife.

At the beginning of July, the Financial Conduct Authority (FCA) announced a simplified UK listings regime that has already come into force. This is the biggest change to their listing regime in three decades, with reforms aimed at modernising the rules and making them more flexible and competitive while maintaining high standards of governance and disclosure. However, the changes aren't without some controversy, with some of the governance changes (e.g., dual class share structures) causing concerns for some industry voices. In recent years, the United Kingdom has lost some major listings to the United States, most notably Arm Holdings (ARM) choosing to list on the NASDAQ Index last year. The FCA hope the revised listing rules will encourage increased UK listings, which is important to ensure a vibrant UK small-cap market and which has long-term positive implications across the market-cap spectrum.

On 1 August, the Bank of England (BOE) announced it was cutting the base rate by 25 basis points to 5%. At the same time, the BOE provided guidance to not expect a flurry of rate cuts as they wish to avoid cutting "too quickly or by too much." September's Monetary Policy Committee (MPC) reiterated the BOE's commitment to a gradual approach to reducing rates, with the base rate remaining at 5%. This contrasted with the US Federal Reserve's decision of a 50-basis-point rates cut. The key difference in decision making may well lie in the inflation outlook. UK inflation currently remains within range but is experiencing persistently high core inflation, especially via stubborn cost of services. The MPC will likely have further concerns about how global tensions have increased, particularly through Middle Eastern conflicts, increasing the potential for external inflationary pressures. The market is continuing to price in rate cuts over the next 12–18 months.

The fundamentals of the UK economy have been growing from strength to strength. At the end of September, the Organisation for Economic Co-operation and Development ("OECD") updated their growth outlook for the United Kingdom, with growth anticipated to be the joint second fastest in the G7, just after the United States. Regular upwards revisions of UK growth have become a feature of 2024 and something we believe will continue well into 2025. The facts on the ground are at a stark contrast to the new government's message of doom and gloom.

SIGNIFICANT CHANGES

The top five buys during the 6-months period were: Dunelm, National Grid, Croda International, British American Tobacco and DiscoverIE.

The top five sells during the 6-months period were: Beazley, Spirent Communications, Burberry, Britvic and Rathbones.

POSITIVE/NEGATIVE CONTRIBUTORS

At the sector level, stock selection in food, beverage and tobacco, energy and financial services benefited returns. In contrast, no exposure to banks, underweight in chemicals and stock selection in consumer products and services detracted from returns.

At a stock level, Britvic was the portfolio's strongest performer over the period on the back of being targeted for acquisition. Carlsberg made a bid to buy the soft drinks manufacturer as the Danish brewer looks to further diversify its business outside the beer industry. Its June bid was rejected but a subsequent bid in July was accepted in a deal that will create an enlarged group named Carlsberg Britvic. This is further evidence of the low valuations in the UK equity market as mergers and acquisition activity continues across the market cap spectrum.

INVESTMENT REVIEW (Continued)

St James's Place, the UK-based wealth management company, had a strong six months. This rebound was driven by positive net inflow data during the second quarter of 2024 following a difficult 12-18 months for the company which has seen a reset in fees and provisions made for client servicing failures. We increased the portfolio's exposure to St James's Place as, in our view, the market had overreacted to the negative news flow and the fund was rewarded by greater participation in its rebound. We will continue to observe St James's Place closely with a focus on client retention rate and net flow data.

In contrast, Burberry Group, the British luxury fashion house, had a disappointing period, as comparable store sales fell, particularly in the Asia Pacific region and the Americas. The company now anticipates wholesale revenue for the year to decline by 30% and as a result suspend the dividend to conserve cash. They have brought in a new chief executive officer to attempt to turn around the business but, after great thought, we decided to exit the stock.

Specialist chemicals company Victrex also underperformed in the 12 months to 30 September 2024. Victrex primarily makes a high-performance polymer known as PEEK, which is used in various applications across aerospace, automotive and industrial end markets. The company has faced challenges in key markets due to prolonged destocking of inventories which has led to a decline in volumes and profitability. We think the business should start to see volume improvements across end markets as inventory levels across the value chain get back to normal. In the meantime, the business has shown early success in trials across its medical division and should benefit from increased PEEK content in Electric Vehicles relative to traditional automotives.

OUTLOOK

The UK economy is in solid shape. Data announced over the last few months has shown the economy to be gaining momentum, which bodes well for UK companies future growth prospects.

After a shallow recession at the end of 2023, the UK's prospects have u-turned with recent economic results being surprisingly stronger than forecast. Improving UK growth can be seen in the recent, better than expected Gross Domestic Product (GDP) numbers and upwards revisions to expectations for the next two years. Headline inflation is likely to remain close to 2% in the near term and easing price pressures are set to open the door to further rate cuts.

The Bank of England (BoE) has begun its rate cutting journey and this will be warmly welcomed by households and businesses where leverage is a feature. Given the rapid rise in interest rates over the past two years it's important to appreciate that the extent of the impending cuts are likely to be limited. Returning to a period of ultra-low rates is out of the question, barring some significant external event. Market observers continue to expect UK rates to stabilise in 2026, likely in the 3-4% range.

For those with mortgages, banks have already begun pricing in the upcoming rates cuts. The 5-year Sterling Overnight Index Average (SONIA) swap rate, used by UK lenders to price loans, dropped to 3.8% in July. As mortgage repayments represent many households' largest outgoings, these reduced costs will be extremely welcome. Increasing mortgage affordability is also supportive of a strong property market, one that held up reasonably well as rates rose. Little wonder the GfK Consumer Confidence Index reached a 2-year high, albeit it's subsequently pulled back slightly amid concerns around October's budget.

The UK is a consumer economy, and improvements here will be the driving force in Britain's recovery. Consumer spending represents over 60% of GDP and increasing confidence will be supportive of growth. Challenges remain, the consumer is not one homogeneous, carefree group that's ready to spend with the cost-of-living crisis not over for many. However, an increasing proportion of the population is now entering a period of real wage growth, with salary increases outstripping inflation. Moreover, in April 2024, a circa 10% increase in the National Living Wage and a 4% cut to National Insurance were implemented. UK living standards, in aggregate, look to be on a positive trajectory.

Labour appears to have timed their ascent to power well. It's perhaps not quite as positive a backdrop as Tony Blair entered Number 10 to in 1997, but the current nascent economic recovery is a reasonable starting point for the new government to inherit. A stable government reduces medium term political risk but Labour's stated commitment to fiscal prudence, not wanting a repeat of Liz Truss's mini budget debacle, means the UK's near-term outlook won't be drastically altered.

Investors will be closely scrutinising the new governments' 'Growth Plan' as the new UK Chancellor Rachel Reeves has announced a series of measures to unlock GDP growth. Early announcements show a significant focus on planning reform and investment to get Britain building again. This won't happen overnight, and many are sceptical their house building targets will never be reached, However there is already evidence of a rebound in the construction sector with recent figures showing construction grew at the fastest rate in almost a year in May, with house building and infrastructure boosting the industry.

We are only at the foothills of the opportunity. Early-stage shoots of growth, inflation at target, rates cuts; all coupled with UK valuations at historic discounts. The stars are aligning for the UK.

¹ The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".

² The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.

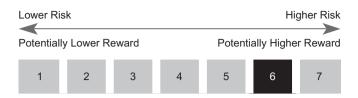

³ The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".

⁴ The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.

⁵ The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.

⁶ The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth by more than the Numis Smaller Companies ex-Investment Trusts Index over periods of five years after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in shares of smaller companies which are constituents of the Numis Smaller Companies ex-Investment Trusts Index or are listed on the Alternative Investment Market (AIM) exchange and that are incorporated/domiciled in the UK or which have significant business operations in the UK.

Other investments

The Fund may also invest in:

- Other types of transferable securities;
- · Cash and cash equivalents;
- Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographical location (where we invest)

The Fund focuses on investment in the UK although the Fund's managers have discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Investment Manager does not intend to invest in every company in the Numis Smaller Companies ex-Investment Trusts Index or AIM but using its expertise and research, select around 40–50 companies it believes will achieve the Fund's objective.

The Investment Manager tries to further reduce risk by making sure no single company share dominates the Fund's investments. Normally, the Investment Manager tries to keep shareholdings in any individual company between 1% and 5% of the Fund's total value.

Any proportion of the Fund can be invested into specific industry sectors, but the Investment Manager seeks to avoid any unintentional emphasis on a sector in a way that could increase the level of risk.

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

INVESTMENT OBJECTIVE & POLICY (Continued)

This ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system, and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in:

- Companies which generate revenue from the production or distribution of controversial weapons (I.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).
- Companies assessed as 'fail' under the UN Global Compact.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie UK Smaller Companies Fund (W Accumulation) returned 6.69%, whilst its benchmark - the Numis Smaller Companies ex-Investment Trusts Index - returned 10.57% (both returns in UK sterling).

OVERVIEW

The Summer heralded the start of the next Labour era, and our new government didn't waste any time moving into action. We've already witnessed the normal political positioning of a new government announcing they've inherited a worse financial situation than anticipated. This messaging appears to be more political posturing, an astute play to allow them to claim credit for the future strength of the economy. However, such negative rhetoric has begun to weigh on consumer confidence with many awaiting more details around how the government intend on raising taxes, something they should finally reveal in October's autumn budget.

So far, the market has broadly reacted positively to the Labour victory as can be seen by the strength of sterling versus the dollar and euro. With UK growth having strengthened, sterling has jumped to its highest level against the dollar in almost a year. Sterling strength also has the effect of bearing down on inflation. All this bodes well for the more economically sensitive and domestically focused UK mid and small cap companies. However, the AIM-listed stocks have been performing poorly as speculation around potential tax changes has been rife.

AIM stocks currently qualify for business relief (formerly business property relief), which can reduce the value of these shares for inheritance tax purposes by up to 100% if held for at least two years. There is speculation this relief could be removed, leading to some downwards pressure on the market. Given the portfolio has a significant overweight to the dynamic AIM, we have acted to reduce this exposure in advance of the upcoming budget to manage near-term risk.

At the beginning of July, the Financial Conduct Authority (FCA) announced a simplified UK listings regime that has already come into force. This is the biggest change to their listing regime in three decades, with reforms aimed at modernising the rules and making them more flexible and competitive while maintaining high standards of governance and disclosure. However, the changes aren't without some controversy, with some of the governance changes (e.g., dual class share structures) causing concerns for some industry voices. In recent years, the United Kingdom has lost some major listings to the United States, most notably Arm Holdings (ARM) choosing to list on the NASDAQ Index last year. The FCA hope the revised listing rules will encourage increased UK listings, which is important to ensure a vibrant UK small-cap market and which has long-term positive implications across the market-cap spectrum.

On 1 August, the Bank of England (BOE) announced it was cutting the base rate by 25 basis points to 5%. At the same time, the BOE provided guidance to not expect a flurry of rate cuts as they wish to avoid cutting "too quickly or by too much." September's Monetary Policy Committee ("MPC") reiterated the BOE's commitment to a gradual approach to reducing rates, with the base rate remaining at 5%. This contrasted with the US Federal Reserve's decision of a 50-basis-point rates cut. The key difference in decision making may well lie in the inflation outlook. UK inflation currently remains within range but is experiencing persistently high core inflation, especially via stubborn cost of services. The MPC will likely have further concerns about how global tensions have increased, particularly through Middle Eastern conflicts, increasing the potential for external inflationary pressures. The market is continuing to price in rate cuts over the next 12–18 months.

The fundamentals of the UK economy have been growing from strength to strength. At the end of September, the Organisation for Economic Co-operation and Development ("OECD") updated their growth outlook for the United Kingdom, with growth anticipated to be the joint second fastest in the G7, just after the United States. Regular upwards revisions of UK growth have become a feature of 2024 and something we believe will continue well into 2025. The facts on the ground are at a stark contrast to the new government's message of doom and gloom.

SIGNIFICANT CHANGES

The top five buys during the 6-months period were: Foxtons, TT Electronics, Bloomsbury Publishing, M&C Saatchi and HostelWorld Group.

The top five sells during the 6-months period were: Fintel, Jet2, Bodycote, Alpha Group International and Keystone Law.

POSITIVE/NEGATIVE CONTRIBUTORS

At the sector level, stock selection consumer products and services and no exposure to health care and energy benefited returns. In contrast, stock selection in technology and travel and leisure and an overweight to industrial goods and services detracted from returns.

INVESTMENT REVIEW (Continued)

At a stock level, the funds largest contributor to returns over the six months to 30 September 2024 was LBG Media, the global entertainment platform managing brands such as Lad Bible and Unilad. The company is positioned to capitalise on the shift from traditional media to easily accessible social and online media, with a global growth strategy. Their most recent expansion into the US has been via their purchase of Betches Media, LLC in late 2023 and, more recently, they have announced a significant advertising deal with NBCUniversal's streaming service, Peacock. LBG Media have continued to execute on its growth strategy and this is being taken well by the market.

Speedy Hire Plc, the leading tool hire company, was one of the fund's largest contributors to returns over the period. The company released results in June in which the dividend was maintained at the previous year's level despite challenging market conditions signaling confidence in the future. The company separately announced they have secured a significant contract with Amey Group Services, one that should create revenue of up to £25 million per year. This alongside the £40m of annualised contract wins from the previous year underpins market forecast for the company. With a less difficult market backdrop we will see the benefit of the 'Velocity' strategy where the business has taken strategic actions to increase its competitive position through investing in a digital and ESG led strategy. Like many UK listed smaller companies the shares trade at a material discount to its own long-term average valuation, with value also underpinned by over 20% discount to asset value and strong cash generation.

The fund's largest detractor over the six months was Tracsis, software provider for the transport industry. The company relies on central and local government spending, which were on hold in the run up to the election causing near term reduction in revenue. The market reacted badly to this, but it is only a short-term issue, and we are focused on the long-term opportunity ahead of Tracsis. It has a dominant position in the UK rail software market and a growing opportunity in the North American rail software market. Tracsis has a proven track record of organic growth and strategic acquisitions and has a robust balance sheet with no debt and ample cash to fund future growth.

Auction Technology Group, the leading online auction platform, also underperformed over the period. It's seeing weaker organic revenue growth due to its industrial and commercial division where lower asset prices and some self-inflicted errors in changing of commission rates led to lower growth expectations. However, we remain confident as the company benefits from a network effect, as more buyers and sellers attract each other to its platform, creating a virtuous cycle of growth and value creation.

OUTLOOK

The UK economy is in solid shape. Data announced over the last few months has shown the economy to be gaining momentum, which bodes well for UK companies future growth prospects.

After a shallow recession at the end of 2023, the UK's prospects have u-turned with recent economic results being surprisingly stronger than forecast. Improving UK growth can be seen in the recent, better than expected Gross Domestic Product (GDP) numbers and upwards revisions to expectations for the next two years. Headline inflation is likely to remain close to 2% in the near term and easing price pressures are set to open the door to further rate cuts.

The Bank of England (BoE) has begun its rate cutting journey and this will be warmly welcomed by households and businesses where leverage is a feature. Given the rapid rise in interest rates over the past two years it's important to appreciate that the extent of the impending cuts are likely to be limited. Returning to a period of ultra-low rates is out of the question, barring some significant external event. Market observers continue to expect UK rates to stabilise in 2026, likely in the 3-4% range.

For those with mortgages, banks have already begun pricing in the upcoming rates cuts. The 5-year Sterling Overnight Index Average (SONIA) swap rate, used by UK lenders to price loans, dropped to 3.8% in July. As mortgage repayments represent many households' largest outgoings, these reduced costs will be extremely welcome. Increasing mortgage affordability is also supportive of a strong property market, one that held up reasonably well as rates rose. Little wonder the GfK Consumer Confidence Index reached a 2-year high, albeit it's subsequently pulled back slightly amid concerns around October's budget.

The UK is a consumer economy, and improvements here will be the driving force in Britain's recovery. Consumer spending represents over 60% of GDP and increasing confidence will be supportive of growth. Challenges remain, the consumer is not one homogeneous, carefree group that's ready to spend with the cost-of-living crisis not over for many. However, an increasing proportion of the population is now entering a period of real wage growth, with salary increases outstripping inflation. Moreover, in April 2024, a circa 10% increase in the National Living Wage and a 4% cut to National Insurance were implemented. UK living standards, in aggregate, look to be on a positive trajectory.

Labour appears to have timed their ascent to power well. It's perhaps not quite as positive a backdrop as Tony Blair entered Number 10 to in 1997, but the current nascent economic recovery is a reasonable starting point for the new government to inherit. A stable government reduces medium term political risk but Labour's stated commitment to fiscal prudence, not wanting a repeat of Liz Truss's mini budget debacle, means the UK's near-term outlook won't be drastically altered.

INVESTMENT REVIEW (Continued)

Investors will be closely scrutinising the new governments' 'Growth Plan' as the new UK Chancellor Rachel Reeves has announced a series of measures to unlock GDP growth. Early announcements show a significant focus on planning reform and investment to get Britain building again. This won't happen overnight, and many are sceptical their house building targets will never be reached, however there is already evidence of a rebound in the construction sector with recent figures showing construction grew at the fastest rate in almost a year in May, with house building and infrastructure boosting the industry.

We are only at the foothills of the opportunity. Early-stage shoots of growth, inflation at target, rates cuts; all coupled with UK valuations at historic discounts. The stars are aligning for the UK.

¹ The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".

² The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.

³ The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".

⁴ The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.

⁵ The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.

⁶ The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

FTF Martin Currie US Unconstrained Fund

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least 80% of its assets in shares of US companies.

Exposure to these shares will typically be direct (purchasing the relevant shares themselves) but may also be indirect (gaining exposure to the shares through other investments). Indirect investments include:

- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation).
- Depositary receipts (a type of listed security which enables investors to hold shares in foreign companies).
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

Other investments

The Fund may also invest in:

- · Cash and cash equivalents; and
- · Money market instruments;

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or costs and/or generate extra income or growth). However, the Fund can introduce more speculative investment use of derivatives in the future on 60 days' notice to investors. The Fund will not take short positions (a technique where investors seek to profit from decreases in value of securities, indices, currencies and/or index rates). Use of derivatives is typically expected to be limited.

Geographic location (where we invest)

The Fund's focus is the US. The majority of the Fund's investments will be in shares in companies listed in the US, although the Fund's managers have discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund typically invests in shares of around 20-40 companies of any size, industry or market capitalisation, although the Investment Manager may invest in fewer or more companies where it considers this to be in the interests of the Fund.

The Fund invests in companies which, in the opinion of the Investment Manager:

- have the potential to generate a return on invested capital where the return is higher than the cost of capital; and
- have the potential to develop an attractive growth profile and/or cash flow generation.

In assessing potential investments, the Investment Manager evaluates the companies for the above characteristics and assesses a company's value by looking at a wide range of financial and economic factors at the level of the relevant company, its sector and the broader economy (a fundamental approach). The Investment Manager focuses on forecasting a company's potential growth and returns, based on research and due diligence and using the Investment Manager's proprietary research platform.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns.

These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk. Investments with a governance or sustainability risk rating of 4 or above will not be selected for the portfolio. The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in:

- Companies which generate more than 5% of revenue from tobacco production, distribution or wholesale trading.
- Companies which generate revenue from the production or distribution of controversial weapons (I.e. antipersonnel mines, nuclear weaponry, biological and chemical weaponry and cluster munitions).
- Companies which generate more than 5% of revenue from the production or distribution of conventional weapons.
- Companies which generate more than 5% of revenue from the production or distribution of fossil fuels.
- Companies which generate revenue from mining of metals and minerals as defined by GICS sub-industries Diversified Metals and Mining, Copper, Gold and Precious Metals and Minerals.
- Companies generating more than 5% revenue from coal based power generation or the mining or distribution of thermal coal.
- Companies that generate 15% or more of their revenues from nuclear power generation.
- · Companies assessed as 'fail' under the UN Global Compact.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Martin Currie US Unconstrained Fund (W Accumulation) returned -5.34%, whilst its benchmark - the MSCI USA (Net Dividends) Index - returned 3.59% (both returns in UK sterling).

OVERVIEW

US equity markets delivered strong positive returns over the 6-month period ending September 30, 2024. After posting decent gains over the first half of the period, the markets witnessed several bouts of volatility in the latter half.

At the start of the period, sentiment was buoyed by the overall resilient economic data across the US. Weaker US economic data, a rate hike from the Bank of Japan, and thin summer liquidity then impacted stocks globally in the later part of the period. However, the long-anticipated start of the US Federal Reserve's (Fed) rate cutting cycle in September soothed investor concerns and drove markets higher into the end of the period.

On the monetary policy front, the European Central Bank cut its interest rate by a cumulative 50 basis points over the period. In September, the Fed lowered rates by an unusually large 50 basis points (bps), essentially shifting its focus from containing inflation to support a softening US economy.

During the April—June quarter, US large-cap tech companies dominated market leadership, buoyed by continued enthusiasm for artificial intelligence. In terms of style, Growth outperformed Value in the US.

In the latter half of the 6-month period, against the context of rate cuts and better-than-feared economic prospects, rate-sensitive sectors performed strongly. Growth stocks rose but to a lesser extent than Value.

SIGNIFICANT CHANGES

At the end of the period, the portfolio's largest sector exposures are information technology and healthcare.

Our largest sector exposures reflect our high conviction in the seismic thematic shifts which bring structural opportunities and disruptions. We believe these can offer attractive investment returns, as part of our mega-trends assessment, and proprietary thematic analytical framework.

Technology: new technologies such as artificial intelligence (AI), technological and geopolitical fragmentation, cloud computing and cyber security, and robotics, automation and AI are key themes which we have identified as having strong investment opportunity. Our exposure to information technology as a whole is reflective of the high conviction in companies which are well placed to benefit from these themes.

Healthcare: a key theme we have identified as an investment opportunity is ageing populations. A trend towards an ageing population leads to an increased incidence of diseases. One of the themes that this fuels is what we have labelled the 21st Century diseases, which are diabetes, obesity and cancers. These are to some extent co-morbidities, related to either lifestyle and/or simple ageing. Such rapid rise in disease incidence requires an increase in healthcare infrastructure in general, which we define in the broad sense of the term, i.e. comprising both physical healthcare infrastructure, such as hospitals, but also more investment in drug development and production, as well as more demand for medical technology in general.

Over the period we bought Copart, DexCom, Eli Lilly and Apple. We exited Nike.

DexCom is a med-tech provider of leading-edge constant glucose monitoring for the management and control of diabetes and blood sugar levels. We believe that DexCom is well positioned to benefit from increasing incidence of diabetes, which gives rise to large and structurally growing markets. This should allow them it to generate strong growth, and high and expanding return-on-capital (ROIC). Eli Lilly is a pharmaceutical company, the global #2 in diabetes and obesity, with potentially the leading largest pipeline in of Alzheimer's and obesity drugs, making it the only pharmaceutical name exposed to the two emerging mega blockbuster categories.

Copart is a leading vehicle auction platform (operating in a duopoly market) for written-off vehicles in the US and increasingly on an international basis, with a strong ROIC and growth profile. Their competitive advantage has grown over many years through building and consolidation of an extensive physical and localised network of recovery centres, which in turn makes them the destination of choice to get access to such vehicles at scale. Finally, Apple is a leading global brand for technology products that generates high returns on invested capital and attractive growth. Apple's products are priced at a premium to peers due to the company's brand value in product design and user experience. We expect the digital and real world only to become more integrated through time, with Apple's products as a key interface. We see upside opportunities in Virtual/Augmented Reality and AI, and believe the company should enter an earnings upgrade cycle as AI features are released.

We exited Nike given the weaker-than-expected growth. We believe that its product innovation will take longer to manifest in results, and we face risks of further downgrade.

INVESTMENT REVIEW (Continued)

POSITIVE/NEGATIVE CONTRIBUTORS

At a stock level, the US Information Technology firm Nvidia was the biggest contributor to performance, followed by Constellation, the software company, and Zoetis, the US animal health company.

The largest detractors were Dexcom, a healthcare company, and Estee Lauder, the cosmetics company.

At a sector level, Information Technology contributed positively to performance, while Healthcare and Consumer detracted the most in absolute terms.

OUTLOOK

Risk of persistent inflationary pressure: Looking to the rest of 2024, we continue to highlight the risk of a stickier and longer-lasting inflation, given ongoing elevated wage inflation, deglobalisation, technological and geopolitical fragmentation, and energy transition. For the remainder of the year and into 2025, the ongoing focus will be inflation—a key determinant of monetary policies. The market will remain on inflation watch, which will continue to fuel both volatility and the debate on timing of interest rate cuts.

Synchronised pivot in central banks: Central banks shifting their monetary policies towards rate cuts should be supportive for risky assets, and for Quality Growth stocks in our view. With the Fed making its first (in four years) and unusually large 50 bps cut in rates in September, the market is now looking at significant rate cuts over the next 12 months, which could be supportive for risky assets, signalling the start of an easing monetary policy cycle. The focus of the market will now be on whether the magnitude of cuts expected over the next 12 months is overly optimistic—this will become known only with each inflation and jobs data print, which could keep the market volatile for the time being.

Economic slowdown remains our central scenario: In the next 12 months, another source of risk is whether we are in the late economic cycle and approaching a point of higher risk of recession or whether the economic momentum can remain well oriented. We see an ongoing risk of slowdown in economic growth and maintain our probability of recession at c.35–40% (i.e., not a central scenario, but not a negligible risk. Ultimately, when an economic slowdown is met with interest rate cuts, equity markets should be somewhat supported.

Corporate earnings growth likely pedestrian: The corporate earnings growth picture remains mixed. Earnings momentum has turned positive, but this is helped mainly by Technology and Communications, whilst other sectors have weaker growth and estimates downgrades. We increased our top-down earnings growth forecasts slightly, which remain below consensus. Valuation discipline critical: from a regional perspective, European and Asian equities offer more valuation support relative to history and other developed market equities. We are focusing on attractive valuations on stock-specific and case-by-case basis. At this stage, we continue to find more attractively valued Quality Growth opportunities outside the US.

Political and geopolitical risks remain high: Notably, the upcoming US presidential elections bring an element of higher uncertainty on policy direction.

As long-term investors, we are invested in some attractive structural growth trends around AI, Energy Transition and Ageing Population, which offer good long-term prospects, although we believe it is critical to maintain valuation discipline to capture the pockets of these themes that still have valuation support. We do see signs of froth emerging, notably in the AI theme, and have been selectively positioned in areas where we can find strong support from fundamentals and valuations.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

COMPARATIVE TABLES (Continued)

* The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least 80% of its assets in the shares and preference shares of smaller companies (i.e. those with market capitalisations not greater than that of the largest company in the Russell 2000 Index (the "Index") at the time of its most recent reconstitution) headquartered in the U.S. Preference shares are shares where dividends are paid out in advance of dividends due to other shares in the company.

Other investments

The Fund may also invest in:

- Other shares, preference shares, convertible bonds (a type of corporate debt security which can be exchanged for shares in the same organisation), other debt securities and warrants, each of which are issued by companies in any jurisdiction and of any size;
- · Cash and cash equivalents;
- · Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). Derivatives are investments whose value is linked to another investment or the performance of another variable factor, such as interest rates, currencies of any country or indices. The Fund may introduce more speculative use of derivatives in the future, on 60 days' notice to investors.

Geographical location (where we invest)

The Fund's focus is the US. The majority of the Fund's assets will be invested in shares and preference shares of companies headquartered in the US, although the Investment Manager has discretion to invest in any other country to a lesser extent.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

The Fund typically invests in shares of fewer than 100 companies.

The Fund does not intend to replicate the issuer, sector and industry composition or weightings of the Index. The issuer, sector and industry composition and weightings of the Fund's portfolio are likely to vary considerably from those of the Index. To the extent the Fund is more heavily invested in a particular issuer, sector or industry relative to the Index, its performance may be tied more directly to the success or failure of a relatively smaller or less well-diversified group of portfolio holdings than that of the Index. The Fund may also include shares of companies which are not included in the Index.

The Investment Manager seeks to invest in companies which it believes possess excellent business strengths or prospects, high internal rates of return and whose securities are trading significantly below the Investment Manager's estimate of their current worth. In addition, the Investment Manager looks for companies which it considers have an attractive financial profile, including companies with: (i) conservative balance sheets with low leverage; (ii) prudent capital allocation; and (iii) attractive reinvestment opportunities.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

In selecting investments, the Investment Manager also assesses material ESG factors. The Investment Manager defines material ESG factors as those that it believes may impact a company's cash flows, balance sheet, reputation, and/or enterprise value. This assessment enables the Investment Manager to determine whether a company's ESG profile poses a material risk or creates an opportunity for investment for the Fund. These material ESG factors may include:

- Environmental factors, including a company's pollution / hazardous waste policies, water usage and climate change policies.
- Social factors, including a company's approach to labour relations, supply chain, and data protection.
- Governance factors, including a company's approach to shareholder rights, accounting standards, remuneration, and board structure.

The Investment Manager's assessment of a company's ESG characteristics may impact its view of that company's financial valuation, risk profile, and attractiveness. Where the Investment Manager identifies areas that do not meet its expectations on adequately managing material ESG issues, the Investment Manager will engage with companies to encourage improvement. The Investment Manager's evaluation of ESG risks is only one component of its assessment of potential investments for the Fund and, as with its consideration or other factors and risks, may not be a determining factor in any decision to purchase, sell, or hold an investment for the Fund. In addition, in evaluating material ESG factors for the Fund, the analysis given to such ESG factors will vary across different types of investments, sectors, industries, regions, and company size and maturity.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Royce US Smaller Companies Fund (W Accumulation) returned -4.77%, whilst its benchmark - the Russell 2000 Index - returned -0.46% (both returns in UK sterling).

SIGNIFICANT CHANGES

During the six-month period, much of the Fund's activity was in existing names, adding to high conviction holdings that declined for what we believe are temporary concerns rather than structural changes to the companies' ability to generate above average returns on invested capital (ROIC). Enovis, Marcus & Millichap, Bio-Techne Corporation, and MKS Instruments were the largest purchases in the period due to price weakness in each company. We reduced our stake in real estate investment company, Kennedy-Wilson Holdings, consulting services business, Korn Ferry, infrastructure products and solutions company, Arcosa, ESCO Technologies, which produces engineered products and systems for industrial and commercial markets worldwide through three segments: Aerospace & Defense, Utility Solutions Group, and RF Test & Measurement, and Dun & Bradstreet, which provides data and analytics solutions that it delivers to inform commercial credit decisions and other related services.

Five new names were added: Axcelis Technologies is a semiconductor capital equipment company that holds a strong number two market position providing systems for ion implantation, a critical step needed to create electrical properties in chips. Visteon Corporation is a Tier 1 supplier of the digital instrument clusters that display basic operating information and infotainment controls in passenger vehicles. Visteon is the global share leader yet still has a promising runway for growth because only about one-third of new vehicles built last year came with a digital cluster. The company has ramped up new product development over the past few years in order to expand its content per vehicle, with three key incremental growth drivers. M/I Homes builds single-family homes primarily in the Midwest and Southeast U.S. The company has a low-debt balance sheet, steady cash flows, and strong earnings. Nextracker is a global market leader of intelligent solar tracker and software solutions. Skyward Specialty Insurance Group offers general liability, excess liability, professional liability, commercial auto, group accident and health, property, surety, and workers' compensation insurance products.

Four positions were sold off in the six-month period: Hudson Technologies, Northwest Pipe, Ryerson Holding, and UFP Technologies.

POSITIVE/NEGATIVE CONTRIBUTORS

Four of the Fund's 10 equity sectors contributed to performance for the six-month period. Industrials led by a wide margin, followed by Real Estate and Financials. The largest negative impacts came from Consumer Discretionary, Communications Services, and Information Technology. At the industry level, real estate management & development (Real Estate), machinery (Industrials), and biotechnology (Health Care) contributed most, while the top detractors were health care equipment & supplies (Health Care), interactive media & services (Communication Services), and building products (Industrials).

At the position level, Kennedy-Wilson Holdings was the top contributor. Kennedy-Wilson invests directly in commercial real estate, primarily apartment buildings, while also deriving fee income from its growing investment management platform. Its stock fell 29% in the first quarter, in part due to the company incurring another significant downward fair value adjustment for properties in its investment management vehicles, which investors extrapolated to its on-balance sheet holdings. The fair value adjustment is non-cash, however, and we believe, based on our discussions with management, it largely reflects higher assumed cap rates due to the rise in interest rates as opposed to any deterioration in property-level cash flows. The company has already made solid progress on its plan to reduce costs by \$15-\$20 million and generate at least \$500 million in cash from non-core asset sales over the next 18 months. Its shares rebounded 15% as the company continued to make progress on its non-core asset sales plan and reduced its high dividend, both consistent goals in reducing debt. The company also reemphasized its pivot to growing its Investment Management segment. As the latter scales, we believe the shift to an asset light, more predictable income stream and higher return model should cause the company's overall valuation multiple to continue being re-rated upward, though we trimmed our stake in the six-month period as its share price was climbing.

Enovis Corporation was the top-detracting position. Enovis is an orthopedic-focused medical technology company with leading a global market share in its Prevention & Recovery segment, which includes braces and rehabilitation products, as well as a growing Reconstruction segment that includes surgical implants for extremities. Its stock has been under pressure since Enovis closed its largest acquisition earlier this year, including a 28% drop in 2Q24. The strategic fit as well as the valuation of the deal made sense to us, but near-term integration is always a risky process, especially with new leadership in Enovis's Reconstruction segment. Investors appear to be waiting for evidence that product line rationalization, salesforce integration, cost synergies, and, ultimately, revenue growth from cross selling the combined company's product are materializing consistent with management's expectations.

The Fund's disadvantage versus the Russell 2000 was due to stock selection, which hurt most in Consumer Discretionary, Communication Service, and Financials; in the third sector our lower weighting and lack of exposure to banks also detracted from relative results. Conversely, the portfolio's much lower weighting in Energy was additive versus the benchmark, as was stock selection in both Real Estate and Industrials.

INVESTMENT REVIEW (Continued)

OUTLOOK

The Fund's biggest sector weights at the end of September were Industrials—which was substantially overweight compared to the benchmark—Information Technology, and Consumer Discretionary, with the last of these also having a higher weighting than the Russell 2000. It is too soon to tell if small-cap's outperformance versus large-cap in 3Q24 is a short-term "risk on" rally or the long-awaited onset of a sustained small-cap leadership cycle driven by reversion to the mean. In either scenario, it is common for low quality factors to initially drive small-cap performance. Given Premier's disciplined focus on owning quality companies--those with high returns on invested capital, consistent free cash flow, and strong balance sheets--underperformance in the quarter was not surprising. Several sectors and industries where we rarely find companies with superior economics fueled the benchmark's performance, including banks, utilities, and biotechnology. As we have seen in several previous small-cap leadership cycles, however, the low-quality bounce often wanes within the first year before giving way to quality factors that assume long-term leadership and outperform. Many of the Fund's detractors in the quarter reflect stock price underperformance from positions that were multi-year outperformers and/or were down due to cyclical or macro concerns, as opposed to any deterioration in the business' long-term cash flow and earnings power. While many investors often react to underperformance by chasing winners, a key differentiator of our Strategy is the long-term investment horizon inherent in taking a business buyer's approach. This enables the Fund to arbitrage time by adding to existing names or buying new high-quality holdings when their valuations contract due to short-term sentiment that often overshadows attractive and sustainable long-term value creation drivers.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

COMPARATIVE TABLES (Continued)

* The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth by more than the MSCI Emerging Markets (Net Dividends) Index over periods of five years after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investment

The Fund invests at least two thirds (but typically significantly more) in emerging markets (countries whose economy and financial markets are still developing). The Fund typically invests in shares of around 60–80 companies of any size or industry that:

- Are listed on an emerging markets stock exchange, or
- Are domiciled or conduct a significant proportion of their business in emerging markets, or
- Receive a significant amount of their revenues from emerging markets.

To a lesser extent, the Fund may also invest in frontier markets, these are markets that are at earlier stages of their economic and financial market development than emerging markets.

Other investments

The Fund may also invest in:

- Other transferable securities including fixed interest and other debt related securities;
- Cash and cash equivalents;
- Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). However, the Fund can introduce more speculative use of derivatives in the future on 60 days' notice to investors. Derivatives are financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies).

Geographic location (where we invest)

The Fund has a focus on investments in emerging markets. Up to one third of the Fund's portfolio could be invested outside of emerging markets.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Managers do not copy a benchmark when selecting investments for the Fund.

The Investment Managers use research and experience to identify companies that show more potential to deliver sustainable growth over the long-term (5 years) than their market price would suggest.

The Fund's portfolio may include some overlap with the Index but does not intend to replicate it and may vary considerably. The Fund may include shares and countries that are not included in the MSCI Emerging Markets (Net Dividends) Index.

Typically, to help manage risk, the Investment Managers aim to keep exposure to any single company in a range of 5% more or less than the Index and industry and country exposure in a range of 10% more or less than the MSCI Emerging Markets (Net Dividends) Index.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

The Investment Managers assess ESG factors that could impact the ability of an issuer to generate future sustainable returns. Examples of these ESG factors could include:

- Environmental factors, which can include issues such as resource efficiency, carbon emissions management, waste prevention and recycling and pollution prevention and control.
- Social factors, which can include issues such as labour standards, fair wages, diversity and gender balance, health and safety
 practices and product safety.
- Governance considerations, which can include issues such as appropriate accounting practices, alignment of interests, board
 effectiveness, capital allocation, shareholder rights and quality of disclosures.

These ESG factors are used to inform the Investment Managers' assessment of the wider attractiveness of each potential investment. The Investment Manager also uses the results of these assessments to inform its strategy for engagement with companies included in the portfolio where applicable. The Investment Managers track and monitor investments against ESG criteria and in some cases will engage actively with issuers to seek improvements in ESG factors, both directly in discussions with management and via the exercise of shareholder voting rights.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Templeton Global Emerging Markets Fund (W Accumulation) returned 6.92%, whilst its benchmark - the MSCI Emerging Markets ("EM") (Net Dividends) Index - returned 7.51% (both returns in UK sterling).

OVERVIEW

EM equities broadly advanced over the six-month period under review. However, under the surface of positive performance, a spate of volatility marked the period, making it a challenging environment for equities. Elections in key EM countries (where the extent of the winning parties' victories led to some surprises), a change in investor sentiment towards artificial intelligence ("Al") and an intensification of geopolitical tensions added onto concerns of a recession in the United States. The latter was tempered by optimism about the US Federal Reserve's potential interest-rate cut, which eventually came to fruition.

SIGNIFICANT CHANGES

In the last six months, the portfolio increased its holdings in South Africa, the United Arab Emirates and Thailand as we continued to identify companies that, in our analysis, have sustainable earnings power and are trading at a discount to their intrinsic worth. In terms of sectors, additions were undertaken in consumer staples, utilities and health care.

We added new companies into our existing high-conviction portfolio holdings through the initiation of investments in Budweiser Brewing APAC (engaged in the brewing and distribution of beer and has a strong and diversified product portfolio spanning more than 50 brands in China, South Korea, India and the Association of Southeast Asian Nations markets) and Kuaishou Technology (operates a leading short video platform in China). For Budweiser Brewing APAC, while the two key markets of South Korea and China provide good cash flows and have room for premiumisation, there is a long runway for volume growth in India, where premium beer penetration is at a low level. Furthermore, we continued to build our position in SK Hynix, a South Korean semiconductor company that makes memory chips used globally across a wide range of solutions. The strong growth of the AI chip market has led to an increase in demand for high-bandwidth memory ("HBM") chips, in which SK Hynix currently has a leadership position. We also added onto our existing holdings in Discovery and in Minor International, one of Thailand's leading hotel operators. Discovery is South Africa's biggest health insurance provider, and it also offers banking and investment services. Additionally, the company has international insurance operations in the United Kingdom and partners with other insurance companies through its shared-value insurance model called Vitality. There was also a net purchase of HDFC Bank, India's leading private sector bank.

The Fund reduced its investments in China/Hong Kong, Taiwan and India in favour of opportunities that we found more compelling. Sectors that experienced the largest sales were information technology, consumer discretionary and financials.

We sold off our holdings in Unilever, a UK-based global consumer goods company that generates a significant amount of sales in EMs. We also reduced our exposure to several semiconductor stocks. These included Taiwan Semiconductor Manufacturing Company ("TSMC"), the world's largest semiconductor foundry company, and Samsung Electronics, one of the largest memory semiconductor manufacturers in the world. We trimmed TSMC to manage its active weight in the portfolio after a rally in its share price. While we are still positive on Samsung Electronics' prospects and the company remains one of the fund's largest positions, we rotated slightly into SK Hynix, given the latter's current leadership in HBM products. Other trims included Tencent Holdings (provider of leading online games and communication platform in China) and Alibaba Group Holding (leading e-commerce company in China).

POSITIVE/NEGATIVE CONTRIBUTORS

The fund posted a gain in the six months ended 30 September 2024. From a relative perspective, the Fund's positive return slightly trailed that of the benchmark index over the period under review.

The largest relative detractors at the sector level were information technology, communication services and industrials, mainly due to stock selection. An overweight allocation in the information technology sector pressured relative returns further. The detraction in the information technology sector was led by the portfolio's holding in Samsung Electronics. The company also manufactures a wide range of consumer and industrial electronics and equipment. Its share price has been volatile during the period due to investor concerns about a weaker memory cycle in the near term, as well as the company's loss of leadership in advanced memory products. However, we expect the weakness in the memory cycle to be short lived, as demand for HBM should remain strong and conventional dynamic random-access memory ("DRAM") products should see supply tightness as capacity shifts to HBM. Elsewhere, Grupo Financiero Banorte, a leading financial institution in Mexico, was also a notable detractor. Its share price fell alongside the general Mexican equity market as investors feared adverse constitutional reforms and regulatory changes in the country. We continue to monitor the country's government policies and reforms and their potential impact on corporate earnings. However, we do remain optimistic on Mexico's prospects and see it as a key beneficiary of nearshoring of global supply chains for the US market.

INVESTMENT REVIEW (Continued)

Another detractor was NAVER, a South Korean internet search and advertising company. It also has business interests in e-commerce, financial services and entertainment content. Its share price weakened as a result of a combination of factors, including weaker growth for its market, competition for both its advertisement and e-commerce business, underwhelming response to its generative AI technology, and uncertainty about the benefits from its AI investments. The company's data-leak issue with the messaging application Line in Japan and potential implications on its business interest, along with NAVER's shareholding in Line, also pressured the share price. We remain positive on NAVER's business execution and expect the company to potentially continue to deliver fairly steady growth over the medium term. Its leadership position in AI solutions in South Korea, in our view, should provide the company with additional cost efficiencies and revenue opportunities.

Focusing on countries, stock selection in South Korea, Brazil and Mexico, together with overweight allocations in South Korea and Brazil, led these countries to top detractor status relative to the benchmark.

On a sector basis, stock selection in the consumer discretionary, consumer staples and financials sectors were key drivers of relative performance. An underweight allocation in the consumer staples sector and an overweight allocation in the financials sector provided further support to the fund, with respect to the benchmark. An off-benchmark holding in Prosus served the portfolio well. Prosus is a leading global investment company and the largest shareholder of Tencent Holdings (also held by the fund), a Chinese technology company. Its share price tracked Tencent's stock, which initially rose following the company's release of its second-quarter 2024 earnings results and subsequently amid a slew of stimulus measures in China. Tencent's second quarter saw revenue that was in line with consensus expectations and profit that exceeded consensus estimates. Finishing higher over the six-month period were shares of Chinese e-commerce company Alibaba Group Holding. Its share price received support from investor expectations that the company could be included in the Hong Kong Stock Connect later this year and that the company's new strategy to charge merchant service fees could potentially boost its revenue. Furthermore, China's stimulus measures to boost the country's economy and equity market provided a strong boost to Alibaba's share performance near the end of September 2024. Alibaba remains a key holding in the fund's China exposure. The company continues to generate strong cash flows, in our assessment, and we expect share-price appreciation to be supported by corporate actions, including share buybacks.

Another strong contributor was Discovery, South Africa's biggest health insurance provider. It also offers banking and investment services. Additionally, the company has international insurance operations in the United Kingdom and partners with other insurance companies through its shared-value insurance model called Vitality. Its share price advanced after it announced higher-than-expected earnings per share for its fiscal-year 2024 and provided a positive outlook.

At the country level, stock selection in China and Taiwan, coupled with a lack of exposure to Saudi Arabia, spurred these countries to top contributor status relative to the benchmark.

OUTLOOK

On balance, we retain our optimism for the rest of 2024. Tailwinds within EMs remain—interest-rate cuts, strong demand for semiconductors due to Al applications, and what we consider reasonable valuations in most EMs—may negate some key risks such as geopolitical tensions, a meaningful economic slowdown in the United States and continued weakness in China's demand.

Interest-rate cuts, in our view, are catalysts for growth, supporting both consumption and corporate earnings. Brazil's central bank raised its key interest rate in September; in contrast with the policy decisions of other countries' central banks. However, we believe that it would eventually follow the global trajectory. While Mexico's judicial reforms have affected investor sentiment recently, in our view, corporate earnings should remain intact.

Sustained demand growth from AI applications, in our assessment, should be beneficial for South Korea and Taiwan, which are home to several large semiconductor companies. While this is potentially beneficial for the earnings growth of these corporations, we believe that this growth opportunity has not been reflected in valuations of some of the beneficiary companies. Conversely, while India has continued to see good economic growth and remains a bright spot, equity valuations remain an utmost concern for us. While end demand in China could remain weak for a longer period, base effects could potentially prove helpful for earnings growth in 2025. China's equity market rallied in the last week of the quarter, supported by stimulus measures announced by the government. However, the weaker economic growth outlook in China has led to our selective approach; our key holdings in China are in internet companies that have given us comfort with their cash flows and shareholder returns.

Now, just as then, we remain focused on bottom-up investing. We continue to retain our investment approach and seek opportunities across markets, focusing on companies that, in our analysis, have long-term earnings power. We have built considerable expertise in the EM equity asset class, which we believe gives us the ability to identify investment opportunities before many of our peers.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.

³ The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".

⁴ The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.

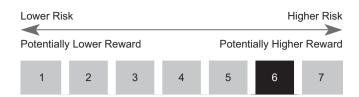

⁵ The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.

⁶ The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

COMPARATIVE TABLES (Continued)

* This share class launched on 30 April 2021.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to increase in value through investment growth by more than the MSCI All Country World (Net Dividends) Index over periods of five years after all fees and costs are deducted.

There is no guarantee that the Fund will achieve this return over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund will invest at least two thirds (but typically significantly more) in the shares of a range of companies anywhere in the world that the Fund's portfolio management team regard as established leaders.

Other investments

The Fund may also invest in:

- Shares in companies that the Investment Manager considers are "emerging leaders" up to a maximum of 30% of the Fund.
- Other transferable securities (including bonds and other debt securities);
- Cash and cash equivalents;
- Money market instruments;
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes; and
- Derivatives (financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices or currencies). These derivatives include, but are not limited to, futures, currency forwards and options).

The Fund uses derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth. within the Fund's existing risk profile), as well as for more speculative investment purposes, to help achieve the Fund's investment objective. It is anticipated that where the Fund uses derivatives for speculative purposes, this will be limited to part of the overall strategy.

Geographical location (where we invest)

The Fund can invest anywhere in the world.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Managers do not copy a benchmark when selecting investments for the Fund.

"Established leaders" are companies with dominant market positions, strong competitive advantages, high quality management, solid balance sheets, and positive returns on capital in growing industries that show potential to deliver sustainable growth over the long term (5 years) than their market price would suggest. This includes how growth may be affected by environmental, social or governance risks and opportunities.

Companies which are "emerging leaders" are in earlier stages of growth that the team believe will become established leaders over time. No more than 30% of the Fund's total value will typically be invested in shares of companies that the Investment Managers consider to be emerging leaders.

Typically, the number of holdings in the Fund will vary between 25-35 companies' shares but the Fund may hold up to 50 companies' shares. These holdings will typically be the shares of companies that have a market capitalisation of over \$10bn. However, the Fund may also invest in companies with market capitalisations of between \$1bn and \$10bn.

The Fund's portfolio may include some overlap with the MSCI All Country World (Net Dividends) Index but does not intend to replicate it and may vary considerably. It seeks to manage risk by avoiding any unintentional emphasis on a single company, industry or country.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social and governance factors)

In selecting investments, the Investment Manager also assesses ESG factors that could impact the ability of an issuer to generate future sustainable returns. These may include:

- Environmental factors, such as a company's environmental practices, greenhouse gas emissions, energy efficiency initiatives and climate risk.
- Social factors such as a company's approach to community relations, occupational health and safety, reliability and pricing of services and gender diversity.
- Governance factors such as the governance structure of the company, management incentives, corporate governance risk, data security and the Fund's alignment with management, board and other shareholders of the company.

The ESG assessment is quantitative and qualitative, using the Investment Manager's proprietary ESG rating system and its direct research and engagement process. The proprietary ESG assessment captures forward looking analysis. Investments are assigned a risk rating based on the Investment Manager's assessment of ESG factors. Investments are assigned a score of 1 to 5 in respect of each of governance and sustainability (meaning environmental and social factors), with 5 denoting high risk.

The Investment Manager's assessment of a company's ESG characteristics may impact the Investment Manager's view of that company's financial valuation and attractiveness.

Where the Investment Manager identifies areas that do not meet expectations of best practice on material governance or sustainability issues, the Investment Manager will engage with companies to encourage improvement.

The Fund will not invest in companies which produce controversial weapons (i.e. antipersonnel mines, biological and chemical weaponry and cluster munitions).

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, Templeton Global Leaders Fund (W Accumulation) returned -2.57%, while its benchmark—the MSCI All Country World (Net Dividends) Index—returned 3.29%, both in UK-sterling terms.

OVERVIEW

Global financial markets experienced bouts of heightened volatility during the six months ended 30 September 2024, but global bonds and stocks generally advanced for the period. Although June political developments in Europe pressured results in that region, enthusiasm about artificial intelligence ("AI"), an interest-rate cut in the eurozone, and investor expectations for potential UK and US rate cuts during the second half of 2024 aided investor sentiment during the year's second quarter. Financial markets worldwide experienced significant volatility in early August following a rate hike by the Bank of Japan ("BoJ"), as well as the release of a weaker-than-expected employment report in the United States, which led to recession fears. However, markets rebounded as resilient economic reports and a continued disinflation trend in the United States reignited hopes for an economic soft landing. Interest-rate cuts by the US Federal Reserve ("Fed"), the European Central Bank ("ECB"), the People's Bank of China ("PBoC") and other central banks further bolstered investor confidence. Global manufacturing activity contracted for the third consecutive month in September, while services activity continued to expand across regions.

In the United States, key indexes advanced during the six-month period, with the S&P 500 and Dow Jones Industrial Average both reaching new highs multiple times, especially in September. US equities benefitted from Al-related fervour but were pressured in July by a rotation away from large-capitalisation technology-related stocks. After bouncing back, US equities declined again in early August as investors worried about a potential recession with the releases of weaker-than-expected July employment and manufacturing reports. However, generally solid economic data and corporate earnings reports, along with a moderating annual inflation rate, eased concerns. In September, a robust interest-rate cut from the Fed—its first cut in more than four years—further bolstered US stocks. Annual inflation, as measured by the core personal consumption expenditures price index, ticked higher in August but had hit the lowest rate in over three years in June and July. The country's gross domestic product ("GDP") expanded in the second quarter at a significantly faster annualised rate than in the prior quarter. Manufacturing activity contracted in September for the sixth successive month, while services activity expanded for the third consecutive month.

In Europe, stocks collectively advanced for the six months under review, as investor concerns about the French, UK and German elections and the eurozone's sluggish economic growth were more than offset by the ECB's and the Bank of England's ("BoE's") interest-rate cuts and a weaker US dollar. In economic data, the eurozone's GDP grew at a slower rate sequentially in the second quarter than in the previous quarter. The currency bloc's manufacturing activity contracted in September, as it has for more than two years, while its services activity expanded in September for the eighth consecutive month. Following nine months of holding the rate at a two-decade high, the ECB cut its policy rates at its June meeting and again at its September meeting, reflecting confidence in returning inflation to its target rate. In the United Kingdom, GDP grew sequentially in the second quarter at a slower pace than in the prior quarter, while manufacturing activity expanded in September for the fifth consecutive month. The BoE cut its key bank rate in August for the first time in more than four years but left it unchanged at its September meeting, indicating that it might reduce the bank rate over the next few months as it expects inflation to move towards its target in late 2025.

In Asia, stocks generated positive returns in UK-sterling terms and collectively outperformed stocks in other regions during the six months under review. Chinese and other Asian stocks benefitted from the PBoC's implementation of significant monetary stimulus to boost China's economic growth. After cutting the one-year loan prime rate ("LPR") and the five-year LPR to record lows in July, the PBoC in September reduced the cash reserve requirement for banks to the lowest level since early 2007, cut existing mortgage rates and injected liquidity into the stock market, among other measures. In economic data, China's GDP grew sequentially in the second quarter at a slower rate than in the previous quarter, while manufacturing activity in September contracted for the fifth consecutive month. In Japan, stocks fell significantly in early August as the BoJ's interest-rate hike at July-end and investor concerns about a potential US recession led to the unwinding of the Japanese-yen carry trade, which had been dependent on borrowing the yen at a low cost to purchase potentially higher-return assets. However, the subsequent easing in these factors and less hawkish comments from BoJ officials led Japanese stocks to begin rebounding, paring their losses in Japanese-yen and UK-sterling terms for the six-month period. The country's GDP returned to growth in the second quarter, but manufacturing activity contracted in September for the third consecutive month. After raising its benchmark interest rate in July for the second time in 2024, the BoJ left it unchanged in August and September.

SIGNIFICANT CHANGES

During the six months under review, the fund's top five purchases (by monetary value of transactions) were Adobe, Apple, AstraZeneca, Airbus and Wells Fargo. The latter four of these five positions were newly initiated during the period; Adobe was added to the portfolio in March 2024 and the position was expended in subsequent months. In contrast, the top five sales during the period were Rolls-Royce Holdings, Applied Materials, Salesforce, Target and American Express. Four of these positions, aside from Rolls-Royce, have been closed.

INVESTMENT REVIEW (Continued)

These trades reflected our consistent approach of investing in what we regard as quality and growth companies at favourable valuations, while paying attention to risk/reward adjustments. We added said companies—all best-in-class businesses with strong fundamentals, robust growth profiles and proven management—and bolstered the portfolio at reasonable prices, in our view. At the same time, we trimmed or exited positions that had become fairly valued, based on our estimates; we also shifted capital away from companies with delayed or diminishing investment cases, creating the flexibility to act on higher-conviction ideas.

For more information on our portfolio positioning and stock selection, please see the sections below.

POSITIVE/NEGATIVE CONTRIBUTORS

The fund underperformed its benchmark over the six months ended 30 September 2024, when stock selection in the information technology (IT) and financials sectors detracted from relative performance.

Overall, the fund—with its quality-growth orientation—was not fully aligned with the rotations and gains driven by the start of a global monetary easing cycle this past quarter. We have made various risk/reward adjustments among positions that have reached our estimates of their fair value or when their investment theses have deteriorated, but we stay disciplined and will refrain from chasing near-term central bank policy tailwinds. We are confident that our approach of investing in high-quality, leaders-type companies at what we consider to be favourable prices can create long-term value for clients.

In attribution terms, IT holdings Salesforce and Apple were among the significant detracting stocks, due mainly to allocation effects. We have exited Salesforce on strength and added a new position in the iPhone maker. While our analysis shows that Apple's recent valuation is above its historical average, we believe there are multiple catalysts ahead to warrant the stock price. For instance, the recent launch of new AI-enabled iPhones heralded another major upgrade cycle and may help sales in China bottom out. Sustained revenue growth in the services segment further underpins the company's outlook. Additionally, we think Apple's strong cash flow and balance sheet could continue to support its commitment to shareholder returns. Meanwhile, IT underperformed the broader market during the third quarter as investors turned cautious regarding the sector's potentially overstretched valuations, with many shifting their capital to value and small-capitalisation stocks, which are perceived beneficiaries of interest-rate cuts. Against this backdrop, we have been active in adjusting our technology-related allocations to reflect our strongest convictions and shift capital for portfolio balance. We exited Applied Materials and initiated a new position in NVIDIA, among other decisions. However, our sector positioning has not materially changed. Our IT-related portfolio is geared towards holdings that, in our view, may provide high-quality growth exposure to the megatrends shaping the modern digital world, such as AI, cloud, Internet of Things, and software as a service. IT remains the fund's largest sector exposure by weighting.

We added three new financials positions during the period, including US banks Bank of America and Wells Fargo. We initiated both stocks in the third quarter, at a time when banking stocks were pressured by concerns that US banks may see weaker interest income as the Fed kicked off its policy easing cycle. We do not share that view, and our decisions here clearly illustrates our bottom-up investment approach and research expertise. For instance, focusing on fundamentals, we believe Wells Fargo has a best-in-class credit quality, which should hold firm as long as the US labour market remains relatively resilient. We also like its compelling capital return policies and share buyback track record. Additionally, we believe a few interest-rate cuts may bode well for banks in terms of reining in deposit costs, which had escalated in the previous hiking cycle.

The top detracting stock during the period was ICON in the health care sector. One of our top 10 holdings, ICON is a provider of contract clinical research (CRO) services. We continue to like ICON as a favourably priced defensive growth position benefitting from a high-quality management and the CRO industry's positive long-term outlook. In our view, tailwinds in the CRO space include a solid 5% year-on-year growth in research and development spending globally, along with a steady incremental growth of CRO outsourcing penetration rate. More broadly, health care remains a high-conviction sector for the fund, and we stay invested in our core holdings as they provide a defensive growth bulwark to the fund at what we consider favourable valuations. We have raised our health care weighting during the period, as we added AstraZeneca to the fold; on balance, we have closed the position in Zimmer Biomet Holdings.

In contrast, communication services was the top contributing sector due to stock selection; an underweight allocation in the energy sector also aided relative performance. The top contributing stock in the communication services sector was T-Mobile US. We reinitiated a position in the US telecommunication services major in the first half of 2024 and the move has proven to be rewarding thus far despite heightened market volatility. We believe T-Mobile US is well-positioned to raise prices and potentially win market share, as the company benefits from superior 5G spectrum assets following the integration with Sprint. Meanwhile, with the completion of the integration and the unlocking of cost synergies, T-Mobile US now beckons with robust free cash flow generation and capital return. As of June 2024, the company still has US\$8.7 billion of authorised share buybacks and dividends for the rest of the year.

INVESTMENT REVIEW (Continued)

At the stock level, the top two contributors during the period under review were GE Vernova and Rolls-Royce Holdings in the industrials sector. We have in recent months trimmed the Rolls-Royce position on strength. However, the jet engine maker remains a top 10 holding in the portfolio, favoured as a high-quality business with a strong balance sheet and robust free cash flow generation, as well as improving revenue growth and operating margin. We also like its well-managed defence division, an area that we view positively amid elevated geopolitical uncertainties. As for GE Vernova—the US-based power systems manufacturer and services provider is a market leader whose equipment produces roughly 30% of the world's electricity. We believe it is well-positioned for the structural growth tailwinds of electrification and decarbonisation trends, as well as rising energy demand driven by Al and data centres. Strong cash generation through its servicing businesses and potential for a profit-margin turnaround adds to the investment case. Rolls-Royce and GE Vernova are clear examples of the kind of quality growth exposure on which the fund focuses—industry or market leaders with the ability to sustain earnings, generate cash and stay competitive in various market conditions.

OUTLOOK

The fourth quarter is historically a favourable period for global and US equities, which have already climbed a wall of worry to post double-digit percentage gains from January through September-end, with signs of a gradual widening of market advances. At the same time, the macro outlook is becoming more conducive, with interest-rate cuts by the Fed, the ECB and the PBoC marking the onset of a global monetary easing cycle. We may see more durable economic expansion going forward, which should pave the path for an earnings recovery and support the value of risk assets.

Nonetheless, we will temper this optimism with attention towards a range of uncertainties. Key among them is the upcoming US presidential election. The race to the White House remains tight, and the outcome may have a major impact on global trade policies and domestic taxes in the United States. Intensifying geopolitical conflicts, if left unchecked, may disrupt the global flow of goods and services, while any reversal in the disinflationary trends may cause central banks to rethink the path of policy easing, adding headwinds to the market. At this point, consensus estimates are still indicating a low-teen percentage earnings growth for global equities in 2024 and 2025. Keeping in mind the factors discussed above, we do not think earnings growth is set in stone. This will in turn challenge us to be cautious of elevated valuations, especially in the US market, which commands a roughly 60% premium over the rest of the world, based on our analysis.

We continue to believe that a balanced portfolio comprising undervalued, dominant franchises with robust free cash flow growth, as well as firms with high normalised free cash flow yields and improving fundamentals, is prudent at this stage of the market cycle. Our consistent focus on these "leaders"—both established and emerging—underpins a distinct positioning that may sometimes go against the near-term market narratives surrounding macro data and policies, causing relative underperformance or outperformance. That was why, in the third quarter, we were not positioned for the breadth of interest-rate cuts globally, or China's surprise stimulus measures. However, we believe it is impractical to attempt to chase these shifting narratives, as market participants may have already moved on to new themes by the time the existing ones are fully understood.

Instead, our investment success hinges on our ability to identify companies that are undervalued relative to their intrinsic quality and capacity to grow free cash flow per share across any interest-rate environment. This has been the overarching theme across our additions and rotations over the period. We aim to tune out market noises and focus on quality and value—this is the discipline that will continue to anchor our investment approach as the market reaches a potential inflection point.

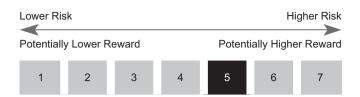

Peter Sartori, Warren Pustam, CFA, Alan Chua, CFA & Ferdinand Cheuk, CFA Fund Managers 30 September 2024

COMPARATIVE TABLES As at 30 September 2024

W Accumulation	30 September 2024	31 March 2024	31 March 2023	31 March 2022

Lowest share price	376.80	304.55	273.66	288.81

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to generate income and increase in value through investment growth over periods of five years or more after all fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund will invest at least two thirds (but typically significantly more) in:

- Debt securities or bonds, (a type of debt obligation) issued by governments, government-related, supranational organisations and corporations in any industry, anywhere in the world, including China.
- Derivatives (financial contracts whose value is linked to another investment or the performance of another variable factor, such
 as interest rates, currencies of any country or indices). The types of derivatives used include but are not limited to: options,
 futures, forward currency contracts, credit default swaps, interest rate swaps, total return swaps and contracts for difference.

Other investments

The Fund may also invest in:

- Bonds whose value is secured by mortgages or other assets (mortgage or asset-backed securities);
- Convertible bonds (a type of corporate debt security which can be exchanged for shares in the same organisation);
- Structured products (a type of fixed-term investment whose payout depends on the performance of something else, such as another security or currency);
- · Other transferable securities;
- Cash and cash equivalents;
- Money market instruments; and
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund uses derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth within the Fund's existing risk profile), as well as for more speculative investment purposes, to help achieve the Fund's investment objective. It is anticipated that where the Fund uses derivatives for speculative purposes, this will be limited to part of the overall strategy.

Geographical location (where we invest)

The Fund can invest anywhere in the world.

How we select investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund. The Investment Manager has the freedom to choose securities that their research indicates have the strongest potential to meet the Fund's objective.

The Fund will typically limit exposure to bonds that are rated as below investment grade (below BBB- by Standard & Poor's or Baa3 by Moody's) to no more than 50% of the total portfolio. These bonds generally pay a high yield (interest rate) but are considered by rating agencies to be lower quality and carry more risk than investment grade bonds.

The Fund can also invest in distressed securities (those whose issuers may be in or close to bankruptcy or administration), but still present diverse opportunities to grow in value.

INVESTMENT OBJECTIVE & POLICY (Continued)

ESG (environmental, social, and governance) factors

As part of the overall research process for government debt issuers, the Investment Managers assess ESG factors using a proprietary rating methodology which incorporates ratings from third party providers alongside the Investment Manager's own views. Assessment includes consideration of forward-looking analysis to determine where conditions are anticipated to improve or deteriorate over the medium term. ESG factors include the following (which may change over time):

- Environmental factors, such as resource insecurity, extreme weather risk and unsustainable practices;
- · Social factors such as social cohesion & stability, infrastructure, health security, labour, human capital, and demographics.
- Governance factors such as business climate, institutional strength, corruption & transparency, policy mix and reform mindedness and effectiveness.

These ESG factors are used to inform the Investment Manager's wider assessment of the investment worthiness of a particular government issuer. The Investment Managers typically give preference to investments with either a higher ESG rating or ESG ratings which are projected to be neutral or improving, although a low ESG rating will not automatically result in exclusion from the portfolio, if the Investment Manager considers the investment to be sufficiently attractive.

For corporate issuers, the Investment Manager does not always assess ESG factors. When the Investment manager does look at ESG factors, they use ESG ratings sourced from third party providers (such as MSC) to inform their assessment of the investment worthiness of the issuer.

The Fund does not automatically exclude any particular investment from the portfolio based solely on its ESG assessment (where undertaken). Whilst an ESG assessment will always be performed on bonds issued by governments, bonds issued by corporates will not always be assessed.

INVESTMENT REVIEW

PERFORMANCE

For the 6 months ended 30 September 2024, the FTF Templeton Global Total Return Bond Fund (W Accumulation-H3) returned 5.98% (in UK sterling), whilst its benchmark - the Bloomberg Multiverse Index - returned 5.86% (in US dollars).

OVERVIEW

The six months under review solidified the shift to a downward phase in the cycle of global central bank monetary policy rates, as a number of developed market central banks joined those among emerging markets who had already been cutting interest rates for some time. The early mover central banks in Latin America and some in eastern Europe were well into their downward cycles during the period, and in some cases were at or near the end of those cycles. The European Central Bank first reduced its policy rate in June 2024, and by September had cut its repo rate by a total of 85 basis points ("bps") to 3.65%. The US Federal Reserve cut the federal funds target rate by 50 bps to a 4.75%–5.00% range in September. Most developed market central banks, other than those in Australia and Norway, had eased by September-end, while Asian central banks were still mostly paused at this stage. The Bank of Japan ("BoJ") is a notable outlier as the Japanese economy has gained strength, and it has started to gradually tighten its monetary policy. It had exited its negative interest-rate policy by raising rates to 0.1% in March 2024, and it raised rates again to 0.25% in July.

This global downward trend in interest rates has been enabled by ongoing disinflation. The deceleration in prices was, however, much more gradual during the six-month reporting period, sometimes with occasional setbacks as some food and energy prices began rising again. Nonetheless, by September 2024 a number of countries had recorded inflation rates back inside their central bank targets, while others had made significant progress on this front. US Consumer Price Index ("CPI") inflation eased to 2.5% year-over-year ("y/y") in August 2024, from 3.5% y/y in March 2024 and a peak of over 9% during 2022. Euro area ("EA") inflation had fallen from its 2022 high of 10.6% y/y to 2.4% y/y by March 2024, then slowed further to an estimated 1.8% y/y as at September 2024. Core inflation in these key regions also slowed over these time periods. Similar inflation trends have been seen across much of the globe. A notable exception is Japan, where higher inflation has taken hold amid a strengthening economy. Annual Japanese headline CPI reached 3.0% in August 2024, compared to 2.7% in March 2024. These numbers represent a significant shift from readings that were mostly under 2% since the mid-1980s until the post-pandemic period.

With these developments in inflation and policy rates, most sovereign bond yields in developed and emerging markets fell over the period under review, with a handful of exceptions. In the United States, the 10-year US Treasury note's yield fell by 42 bps over the period to end September at 3.78%. In Europe, the benchmark 10-year German Bund yield fell by 18 bps to 2.12% over the half year. Most other European yields—across the EA, as well as developed and emerging Europe—fell too, with the exceptions of France and the United Kingdom, both of which had snap elections called during the period. In Japan, the 10-year government bond yield rose following the rate rises mentioned above and the ending of yield curve control in March; it ended the half year 13 bps higher at 0.85%. Earlier in the period, it had breached the 1% level for the first time since 2012. Sovereign bond yields fell in most of the rest of the Asia-Pacific region, while they were mixed in Latin America.

The US dollar ("USD") declined over the period, with the DXY dollar index falling by 3.7%. Most of this decline took place in the latter half of the period, as US rate cuts shifted from expectations to reality. Among major currencies, the euro gained 3.2% against the USD over the period, UK sterling 6.0% and the Japanese yen 5.3%. Other developed market currencies that appreciated against the USD included the Australian dollar (6.1%), New Zealand dollar (6.2%) and Norwegian krone (2.8%). Asian currencies were also generally stronger against the USD, although most Latin American currencies were weaker.

Recent data has continued to support the likelihood of a global soft landing for growth. The International Monetary Fund's ("IMF's") July World Economic Outlook projects global growth at 3.2% this year and 3.3% next year. The IMF expects emerging markets to show the strongest growth, at 4.3% in both 2024 and 2025, while advanced economies are projected to grow 1.7% this year and 1.8% in 2025. (There is no assurance that any forecast, estimate or projection will be realised.)

SIGNIFICANT CHANGES

The top five buys during the six-month period were:

- Japan Treasury Discount Bill, 0.000%, 20/08/2025
- United States Treasury Notes, 3.875%, 30/04/2025
- Republic of South Africa Government Bond 9.000% 31/01/2040
- Republic of South Africa Government Bond 8.500% 31/01/2037
- Malaysia Government Bond 3.885% 15/08/2029

The top five sells during the six-month period were:

- Indonesia Treasury Bond, 7.000%, 15/02/2033
- German Treasury Bill, 0.000%, 18/09/2024

INVESTMENT REVIEW (Continued)

- Thailand Government Bond, 0.750%, 17/09/2024
- Thailand Government Bond, 1.000%, 17/06/2027
- Asian Development Bank, 11.750%, 24/07/2024

POSITIVE/NEGATIVE CONTRIBUTORS

For the six-month period ended 30 September 2024, interest-rate strategies contributed to the Fund's relative outperformance. Overall credit exposures and currency positions had largely neutral effects on relative results.

The Fund maintained duration exposures primarily in select emerging markets, and also had duration exposures in select developed markets. Overweighted duration exposure in South Africa contributed to relative performance.

Among credit exposures, the Fund's overweighted exposure to sub investment-grade sovereign credits contributed to relative return, while underweighted exposure to investment-grade corporate bonds and other spread sectors detracted.

Among currencies, overweighted positions in the Mexican peso, Brazilian real and Colombian peso detracted from relative results, as did the Fund's underweighted exposure to the euro. However, overweighted positions in the Malaysian ringgit and Australian dollar contributed to relative performance.

OUTLOOK

We broadly expect inflation to continue declining towards target ranges, though the path may be a little uneven from here, and it may remain above target for a while yet in a number of countries. The sharp falls in inflation seen since the pandemic-era peaks have enabled most central banks across the globe to shift gears from prior tightening, though idiosyncratic dynamics have meant a variety of timing differences—some central banks (all among emerging markets) started reducing rates months back, a few have started more recently, and others have yet to cut. A notable exception to the global inflation downtrend is Japan, where the BoJ has now begun to normalise policy in response to reflationary conditions.

While global inflation trends are generally promising, certain countries remain more vulnerable to inflation dynamics and weaker fundamentals. We are also concerned by the fiscal outlook in certain countries, even as others are continuing to improve from pandemic-induced fiscal loosening. We therefore continue to closely monitor idiosyncratic factors in different countries; heterogeneity in fundamentals and policy responses should create relative valuation opportunities among countries.

We have for some time now expected the USD to enter a depreciating cycle. We anticipate that both cyclical factors and structural factors should lead to USD weakness, although the path has been and is likely to remain uneven. This outlook means that we believe the greatest areas of value in the sovereign bond markets are to be found in non-USD assets, with specific investments selected based on individual country fundamentals. We emphasise that we see this as a medium-term trend that is only just starting to materialise—we do not envisage the USD move to be merely a short-term bounce and retracement.

On a regional basis, we think various countries in the Asia-Pacific region look attractive. Cyclical and structural factors are expected to bolster a number of Asian bonds and currencies. Cyclical factors include interest-rate cycles/differentials, which should lead to USD weakness. Structural factors include current account surpluses, better fiscal management and stronger growth potential. Looking ahead, we expect Asia to remain an important driver of global growth.

In Latin America, the prudent policies that certain countries have followed in recent years, particularly those involving proactive monetary policy combined with fiscal reforms and progress, have made select countries here attractive to us. Some have passed fiscal measures that should lead to improvement over the medium term. Several Latin American countries have also exhibited significant fiscal improvement since the pandemic. Additionally, Mexico's geographic location has made it an attractive destination for nearshoring activity by companies based in the United States.

Geopolitics will continue to impact the markets in various ways. The post-COVID new normal for the world has been characterised by the constant shadow of various geopolitical factors. We continue to closely monitor these factors, including tensions between the US and China and between Taiwan and China, and the paths of the war between Russia and Ukraine and the conflict in the Middle East.

Michael Hasenstab, Ph.D & Calvin Ho, Ph.D Fund Managers 30 September 2024

¹ The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".

² The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.

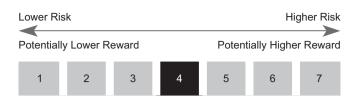

³ The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".

⁴ The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.

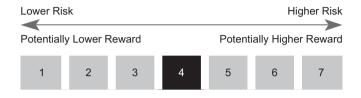

⁵ The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.

⁶ The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.

RISK PROFILE (W Income Shares) As at 30 September 2024

RISK PROFILE (W Accumulation - H3 Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

INVESTMENT OBJECTIVE & POLICY (no longer available for investment)

WHAT THE FUND AIMS TO DELIVER (FUND OBJECTIVE)

The Fund aims to grow in value from a combination of income and capital growth, in excess of SONIA Compounded Index + 3.5%, over rolling five year periods, before fees and costs are deducted.

There is no guarantee that the Fund will achieve its objective over this or any other time period. Capital invested is at risk and you may get back less than you paid in.

WHAT THE FUND CAN INVEST IN (INVESTMENT POLICY)

Core investments

The Fund invests at least 80% of its assets in debt securities or bonds (a type of debt obligation) issued anywhere in the world, including emerging markets (countries whose economy and financial markets are still developing), in each case which are denominated in Sterling or hedged back to Sterling. These securities can include:

- Bonds or debt securities issued by governments, government-related or supranational organisations, or corporate issuers, including loans.
- Convertible bonds (a type of corporate bond which can be exchanged for shares in the same organisation).
- Bonds whose value is secured by mortgages or other assets with a return dependent on the cash flow or interest arising from such assets (mortgage or asset-backed securities).
- Securities which are indexed to inflation (inflation-protected securities).
- Debt securities that do not pay interest but instead trade at a significant discount and which are redeemed at maturity for the full face-value (zero-coupon bonds).
- Written orders or agreements to pay fixed sums of money either at a pre-determined date or on demand (bills of exchange, banker's acceptances and promissory notes).

Other investments

The Fund may also invest up to 10% of the portfolio in:

- Shares in companies which are acquired as a result of a corporate action or as part of a company restructure, or conversion via
 convertible bonds (a type of corporate debt security which can be exchanged for shares in the same organisation), and
 preference shares (shares where dividends are paid out in advance of dividends due to other shares in the Company);
- Other collective investment schemes (which may include collective investment schemes operated by the ACD or any of its associates). The Fund may not invest more than 10% in other collective investment schemes.

The Fund may also invest in:

- Other non-Sterling denominated debt securities or bonds;
- · Cash and cash equivalents;
- Money market instruments; and
- Derivatives (financial contracts whose value is linked to the price of another asset (e.g. indices, interest rates, share prices of currencies).

The Fund can use derivatives for efficient portfolio management (managing the Fund in a way that is designed to reduce risk or cost and/or generate extra income or growth). The Fund may also use derivatives for more speculative investment purposes to help achieve the Fund's investment objectives.

Geographical location (where we invest)

The Fund can invest anywhere in the world.

How we select invest investments (investment strategy)

This Fund is actively managed, which means that the Investment Manager does not copy a benchmark when selecting investments for the Fund.

INVESTMENT OBJECTIVE & POLICY (no longer available for investment) (Continued)

At least 40% of the debt securities and bonds will be investment grade at the time of investment i.e. either rated as high as or higher than the following standards or their equivalent by one or more nationally recognized statistical rating organizations (or, where not rated, where the Investment Manager considers to the issuer be of at least equal in credit quality to the following standards):

Standard & Poor's: BBB- or A-2; or

· Moody's: Baa3 or Prime-2; or

• Fitch: BBB- or F-2.

The Fund may invest in debt securities and bonds which are not investment grade. These securities generally pay a higher yield (interest rate) but are considered by rating agencies to be lower quality and carry more risk than investment grade bonds.

It is expected that, under normal market conditions, the Fund will maintain an overall weighted average credit rating of at least BBB-or equivalent.

The Fund is a multi-sector strategy which seeks to achieve its investment objective by diversifying across a range of sectors, securities, and currencies. The Investment Manager develops investment ideas and uses a disciplined research programme to add value by rotating actively among and within the global investment universe as valuations change. The Investment Manager identifies securities within each sector which they believe are undervalued or mispriced based upon internal research and analysis.

ESG (environmental, social, and governance factors)

In selecting investments, the Investment Manager also assesses each investee company against various ESG factors. The Fund will not invest in:

- Companies which, in the opinion of the Investment Manager, do not follow good governance practices.
- Issuers which MSCI have identified as failing the principles set out in the UN "Global Compact", unless the Investment Manager considers a "fail" grade to be inaccurate.
- Companies which manufacture controversial weapons (such as anti-personnel landmines, biochemical weapons, blinding laser weapons, depleted uranium, incendiary weapons) or which are in the same group as a company manufacturing such weapons.
- Companies which derive over 10% of revenue from:
- The manufacture or supply of civilian firearms.
- · Involvement in conventional weapons.
- The mining, production or distribution of thermal coal.
- Companies which derive over 5% of revenue from tobacco production and / or distribution.
- Companies which derive over 5% of revenue from the production of nuclear weapons.

- 1 The "return before operating charges" is calculated as the "return after operating charges" plus the "operating charges".
- 2 The "operating charges" are calculated with reference to the total expenses for the year divided by the number of shares in issue at each valuation point.
- 3 The "return after operating charges" is calculated as the "closing net asset value per share" plus the "distributions" (for income share classes only) minus the "opening net asset value per share".
- 4 The direct transaction costs include all fees and expenses which relate directly to the sales and purchases of securities which include commissions, transfer taxes and duties. Direct transaction costs do not include any difference between the quoted bid and offer prices or internal administrative or holding costs. The "direct transaction costs" ratio is calculated by dividing the total transaction costs by the average net assets.
- 5 The "return after charges" is calculated as the "return after operating charges" per share divided by the "opening net asset value per share". This figure will differ from "performance return" figure disclosed under "Investment Review" section due to alternative calculation methodology used.
- 6 The "operating charges ratio" represents all operating charges and expenses of the share class in the prior 12 months as a percentage of the share class's average net assets during the year. Where the period is less than 12 months, the operating charges are annualised.
- * The Fund launched on 23 September 2022. The opening net asset value per share is calculated from the merger price.

** The fund closed on 14 June 2024.

RISK PROFILE (W Accumulation Shares) As at 30 September 2024

This indicator, disclosed in the Key Investor Information Document ("KIID"), provides a measure of the price movement of the Fund based on historical behaviour. Historical data may not be a reliable indication of the future risk profile of the Fund. The category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean risk free.

For a full discussion of all the risks applicable to this Fund, please refer to the "Risk Factors" section of the current prospectus of Franklin Templeton Funds.

Equalisation

All shareholders, within each share category, receive the same distribution per share, although the distribution to shareholders who purchased shares during the distribution period (Group 2 holdings) contains an element of equalisation which is a repayment, at an average rate per share, of the amount of accrued net income which was included in the purchase price of such shares. As the nature of this payment is capital it is not subject to income tax but must be deducted from the purchase price in any capital gains tax computation on the sale of the shares.

FURTHER INFORMATION

Accounting reference and other dates

Subject to the FCA Rules, the accounting reference dates, interim accounting reference dates, distribution pay dates, grouping periods and dates of publication of annual and interim reports of each of the Funds are as follows:

Accounting Reference Date (i.e. the financial year end) and Interim Accounting Period: 31 March and 1 April to 30 September.

Publication of Annual and Interim Reports: by 31 July and 30 November.

Shares

A summary of Shares Classes which are launched and available for investment can be found detailed in the prospectus.

A Net Income Share is a Share in respect of which net income is to be distributed in accordance with its share in the property of the relevant Fund. Cash distributions of income are made in respect of Net Income Shares.

A Net Accumulation Share is a Share in respect of which the net income allocated after the date of issue thereof is to be accumulated in the proportion of the value of the property of the relevant Fund as may from time to time apply thereto. Where net Accumulation Shares are in issue, no cash distributions are made and no additional Shares are issued. Instead, the income available for distribution is re-invested and the re-investment reflected in the price of the Net Accumulation Share.

Charges

The ACD's periodic remuneration

The ACD is entitled to receive out of the scheme property of each Fund for its own account, monthly on the last Business Day of each month or as soon as possible thereafter, the amount of the annual management charge accrued to it during that month. Under current VAT legislation, no VAT is payable on the ACD's remuneration. This annual management charge is calculated daily based on the assets of each Fund at the Valuation Point on the previous business day adjusted for capital movements due to unit dealing.

^{**29} February in a leap year.

FTF Templeton Global Total Return Bond Fund	N/A	N/A	0.55	Income
FTF Western Asset Global Multi Strategy Bond Fund (not available for investment)	N/A	N/A	N/A	N/A

Such periodic remuneration is taken in each case at the rate of one-twelfth thereof each month. These rates are calculated by reference to the Net Asset Value of a Fund referable to the EB Shares, S Shares, and W Shares respectively.

The ACD is entitled to receive a monthly administration charge out of property of each Fund to be calculated, accrued and payable in the same manner and at the same time as the ACD's annual management charge.

The current administration charge in respect of all Class EB, Class S, and Class W Shares is 0.05% per annum (plus any VAT or any equivalent tax thereon), and the maximum permitted administration charge in the case of all Funds is 0.10% (plus any VAT or any equivalent tax thereon).

Any increase of the preliminary charge or ACD's annual management charge may be made by the ACD, if it is deemed by the ACD to be a significant rather than a fundamental change (as set out in the provisions of the FCA Rules) only after:

- (a) giving 60 days' written notice to all Shareholders (in the case of an increase of the annual management charge) or to regular savers (in the case of the preliminary charge), and
- (b) the ACD revises the prospectus to reflect the proposed increase.

If such a change is deemed fundamental it will require the approval of the Shareholders.

Subsequent events

Franklin Templeton Fund Management Limited, the Authorised Corporate Director ("ACD"), wrote to investors in FTF Martin Currie Japan Equity Fund on 16 October 2024 giving notice of changes to the Investment Policy, Investment Manager and Name of the Fund. These changes will take place with effect from 17 December 2024.

Note for Investors

The value of shares and the income therefrom may go down as well as up and is not guaranteed. Past performance is not necessarily a guide to future performance.

In particular, some investments held may be designated in currencies other than Sterling and so may rise and fall purely on account of exchange rate fluctuations.

Investors should be aware of the risks associated with this type of investment and should take a medium to long-term view of returns.

Emerging markets can be riskier than developed markets.
