Investment Managers' Report

Risk assets registered positive returns in the 12 months ending 31 March 2026.

Global equities posted strong gains over the 12-month review period. While US technology companies were again major performance drivers, the sector's strength was uneven, with periodic selloffs triggered by fears of AI-driven disruption and overinvestment. Trade tariff threats and geopolitical instability contributed to market volatility, and equities slumped in April 2025 after President Trump's "Liberation Day" announcement. This initially raised fears of "stagflation" (higher inflation and lower growth), but trade tensions largely subsided and equities rebounded, led by tech stocks, as inflation eased.

The review period was a broadly positive one for US equities, despite bouts of significant volatility. The major large-cap US index delivered double-digit returns. Stocks were supported by largely resilient economic data, ongoing progress in global trade negotiations and strong corporate earnings. However, frequent tariff actions, escalating geopolitical tensions, concerns around AI-related capital expenditure and signs of cooling labour-market momentum led to several pullbacks and episodes of heightened volatility.

European equities delivered strong gains over the 12-month review period, supported by interest rate cuts, easing inflation and signs of stabilising eurozone growth after prolonged weakness. Volatility persisted, driven by geopolitical tensions, shifting US trade policy and ongoing political uncertainty in several European countries, including France and Germany. Small caps found favour, as they are often more domestically oriented and so perhaps less vulnerable to tariff shocks. Markets started well in 2026, benefiting from a rotation away from large US technology and into cheaper Europe. Volatility persisted following US-Israel strikes on Iran, which drove a rise in oil prices and disrupted shipping through the Strait of Hormuz. Markets balanced a more stable economic outlook against persistent geopolitical risks.

Like its European counterparts, in early 2025, the UK government outlined plans to increase military spending, which heightened concerns about the burgeoning deficit. Later, following threats of internal revolt, the Labour government watered down its welfare reforms, thereby halving the fiscal "headroom" available to Chancellor Rachel Reeves. This also stoked fears of higher government borrowing and taxes. The end of 2025 and the first months of 2026 were characterised by a rotation from large US technology stocks amid concerns that these companies may not earn enough to recoup their large investments in AI infrastructure. This backdrop proved beneficial for the FTSE All-Share given its limited exposure to technology and as investors switched focus to companies that are perceived to be more insulated from AI risk, such as shares of energy companies and miners.

The MSCI AC Asia Pacific ex Japan index rose sharply in the year under review in sterling terms. Over the period, Asian equities were supported by hopes of interest-rate cuts in the US and weakness in the dollar. Sentiment was further boosted by renewed optimism around AI-driven demand for semiconductors as major US technology companies released better-than-expected earnings and reaffirmed their capital spending commitments.

In terms of activity, new positions in the CT (Lux) Global Select Fund included Walmart, ASML and Applied Materials. Walmart is a leading US retailer. The company has nearly a 25% share of the market and, in our view, is well positioned to grow this following a period of investment in the business. Walmart is able to leverage its scale and digital expertise to offer value to consumers in times of uncertainty, which gives it a competitive advantage among its peers and should help it to gain share in the omnichannel market, offering scope for network effects going forward. With e-commerce losses stabilising and improved performance from alternative profit streams, we see strengthening fundamental drivers for Walmart in an uncertain macro environment. ASML boasts a dominant share of the global market for extreme ultraviolet (EUV) machines. These are used to pattern leading-edge chips in a variety of applications, including mobile phones and medical equipment, as well as in emergent technologies such as AI, robotics and electric vehicles. Notably, AI is increasing demand for DRAMs, which are more lithography intensive, and therefore should prove beneficial for ASML. For Applied Materials, ongoing investment in AI infrastructure and continued demand for next-generation chip technologies underscore the firm's strong positioning within the evolving semiconductor landscape. The company also stands to gain from the growth of cloud computing and the broader digital transformation across industries. Applied Materials' strong customer relationships with leading semiconductor manufacturers allows the firm to capture value throughout industry cycles.

In the CT (Lux) Global Focus Fund, new positions included Applied Materials and ASML (see above) and Safran. Safran is a manufacturer of aircraft engines and equipment and benefits from a very resilient aftermarket. The firm's diversified aerospace portfolio reduces dependence on any single programme or customer, and its customers face high switching costs. Safran also has highly predictable long-term revenue streams through aftermarket services. We sold Muenchener Rueckversicherungs, RELX and Microsoft.

Muenchener Rueckversicherungs had performed well over the holding period, and so we opted to take profits. The exit from Microsoft was a conviction call driven by the view that the company faces increasing competitive pressure from other hyperscalers and is lagging in LLM strategy, while the market is increasingly worried about the level of AI capex. We also reduced exposure to names where the threat of AI disruption risk continues to weigh on sentiment even though we maintain medium to long term conviction, as was the case for Experian. We sold out of Lam Research to lock in profits after strong performance. After a strong run of performance, we also exited our position in data storage device manufacturer Western Digital.

In the CT (Lux) Global Smaller Companies, new positions included Descartes Systems Group, flatexDEGIRO and Flowserve. Descartes is a global provider of cloud, device and data content-based solutions across a wide range of industries. The company's products and solutions improve the productivity, security and sustainability of logistics-intensive businesses. Descartes' Logistics Technology Platform unites a growing global community of logistics parties, allowing them to transact business while utilising an array of applications to help their businesses thrive. The well-managed firm could also benefit from the increasingly complex global trade environment. We initiated a position in flatexDEGIRO. The European digital investment platform presents an opportunity for growth in the under-penetrated European online brokers markets. The firm is benefitting from the increase in people investing their savings in markets, which has translated into strong customer

Investment Managers' Report

(continued)

growth, particularly in Spain, Italy and France. The company has moved past some issues raised by the German regulator BaFin and can now resume its focus on rolling out new products and technology improvements. Additionally, flatexDEGIRO's shares were trading at an attractive valuation. Flowserve is a leading manufacturer of pumps and valves used in various high value, mission critical applications. One interesting area for the company is its exposure to nuclear applications, which, in the face of rapidly increasing energy usage globally, is translating into excellent demand growth. The high barriers to entry in this area also give Flowserve a strong competitive position. We sold VSE, DNOW and Gates Industrial to fund better ideas.

In the CT (Lux) European Select Fund, new holdings over the year included Infineon Technologies, Novartis and CaixaBank. We bought Infineon, the German semiconductor manufacturer, which is benefiting from data centre capital expenditure. Novartis is an attractively valued stock in the defensive pharmaceutical sector. The company has a diversified product range and leads in oncology and immunology. We bought CaixaBank as we had been underweight in Spanish banks: this purchase bring greater balance to our overall sector exposure. Sales included SAP, Muenchener Rueckversicherungs and Hannover Rueck. We sold SAP to reduce exposure to AI-related disruption, given its reliance on software and the cloud. For Muenchener Rueckversicherungs and Hannover Rueck, we took profits after a rally - the upturn in the cycle has proved profitablefor shareholders.

In the CT (Lux) Pan European Focus Fund, new holdings over the year included AstraZeneca, Sandvik and Legrand. With a strong pipeline of pioneering drugs, patent protection and strategic pricing decisions, AstraZeneca is poised to grow revenue and market share. Swedish mining engineering firm Sandvik benefited from rising metal prices. French Industrial group Legrand has benefited from buoyant data centre growth, driven by AI-related investment. The company continues to expand through acquisitions and has an impressive business model with high barriers to entry, as well as strong profitability and free cash generation. Sales included Schneider Electric, Cie de Saint-Gobain and ABB. We sold Schneider, using recent strength to reduce our cyclical exposure. Changes to management — including the head of the automation division and the CFO — raised concerns. The sale of Cie de Saint-Gobain reflected a portfolio rebalancing exercise rather than major changes in view. We took profit in ABB.

In the CT (Lux) UK Equities Fund, the biggest purchases included Babcock International Group, Anglo American and Croda International. Defence company Babcock International Group has been transformed over the last five years by the new management team: operations and the balance sheet are in much better shape, while the company has madegood progressin winning contracts on sensible terms. As a defence contractor, the business stands to benefit when governments step up defence spending. Babcock International Group is also one of the three leading players in UK nuclear engineering, where it has unique capabilities and further growth opportunities. In addition, the guidance for medium-term margin expansion appears realistic, especially given that the company delivered 10% organic sales growth versus a mid-single-digit target previously. Despite recent outperformance, the shares appear attractively valued on an earnings-per-share basis.

Following the completion of its planned merger with Canadian rival Teck Resources, mining company Anglo American expects to see synergies that could enhance underlying earnings. Copper is expected to contribute more than 70% of Anglo's earnings, and the stock is trading at a discount to other pure play copper miners. We favour the company for its diversified portfolio of high-quality mineral assets (including diamonds, iron ore and nickel as well as copper), strong commitment to sustainability and advanced use of technology to drive operational efficiency and long-term value creation. Anglo is currently undergoing a major corporate restructuring, having sold its coal assets and demerged the Valterra Platinum business; the divestment of the diamond and nickel divisions is also expected.

Croda International produces ingredients for use in theindustrials, lifesciencesand consumer care sectors. The company had seen its earnings decline due to destocking in end markets and the end of Covid-related tailwinds, though this has now stabilised, and the company's valuation appears reasonable. Croda International's shared manufacturing facilities require a steady state in all end markets to see benefits in operating leverage and margin growth, whichremainsdifficult to forecast. However, increased focus on cost controls and the end of a heavy capital expenditure cycle should help the company to improve free cash flows in 2026.

We exited several positions, including Associated British Foods, Magnum Ice Cream and Legal & General Group.

In the CT (Lux) UK Equity Income Fund, new positions included Rio Tinto, Dunelm Group, and Croda International (see above). The leading mining company Rio Tinto is investing in research and development, which should improve efficiency and strengthen the company's market position. In our view, Rio Tinto is well placed to benefit from increased demand for iron ore, particularly as China's manufacturing sector recovers. Meanwhile, the company is making changes to reduce discrimination in its workforce and improve diversity. We are encouraged by the firm's increasing focus on the impact of its operations on local communities. Moreover, Rio Tinto boasts a robust financial position, and the firm's exposure to copper should be beneficial if supplies dwindle in the coming year.

Dunelm Group offers an attractive UK domestic recovery play with self‑help catalysts, improving trading momentum and a strengthened management team. Following a soft period driven by macro and promotional distortions, trading has stabilised and is improving, while multiple operational initiatives should support higher sales frequency, basket growth and margin resilience into the 2027 financial year. Alongside valuation support, the shares offer an attractive dividend yield, underpinned by strong cash generation and a history of recurring special dividends.

We exited Bellway. We also sold a stub holding in Magnum Ice Cream Company, which we had received in December 2025 following the company's demerger from Unilever, and recycled the funds into Diageo.

New holdings in the CT (Lux) American Fund included Applied Materials, Cisco Systems and Croda Intercontinental Exchange. Applied Materials is a diversified supplier of semiconductor fabrication equipment and related technologies. The firm provides nanomanufacturing

Investment Managers' Report

(continued)

solutions for electronic products, including in the global semiconductor and flat panel display industries. The stock suffered on concerns around softening demand in China due to export restrictions and slower growth in legacy nodes (older, less advanced semiconductor manufacturing processes that are nevertheless still in use). However, these concerns should pose less of a headwind going forward. Additionally, a substantial increase in demand for leading-edge logic chip manufacturing, which uses the most cutting-edge processes, has potential to be a key driver of growth in the coming years. Cisco Systems provides data networking products that use internet protocol technology. The company's solutions transmit data, voice and video within buildings, across campuses and around the world. Cisco's core switching business has returned to growth after several quarters of significant declines. While management has only guided for modest growth coming out of a downturn, recent order growth strength among peers is encouraging and implies Cisco could see a stronger snap back in revenues over the next year. Additionally, trends in Splunk (Cisco's vast data collection platform) and Security (Cisco's cybersecurity platform) have been stronger than expected. While the valuation has increased recently, we see potential for further upside and room for continued multiple expansion. Intercontinental Exchange operates regulated clearing exchanges, marketplaces and data services for financial and commodity markets. The company's mortgage services business, which aims to automate and digitise the mortgage origination process, stands to benefit from an improving interest-rate environment. Additionally, Intercontinental Exchange's clearing business operates with local monopolies, with some competition from CME in substitutable markets. The incremental returns in both the core clearing business and the data businesses have been very high. The company's energy division also continues to gain market share in both oil and natural gas as the firm builds out its environmental business. The revenue stream is volatile but tends to grow over the cycle, and the management team has a strong track record of value creation. Sales included Lam Research, ExxonMobil and Sherin-Williams.

In the CT (Lux) American Smaller Companies Fund, new holdings included AES, ABM Industries and Freshpet. AES is a diversified power generation and utility company that operates renewable and fossil power plants, mostly located in the Americas. Recently, the company's performance has been challenged due to weak conditions for hydroelectric generation and low power prices. However, AES has "safe harboured" most of its renewable development plans through 2028, which should help it to finance projects through credit transfers and tax-equity finance. While the company's leverage is currently high, this should be reduced once projects are fully developed and construction debt is brought down. Additionally, asset sales and growth in the firm's renewable portfolio should support profitability, and the stock is currently trading at a low valuation relative to the company's financial profile. ABM Industries is a leading provider of facility services, including janitorial, parking, building engineering and energy efficiency solutions for commercial, industrial and governmental facilities located in the US and the UK. With work-from-home dynamics having bottomed out following the Covid pandemic, ABM Industries appears to be well positioned for organic growth on the back of reporting record new customer numbers and a backlog for its technical solutions project business. This should benefit margins and free-cash-flow generation, while management's strategic "ELEVATE" programme aims to improve the firm's go-to-market strategy and generate cost savings. Following a negative market reaction after the company's fiscal Q2 earnings release, we believe the stock offers an attractive risk-reward profile. Freshpet has pioneered the growth of the fresh pet food category in the US, a category that resonates with the twin trends of pet humanisation and pet-ownership growth that is being led by a younger demographic. Freshpet has a presence in over 29,000 stores and has demonstrated strong sales growth in the last five years. However, the stock has weakened over the year to date as sales growth has slowed, although it remains comfortably ahead within the pet -food category, which is also struggling to grow in 2025. Additionally, the softer outlook for sales growth and concerns about accelerating competitive activity are now largely reflected in the discounted stock price. In our view, Freshpet remains in great operational shape. The execution issues that plagued the company previously have now been addressed, and the firm's longer-term margin targets (set earlier this year) still look achievable. The company remains well positioned to continue growing in the category and offers an increasingly attractive risk-reward profile.

Sales included ATI, Avista, Revolution Medicines, Cirrus Logic, Shake Shack and Chefs' Warehouse, among others.

New holdings in the CT (Lux) American Select Fund during the year included Broadcom, Mastercard, TJX Cos. We opened a position in Broadcom following some bullish comments regarding Graphics Processing Unit demand from Nvidia CEO Jensen Huang. Broadcom boasts a strong market position in data centres, networking and recurring software. The firm is also well placed to benefit from the growing demand related to generative AI. Mastercard, the global payments firm, benefits from its dominance in an oligopolistic industry, strong brand and global reach. With these competitive edges, Mastercard has a powerful network effect. The firm is also ahead of peers in terms of penetration and its superior value-added services. In our view, Mastercard is well placed to benefit from the shift from cash to card and the expansion of e-commerce. TJX Cos is the largest and most diverse off-price retailer and has continued to build momentum across geographies and channels, resulting in accelerating share gains. The company is well positioned to gain share from traditional retailers and has a widening competitive moat. Sales included Procter & Gamble, Gitlab, Republic Services, Burlington Stores and Entergy, among others.

Threadneedle Management Luxembourg S.A.

May 2026

Past performance is not a guide to future performance. The value of investments and any income from them may go down as well as up.

Directors' Report

The Board of Directors is pleased to present the Annual Report and Audited Financial Statements of Columbia Threadneedle (Lux) I (the "SICAV") for the year ended March 31, 2026, and considers that, taken as a whole, they are fair and balanced and provide the information necessary for shareholders to assess the SICAV's position and performance.

During the year, the size of the SICAV decreased by USD 703 million to USD 19,276 million (USD 19,979 million as of March 31, 2025).

Structure of the Fund
The SICAV is organised as an investment company with variable capital (*société d'investissement à capital variable*), established as a public limited company under Luxembourg Law and as such is also governed by the Law of August 10, 1915 on commercial companies, as amended. The Board has appointed Threadneedle Management Luxembourg S.A. as management company of the SICAV (the "Management Company"). The SICAV is composed of 41 Funds which have their own investment objective, policies and restrictions.

The objective of the SICAV is to place the money available to it in transferable securities and other permitted assets of any kind, in accordance with the SICAV's Prospectus, with the purpose of spreading investment risks and affording shareholders the results of the management of their portfolios.

The SICAV qualifies as an Undertaking for Collective Investment in Transferable Securities ("UCITS") under Part I of the Luxembourg law of December 17, 2010 on undertakings for collective investment, as amended, and the UCITS Directive 2009/65/EC, and is registered on the CSSF's official list of collective investment undertakings. The SICAV may therefore be offered for sale in European Union Member States, subject to notification in countries other than the Grand Duchy of Luxembourg. In addition, applications to register the SICAV and its Fund may be made in other countries.

The SICAV has 41 active Funds as at March 31, 2026. The Funds and share classes are registered for offer and distribution in the Grand Duchy of Luxembourg, Austria, Belgium, Chile, Denmark, Finland, France, Germany, Hong Kong, Iceland, Ireland, Italy, Liechtenstein, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and UK.

Role and Responsibility of the Board
The responsibility of the Board of Directors is governed exclusively by Luxembourg law. With respect to the annual accounts of the SICAV, the duties of the Directors are governed by the law of December 10, 2010 on, inter alia, the accounting and annual accounts of undertakings for collective investment and by the law of December 17, 2010, as amended, relating to undertakings for collective investment.

An agreement between the Fund and the Management Company sets out the matters over which the Management Company has authority under Chapter 15 of the Law of December 17, 2010. This includes management of the SICAV's assets and the provision of administration and marketing services. All other significant matters are reserved for approval by the Board of Directors, including the determination of the Fund's investment objective and policies, investment restrictions and powers, amendments to the Prospectus, reviewing and approving the annual accounts, as well as the appointment of, and review of the services provided by, the Management Company, Auditor and Depositary.

The Directors take decisions in the interests of the SICAV and its shareholders as a whole and refrain from taking part in any deliberation or decision, which creates a conflict of interest between their personal interests and those of the SICAV and its shareholders.

The Board can take independent professional advice if necessary and at the SICAV's expense.

Board Composition
As of March 31, 2026, the Board comprised of 5 Directors, 4 of which are independent from the investment manager and all the directors are independent from the Management Company.

The Board of Directors does not limit the number of years of Directors' service, and it does consider the nature and requirements of the fund industry and of the SICAV's business when making recommendation to shareholders for Directors be appointed. The terms of each Director's appointment are set out in a contract for services.

Induction and Training
All new Directors will receive an induction incorporating relevant information regarding the SICAV and their duties and responsibilities as a Director. In addition, the Board of Directors, and the Directors individually, takes active steps to keep up to date with developments relevant to the SICAV by means of trainings or otherwise.

Board Meetings
The Board of Directors meets quarterly but if necessary additional meetings are arranged. Given the scope and nature of the business of the SICAV, the Board of Directors does not currently consider it necessary to have a formal Audit or Remuneration Committee.

Environmental Social Governance ("ESG")
The Funds include ESG as part of their investment policies, details of which are included within the Prospectus.

Directors and Officers indemnity Insurance
The SICAV's Articles of Incorporation provide that the Directors are reimbursed for, or covered against expenses reasonably incurred in connection with any claim against them arising in the course of their duties or responsibilities, provided they have not acted fraudulently or

Directors' Report

(continued)

dishonestly. To protect Shareholders against any such claims, the Board has taken out Directors and Officers Indemnity Insurance, which indemnifies the Directors against certain liabilities arising from their duties and responsibilities but does not cover fraudulent or dishonest actions.

Independent Auditor

PwC has been the SICAV's Auditor since 2011. The Board of Directors agreed that PwC should continue to be proposed to the shareholders to be appointed as Auditor.

Annual General Meetings ("AGM")

The next AGM of the Fund will be held on July 28, 2026, at the Registered Office of the SICAV to consider matters relating to the year ending on March 31, 2026. At this meeting, shareholders will be requested to consider the usual matters at such meetings including:

1. The adoption of the Financial Statements and approval of the allocation of the results,
2. The approval of Directors' fees,
3. The election of Directors,
4. The election of the Auditor, and
5. The discharge of Directors duties.

No special business is being proposed by the Board of Directors.

Discharge of Directors

One of the resolutions in the AGM is, as required under Luxembourg Law, for shareholders to vote on the discharge the Directors of their duties for the accounting year in question. This discharge is only valid where the annual accounts contain no omission or false information concerning the real financial situation of the Fund.

Significant Events

Please refer to *Notes to the Financial Statements* for details of significant events during the year.

The Board of Directors
July 2026

Audit report

To the Shareholders of

Columbia Threadneedle (Lux) I

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Columbia Threadneedle (Lux) I (the "Fund") and of each of its sub-funds as at 31 March 2026, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund's financial statements comprise:

- the aggregated statement of net assets for the Fund and the statement of net assets for each of the sub-funds as at 31 March 2026;
- the aggregated statement of operations and changes in net assets for the Fund and the statement of operations and changes in net assets for each of the sub-funds for the year then ended;
- the portfolio statement as at 31 March 2026; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the "Commission de Surveillance du Secteur Financier" (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the "Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements" section of our report.

PricewaterhouseCoopers Assurance, Société coopérative,
2 rue Gerhard Mercator, L-2182 Luxembourg
T : +352 494848 1, F : +352 494848 2900, www.pwc.lu

Cabinet de révision agréé. Expert-comptable (autorisation ministérielle n°10181659)
R.C.S. Luxembourg B294273 - TVA LU36559370

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Other information

The Board of Directors is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors for the financial statements

The Board of Directors is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the "Réviseur d'entreprises agréé" for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors;

- conclude on the appropriateness of the Board of Directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Notes to the Financial Statements

1. GENERAL

Columbia Threadneedle (Lux) I (the "SICAV") is an investment company with variable capital (*Société d'Investissement à Capital Variable*) governed by Part I of the law of December 17, 2010, relating to Undertakings for Collective Investment, as amended.

The SICAV offers investors the opportunity to invest in separate portfolios (the "Portfolios"). Each Portfolio has a different investment objective and is a separate portfolio of assets represented by separate shares. Each Portfolio may have one or more classes of shares (the "share classes") related to it. The SICAV as a whole, including all of the existing Portfolios and all future Portfolios, is one legal entity. However, with regard to third parties and, in particular, with regard to the SICAV's creditors and as between shareholders, each Portfolio shall be exclusively responsible for all liabilities attributable to it.

Significant events during the year:

New prospectuses
New prospectuses were issued in April, August, October 2025 and in February 2026.

Name changes
With effect from April 28, 2025 CT (Lux) Pan European ESG Equities was renamed to CT (Lux) Pan European Equities.

With effect from August 13, 2025 CT (Lux) Global Equity Income was renamed to CT (Lux) Sustainable Global Equity Income.

Launching and closing of Funds
With effect from November 5, 2025 the CT (Lux) Global Social Bond Portfolio and the CT (Lux) Global Investment Grade Credit Opportunities Portfolio were put into liquidation and the final redemption occurred on November 12, 2025.

The CT (Lux) Global Real Estate Securities launched on November 13, 2025.

Fees reduction
From August 1, 2025 the Operating Expenses and Asset Management Fee for certain share classes of the CT (Lux) Sustainable Global Equity Income Portfolio have been reduced as follows:

	Until the effective date		From the effective date	
Share class	**Asset Management Fee**	**Operating Expenses**	**Asset Management Fee**	**Operating Expenses**
A Shares	1.50%	0.30%	1.50%[1]	0.20%
D Shares	2.00%	0.30%	2.00%[1]	0.20%
I Shares	0.75%	0.10%	0.60%	0.10%[1]
Z Shares	0.75%	0.30%	0.75%[1]	0.15%

[1]*no change*

[1]As at March 31, 2026, these Portfolios have been authorised by the Securities and Futures Commission in Hong Kong and are available to the public of Hong Kong. Effective June 12, 2026, this authorisation was withdrawn, and the Portfolios are no longer available to the Hong Kong public.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The financial statements are prepared and presented in accordance with generally accepted accounting principles applicable to UCITS (Undertakings for Collective Investments in Transferable Securities) investment funds in Luxembourg, and require management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates.

The financial statements are presented on the basis of the Net Asset Value of the Portfolios which are calculated as of March 31, 2026. The last official trading Net Asset Value of the corresponding Portfolios has been calculated as of March 31, 2026.

Notes to the Financial Statements

(continued)

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

(continued)

The financial statements are prepared in accordance with Luxembourg legal and regulatory requirements relating to investment funds under the going concern basis of accounting, except for the CT (Lux) Global Social Bond and CT (Lux) Global Investment Grade Credit Opportunities Portfolios, which were put into liquidation on November 5, 2025. As such, the financial statements for these Portfolios have been prepared on a non-going concern basis and any additional costs in respect of the termination of these Portfolios will be borne by the Management Company.

i) Valuation of securities

Transferable securities, money market instruments and any financial assets listed or dealt in on a regulated market are valued at their last exchange price in the relevant market at the time of closure of the market. If such prices are not representative of their fair market value, such securities are stated at the fair value at which it is expected they may be resold, as determined in good faith by or under the direction of the Board of Directors.

For securities traded on Asian markets, the last traded price may be adjusted where necessary to reflect fair value at the valuation point, taking into account market movements occurring after the close of the relevant exchange. Such adjustments are determined using approved fair value pricing models provided by independent pricing vendors.

Fixed income securities not traded on such markets are valued at the last available price or yield equivalents obtained from one or more dealers or pricing services approved by the Board of Directors, or any other price deemed appropriate by the Board of Directors.

Money Market Instruments (or other instruments in line with market convention in the jurisdiction in which the instrument is held) with a remaining maturity of 90 days or less will be valued by the amortised cost method, which approximates market value. Under this valuation method, the relevant Portfolio's investments are valued at their acquisition cost or the last market value prior to the 90 day period commencing (where an instrument at purchase date originally had more than 90 days to maturity) and adjusted for amortisation of premium or accretion of discount rather than at market value.

Units or shares of open-ended undertakings for collective investments ("UCIs") are valued at their last determined and available net asset value (the "Net Asset Value") or, if such price is not representative of the fair market value of such assets, then the price shall be determined by the SICAV, on a fair and equitable basis. Units or shares of closed-ended UCIs are valued at their last available stock market value.

The directors of the SICAV (the "Directors"), in their discretion, may permit some other method of valuation to be used if they consider that such valuation better reflects the fair value of any asset of the SICAV.

ii) Forward Currency Exchange Contracts

For the purpose of hedging against specific currency risk or investing in other currencies, the SICAV may enter into forward currency exchange contracts. At the year-end, open forward currency exchange contracts are valued at the forward rates applicable for the remaining period until maturity. The net movement in the unrealised gain/(loss) arising on forward currency exchange contracts is recorded in the Statement of Operations and Changes in Net Assets. The contracts outstanding as at March 31, 2026 are disclosed in Note 8.

iii) Futures Contracts

The SICAV may enter into futures exchange contracts. Open futures contracts are valued at the prices on the exchange for which the contracts are traded on. The net movement in the unrealised gain/(loss) arising on futures contracts is recorded in the Statement of Operations and Changes in Net Assets. The contracts outstanding as at March 31, 2026 are disclosed in Note 10.

iv) Swaps

The SICAV may enter into Interest Rate Swaps ("IRS"), Credit Default Swaps ("CDS"), Total Return Swaps ("TRS") and Contracts for Difference ("CFD"). IRS are valued on the basis of their market value established by reference to the applicable interest rate curve. CDS are valued by reference to the net present value of the expected future cash flows based on the market interest rates and the markets expected default and recovery rate of the underlying asset. An upfront payment, if any, made by the SICAV is recorded as an asset in the Statement of Net Assets. An upfront payment, if any, received by the SICAV is recorded as a liability in the Statement of Net Assets. TRS are valued by reference to the mark to market value based on the market value of the underlying asset. CFD are valued at the closing price of the underlying instrument less the financing costs attributable to the relevant contract. The net movement in the unrealised gain or loss arising on swaps is recorded in the Statement of Operations and Changes in Net Assets. The contracts outstanding as at March 31, 2026 are disclosed in Note 9. Dividends payable on swaps short positions, if any, are recorded as a liability in the Statement of Net Assets.

v) Options

Options traded on a regulated market are valued at the market price on the valuation date. Such options open as at March 31, 20266 are shown in the Schedule of Investments. Over-the-counter ("OTC") options are valued based on prices received from third party pricing agents/models. Such options open as at March 31, 2026 are shown in Note 11. Unrealised gains or losses arising at the time of reporting from the valuation of options trades are taken into account in the Statement of Operations and Changes in Net Assets.

Notes to the Financial Statements

(continued)

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

(continued)

vi) Translation of currencies

The accounts of each Portfolio are kept in the currency in which its net assets are expressed. The relevant Statement of Net Assets, Statement of Operations and Changes in Net Assets and the Schedule of Investments are expressed in this currency (the "base currency").

During the year, transactions, income and expenses denominated in a currency other than the base currency are recorded on the basis of exchange rates prevailing on the date they occur or accrue to the Portfolio.

At the date of the Statement of Net Assets, monetary assets and liabilities denominated in a currency other than the base currency are translated into the base currency of the Portfolio on the basis of exchange rates prevailing on that date. Exchange differences are included in the Statement of Operations and Changes in Net Assets.

The aggregated Statement of Net Assets and Statement of Operations and Changes in Net Assets are presented in USD based on the exchange rates ruling at the date of the Statement of Net Assets. Exchange rates used as at March 31, 2026 are: 1 USD = 1.460067 AUD, 1 USD = 0.867905 EUR, 1 USD = 0.758323 GBP, 1 USD = 0.803550 CHF, 1 USD = 9.526250 SEK, 1 USD = 6.485400 DKK, 1 USD = 9.740950 NOK, 1 USD = 1.290150 SGD, 1 USD = 159.090000 JPY.

The difference between the opening net assets stated at exchange rates ruling at the beginning of the year and their value at the end of the year is shown as a currency translation adjustment in the Aggregated Statement of Operations and Changes in Net Assets under the heading Exchange differences.

vii) Cash at bank

The cash at bank reflected in the Statements of Net Assets includes also the margins on futures contracts and cash collateral paid by the Portfolios for swaps transactions and forward currency exchange contracts.

Cash and margins on futures contracts are valued at cost, which approximates the market value.

viii) Term deposits

Term deposits are valued at cost, which approximates the market value.

ix) Investment transactions and investment income

Securities are recorded at cost, and where applicable on the basis of exchange rates prevailing on the date they are purchased.

Results on sales of securities are determined on the basis of the average cost method. Investment transactions are accounted for on the trade date. Dividends are accounted for on the ex-dividend date. Interest income is recorded on an accrual basis. Discounts/Premium on zero coupon bonds are accreted as adjustments to interest income.

Interest, dividends and capital gains on securities may be subject to withholding or capital gains taxes in certain countries.

x) Distribution policy

The policy of the SICAV in respect of Accumulation Share Classes is to make no distributions and to retain all net earnings within the Net Asset Value of the same Portfolio and Share Class. In respect of Distributing Share Classes the SICAV intends to make distributions, with a frequency,at least annually, and in an amount to be determined by the Directors,provided that the Directors may at any time delegate such determination to the Management Company, acting through its Dividend Committee. The Shareholders of Distributing Share Classes have the option to receive the dividend or to reinvest it in the same Share Class without any subscription charge.

The general policy for Distributing Share Classes is to distribute dividends based on all investment income received for the distribution period before the deduction of fees and expenses, i.e. gross of fees and expenses. The Directors (or where applicable the Management Company acting through its Dividend Committee pursuant to a delegation), should they deem it appropriate, reserve the right to distribute a different amount and may determine if and to what extent dividends may include distributions from capital.

No distribution may be made which would result in the Net Asset Value of the SICAV falling below the minimum capital required by Luxembourg law.

Distributions reduce the Net Asset Value per Share by the amount distributed. Shareholders should note that distributions made gross of fees and expenses may result in higher dividend payments; however since fees and expenses are charged to capital rather than income, the potential for future capital appreciation of the Net Asset Value may be reduced.

Certain Portfolios may also use derivatives, such as call options, with the aim of generating additional income. Shareholders should note that whilst this may allow more income to be distributed, it may also have effect of reducing capital and the potential for future capital appreciation.

The taxation of distributions varies in different jurisdictions and in particular dividends paid out of capital may have different tax implications to dividends paid out of income. Shareholders are recommended to seek their own professional tax advice in this regard.

Distributions are paid in the currency of the share class.

Notes to the Financial Statements

(continued)

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

(continued)

xi) Asset management fee rebates

Cross investments and investments in other Columbia Threadneedle funds are either made in non-fee paying share classes or where management fees are paid, these are fully rebated. Please also refer to note 16 for details on cross investments.

3. TAXATION

Under current law and practice, the SICAV is not liable to any Luxembourg income tax. Dividends, interest and capital gains received by the SICAV on portfolio investments may be subject to non-recoverable withholding taxes in the countries of origin.

The SICAV is subject to a tax of 0.05% per annum levied on the Net Asset Value at the last day of each calendar quarter in accordance with the 2010 Law. A reduced tax rate of 0.01% per annum of the net assets will be applicable to share classes which are only sold to and held by Institutional Investors. In addition, those Portfolios which invest exclusively in deposits and Money Market Instruments in accordance with the Luxembourg Law are liable to the same reduced tax rate of 0.01% per annum of their net assets.

The 0.01% and 0.05% rates described above, as appropriate, are not applicable for the portion of the assets of the SICAV invested in other Luxembourg collective investment undertakings which are themselves subject to the asset based taxes ("*taxe d'abonnement*").

For the avoidance of doubt, this *taxe d'abonnement* forms part of the SICAV's Operating Expenses.

No tax is payable in Luxembourg on realised or unrealised capital appreciation of the assets of the SICAV. Although the SICAV's realised capital gains, whether short-or-long-term, are not expected to become taxable in another country, the Shareholders must be aware and recognise that such a possibility is not totally excluded.

4. RELATED PARTY TRANSACTIONS

The SICAV may, on behalf of the different Portfolios, enter into borrowing arrangements (subject to the restrictions set out under "Investment Restrictions" in Appendix A of the prospectus) to buy or sell transferable securities, foreign exchange or other financial instruments through Threadneedle Asset Management Limited ("TAML"), a related entity and its affiliates, provided that such transactions are carried out at normal commercial terms and are in the best interests of the relevant Portfolio and its shareholders.

For the year ending March 31, 2026, the SICAV did not enter into transactions with connected persons.

The SICAV has appointed Threadneedle Management Luxembourg S.A. (the "Management Company") to serve as its designated Management Company in accordance with Chapter 15 of the law of December 17, 2010, as amended. Under the Management Company Services Agreement, the Management Company provides investment management, administrative and marketing services to the SICAV, subject to the overall supervision and control of the Board of Directors.

Neither the Management Company nor TAML earned commissions related to brokerage transactions. Please also refer to note 5 for details on commission sharing arrangements.

Certain officers and/or directors of the Management Company, the SICAV and other Columbia Threadneedle Group entities are also officers and/or directors of TAML.

The Management Company (on behalf of the SICAV) has delegated certain marketing and/or distribution functions to other Columbia Threadneedle Group entities. The Management Company receives a monthly fee for asset management services at an annual rate detailed in this note, expressed as a percentage of the average daily net assets for each of the Portfolios. The Management Company is responsible for paying sub-distribution fees out of this fee. Some of the Investment Managers are related entities.

As described in Note 7, the Management Company may also receive performance fees with respect to all J and Y shares of the CT (Lux) Global Investment Grade Credit Opportunities Portfolio and with respect to all A, D, I, L and Z shares of the CT (Lux) Pan European Absolute Alpha Portfolio.

All expenses incurred in the operation of the SICAV and defined below (hereafter the "Operating Expenses", "Asset Management Fee" or "Portfolio Charges", together, the "Expenses") are fixed at the rates shown in the tables from page 256 onwards. All expenses are accrued daily based on the Net Asset Value of the relevant share class in the relevant Portfolio. The Operating Expenses and the Asset Management Fee are paid out of the assets of the relevant Portfolio and the Initial Sales Charge and Exchange Fee is paid directly by investors.

The Operating Expenses include, among other things, taxes, expenses for legal and auditing services, costs of printing proxies, stock certificates, shareholders' reports and notices, prospectuses and PRIIPs KIDs and other promotional expenses, fees and charges of the Depositary and its correspondents, and of the Domiciliary Agent, Administrative Agent, Registrar and Transfer Agent and of any paying agent, expenses of the issue and redemption of shares, registration fees and expenses in various jurisdictions, listing fees, fees of unaffiliated Directors of the SICAV, expenses of the Directors and officers of the SICAV and the Investment Managers relating to attendance at meetings of the Directors and of the shareholders of the SICAV, translation costs, accounting and pricing costs (including the calculation of Net Asset Value per share), insurance, litigation and other extraordinary or non-recurring expenses, and all other expenses properly payable by the SICAV. The Operating Expenses also include the service fee payable to the Management Company.

Notes to the Financial Statements

(continued)

4. RELATED PARTY TRANSACTIONS

(continued)

The Management Company will bear the excess of any Operating Expenses above the annual rate. Conversely the Management Company will be entitled to retain any amount by which the annual rate of Operating Expenses exceeds the actual expenses incurred by the SICAV.

Furthermore, the Management Company is entitled to receive an asset management fee (the "Asset Management Fee") as more fully described in the tables from page 256 onwards, which is accrued daily and paid monthly. An Asset Management Fee is not payable for X shares and 4 shares. For the avoidance of doubt, Operating Expenses do not include either Asset Management Fees or performance fees which are separate and distinct.

5. COMMISSION SHARING ARRANGEMENTS

The Management Company and certain Investment Managers may enter into commission sharing arrangements with broker-dealers under which certain business services are obtained from such broker-dealers directly or from third parties and are paid for by the broker-dealers out of the commissions they receive on transactions for the SICAV. Consistent with obtaining best execution, brokerage commissions on portfolio transactions for the SICAV may be specifically allocated by the Management Company or each relevant Investment Manager to broker-dealers in consideration of any research services rendered as well as for services rendered in the execution of orders by such broker-dealers. Additional information on each Investment Manager's practices with respect to commission sharing arrangements is detailed in the section of the prospectus with the heading "Investment Management Arrangements".

Any commission sharing arrangement entered into by the Management Company or an Investment Manager will operate under the following conditions: (i) the Management Company or the Investment Manager will act at all times in the best interest of the SICAV and of its shareholders when entering into commission sharing arrangements; (ii) the services provided will be in direct relationship to the activities of the Management Company or Investment Manager; (iii) brokerage commissions on portfolio transactions for the SICAV will be allocated by the Management Company or the Investment Manager to broker-dealers that are entities and not to individuals; (iv) commission sharing arrangements are not a determining factor in the selection of the broker-dealers; (v) the Management Company or the Investment Manager will provide reports to the Directors with respect to commission sharing arrangements including the nature of the services it receives; (vi) neither the Management Company, the Investment Manager nor any of their connected persons may retain cash or other rebates from broker-dealers; (vii) the goods or services received are of demonstrable benefit to the shareholders.; and (viii) periodic disclosure will be made in the SICAV's annual report in the form of statement describing any such commission sharing arrangements, including a description of the goods and services received. The goods and services received may include: research that can add value to an Investment Manager's decision making process and execution services that enhance the Investment Manager's ability to execute transactions.

Only the Investment Manager Columbia Management Investment Advisers, LLC may enter into commission sharing arrangements.

6. DIVIDENDS

The SICAV declared the following dividends during the year ended March 31, 2026:

Portfolios	Share class	Ex-date	Share class currency	Amount per share (in the share class currency)	Total amount (in the Portfolio currency)

7. PERFORMANCE FEES

The Management Company shall receive a performance fee as set forth below with respect to the share classes of the Portfolios listed in the table below. Daily provisions shall be set up for the accrual of the performance fee in respect of the performance fee balance (as described below), whereby the amount accrued shall be paid to the Management Company at the end of each calendar year (i.e. December 31). The Management Company is responsible for paying all or part of the performance fee to the Investment Managers in accordance with their Investment Management agreement. The amount of this performance fee depends on the performance of the Net Asset Value of the relevant share class within the relevant Portfolio compared to the performance of the relevant performance index (the "Performance Index", as per the table below). The Performance Index is subject to a minimum rate of return, to ensure that the Portfolios must deliver a minimum positive rate of return for a performance fee to be paid, in the event that the underlying benchmark return is negative. Accruals will only be made when the performance fee balance is positive and the NAV High Water Mark (defined below) is exceeded.

The performance reference period for each share class is the whole life of the share class, i.e. from launch until termination.

In the event of a redemption of share class, any accrued performance fee attributable to the redeeming shareholder's holding will be crystallized at the time of the redemption and will be paid at the end of each calendar year.

Notes to the Financial Statements
(continued)

7. PERFORMANCE FEES
(continued)

Performance of share classes includes dividends paid.

Portfolios	Share classes	Performance index	Performance rate
CT (Lux) Global Investment Grade Credit Opportunities[1]	J Y	Higher of Compounded euro short-term rate (€STR) average rate, 1 month tenor plus 1.00%, subject to a minimum of 1.00%	10%
CT (Lux) Pan European Absolute Alpha	A D I L Z	Higher of 3 month Euro Interbank Offered Rate (EURIBOR)[2] plus 1.50%, subject to a minimum of 1.50%	20%

[1]*See note 1.*
[2]*The benchmark is provided by the European Money Markets Institute, an administrator included in the ESMA register of benchmark administrators. The Management Company maintains a written plan setting out the actions that will be taken in the event of the benchmark materially changing or ceasing to be provided. This plan is available on request from the Management Company.*

The performance of the CT (Lux) Global Investment Grade Credit Opportunities Portfolio and the CT (Lux) - Pan European Absolute Alpha Portfolio, including the impact of all applicable fees, is compared to the Performance Index.

NAV High Water Mark: in respect of each share class, is the Net Asset Value of a share of such share class as at the last Valuation Date of the last relevant calendar year in which any accrued performance fee was paid. If a performance fee has never been paid, the NAV High Water Mark is the inception price of the relevant share class. The NAV High Water Mark can only be increased, and cannot be decreased under any circumstances.

The performance fee balance shall be calculated on the difference between the performance of the Performance Index and the performance of the share class concerned (the "Daily Difference"):

i) in the event the Daily Difference is positive, the performance fee balance will increase by an amount in respect of the Daily Difference, at the relevant performance rate;

ii) if the Daily Difference is negative, the performance fee balance will be reduced by an amount in respect of the Daily Difference, at the relevant performance rate.

If the performance fee balance is positive at the end of the calendar year, i.e. December 31, and the NAV High Water Mark has been exceeded, the accrued amount of the performance fee will be paid to the Management Company within the first quarter of the subsequent calendar year. A performance fee shall only be paid to the Management Company if the Net Asset Value of the relevant share class exceeds the NAV High Water Mark and the performance fee balance is positive.

If at the end of the calendar year the performance fee balance is negative and the NAV High Water Mark has not been exceeded, such negative amount will be carried forward and the Management Company shall not receive the payment of a performance fee until the amount of the accrued performance fee balance is positive and the NAV High Water Mark has been exceeded, at any subsequent calendar year's end.

If at the end of the calendar year the performance fee balance is negative and the NAV High Water Mark has been exceeded, such negative amount will be carried forward and the Management Company shall not receive the payment of a performance fee until the amount of the accrued performance fee balance is positive and the NAV High Water Mark has been exceeded, at any subsequent calendar year's end.

In the event that a Portfolio or a share class is liquidated or a Portfolio or share class becomes dormant, any outstanding performance fee accrual shall be realised and payable to the Management Company. Thereafter, when new shareholders have invested in such a Portfolio or share class, the performance fee balance will be reset.

There is no maximum value on the performance fee that could be taken.

As at March 31, 2026, no performance fees have been paid.

8. NET UNREALISED GAIN/(LOSS) ON FORWARD CURRENCY EXCHANGE CONTRACTS

As at March 31, 2026, the SICAV has the following forward currency exchange contracts outstanding:

[1] The commitment on short call positions is unlimited.

12. CHANGES IN PORTFOLIO STATEMENTS COMPOSITION

Changes in the Portfolio statements are available to shareholders upon request and free of charge at the registered office of the SICAV.

13. DILUTION ADJUSTMENT

The Portfolios may suffer reduction of the Net Asset Value per share due to dealing spreads, transaction costs and tax charges that arise when purchases and sales of underlying investments are undertaken by the Investment Manager to accommodate cash inflows and outflows; this is known as "dilution". A dilution adjustment may be applied to protect the shareholders of the Portfolios by countering the impact of dilution (the "Dilution Adjustment"). If the net capital activity (including subscriptions, redemptions and conversions into a given Portfolio) on a given Valuation Date exceeds the threshold set by the Management Company from time to time for that Portfolio, the Net Asset Value of the Portfolio may be adjusted upwards or downwards to reflect the net inflows and net outflows respectively.

The Net Asset Value per share of each share class in the Portfolio is calculated separately but any Dilution Adjustment will have an identical effect on the Net Asset Value per share of each share class of the Portfolio. The amount of Dilution Adjustment will be set by the Management Company to reflect the estimated dealing spreads, transaction costs and tax charges that may be incurred by the Portfolio; these costs can vary with market conditions and the portfolio composition. The Dilution Adjustment may therefore be amended from time to time. Such Dilution Adjustments may vary from Portfolio to Portfolio and between daily net inflows and outflows but will not exceed 2% of the original Net Asset Value per share. A periodic review is undertaken in order to verify the appropriateness of the Dilution Adjustments being applied. In the usual course of business the application of Dilution Adjustment will be triggered mechanically and on a consistent basis, however the Management Company reserves the right to make a discretionary Dilution Adjustment if, in its opinion, it is in the interests of existing shareholders to do so, including in the event of exceptional circumstances. Such exceptional circumstances include, but are not limited to, periods of elevated market volatility, and periods of depressed market liquidity.

The Dilution Adjustment may be applied across all Portfolios with the exception of the CT (Lux) Enhanced Commodities Portfolio.

Estimates of the amount of Dilution Adjustment based on securities held in each Portfolio and market conditions will be published on the website www.columbiathreadneedle.com, under the "Fees & Charges" section for the relevant Portfolio.

During the reporting year, Dilution Adjustments have been applied to the following Portfolios:
-CT (Lux) Global Corporate Bond
-CT (Lux) European Corporate Bond
-CT (Lux) European High Yield Bond
-CT (Lux) European Short-Term High Yield Bond
-CT (Lux) European Social Bond
-CT (Lux) Global Emerging Market Short-Term Bonds
-CT (Lux) US High Yield Bond
-CT (Lux) Global Emerging Market Equities
-CT (Lux) Global Select
-CT (Lux) Global Smaller Companies

Notes to the Financial Statements

(continued)

14. TRANSACTION COSTS

(continued)

Portfolios	Currency	Transaction costs
CT (Lux) Pan European Absolute Alpha	EUR	16,771
CT (Lux) American Extended Alpha	USD	456
CT (Lux) Global Extended Alpha	USD	21,191
CT (Lux) Global Real Estate Securities[1]	USD	173
CT (Lux) Enhanced Commodities[2]	USD	n/a

[1]*See note 1.*

[2]*For fixed income securities, transaction costs are not separately identifiable from the purchase price of the security and therefore cannot be disclosed separately.*

Transaction costs are included in the total cost of investment disclosed in the Portfolio Statements. The amount of transaction costs supported by the SICAV during the reporting year is included in the Statement of Operations and Changes in Net Assets under the heading "Net realised gain/(loss) on sales of investments" and "Change in net unrealised gain/(loss) on investments".

15. COLLATERAL INFORMATION

The table below provides the cash collateral balances received and paid by the Portfolios as at March 31, 2026:

Portfolios	Counterparty	Investment Type	Currency	Cash collateral
Collateral received by the Portfolio				
CT (Lux) European Short-Term High Yield Bond	State Street Bank And Trust Company	Forwards	EUR	440,000

No securities were pledged or received as collateral as at March 31, 2026.

Notes to the Financial Statements

(continued)

16. CROSS INVESTMENT IN PORTFOLIOS

As at March 31, 2026, the CT (Lux) Global Dynamic Real Return Portfolio invests in shares of the following Portfolio:

Cross Investment Portfolio	Currency	Market Value	% of Net Assets in Base Currency of the Cross Investment Portfolio
CT (Lux) Enhanced Commodities	USD	874,668	0.31
CT (Lux) Global Emerging Market Short-Term Bond	USD	1,713,230	4.19

As at March 31, 2026, the CT(Lux) Global Multi Asset Income Portfolio invests in shares of the following Portfolio:

Cross Investment Portfolio	Currency	Market Value	% of Net Assets in Base Currency of the Cross Investment Portfolio
CT (Lux) European Short-Term High Yield Bond	USD	2,656,552	2.21

The impact of the cross investment transactions has been eliminated from the aggregated Statement of Net Assets and the Statement of Changes in Net Assets.

Please also refer to note 2 xi) which covers asset management fees and rebates for cross investments.

17. TERM DEPOSITS

The table below provides the term deposits amounts held by the SICAV as at March 31, 2026:

Portfolios	Counterparty	Currency	Term Deposit Amount (in the Portfolio base currency)
CT (Lux) European Social Bond	Mitsubishi UFJ Securities	EUR	6,607,604
	Total	**EUR**	**6,607,604**
CT (Lux) Flexible Asian Bond	Mitsubishi UFJ Securities	USD	3,010,411
	Total	**USD**	**3,010,411**
CT (Lux) American Select	Mitsubishi UFJ Securities	USD	1,506,074
	Total	**USD**	**1,506,074**
CT (Lux) Asian Equity Income	Mitsubishi UFJ Securities	USD	202,203
	Total	**USD**	**202,203**

18. OTHER ASSETS

Other assets may include any reclaims from withholding tax and/or foreign taxes.

19. TOTAL EXPENSE RATIO (TER)

The Total Expense Ratio is calculated following the Asset Management Association Switzerland (AMAS) guideline. The formula applied is the following:

The TER expresses the sum of all costs and commissions charged on an ongoing basis to each class of shares (Operating Expenses) taken retrospectively as a percentage of their net assets, and is calculated using the following formula:

$$\text{TER \%} = \frac{\text{Total Operating Expenses}}{\text{Average net assets}} \times 100$$

Where a Portfolio invests more than 10% in other collective investment schemes (target funds), the calculation includes the Portfolio's share of the expenses of the target funds less any rebates received.

The Total Expense Ratios for the year ended March 31, 2026 are as follows:

Portfolios	Share class	TER/TER[1]
CT (Lux) Global Corporate Bond	AEC	0.80%
	AEH	0.80%

[1]*The TER is inclusive of performance fees.*
[2]*The current TER differs from the full year expected TER due to the small size of shareclass.*
[3]*The current TER differs from the full year expected TER due to the big variation of the average NAV.*
[4]*See note 1.*

20. OTHER INFORMATION

The SFDR periodic disclosures are included in the Annexes to the financial statements.

21. SUBSEQUENT EVENTS

From April 1, 2026 the Operating Expenses for I share classes of the CT (Lux) US Contrarian Core Equities Portfolio have been reduced from 0,25% to 0,20%.

Effective June 29, 2026, Registrar and Transfer Agent SS&C Administration Services Luxembourg will change the address to:
SS&C Administration Services Luxembourg S.A.
5, Rue Jean Monnet
L-2180 Luxembourg
Grand Duchy of Luxembourg

Effective July 1, 2026, Depositary, Domiciliary, Administrative and Paying Agent State Street Bank International GmbH, Luxembourg Branch will change the address to:
State Street Bank International GmbH, Luxembourg Branch
17, Boulevard de Kockelscheuer
L-1821 Luxembourg
Grand Duchy of Luxembourg

Global Risk Exposure (unaudited)

Global Exposure and Leverage

The UCITS global exposure is managed under a commitment approach, an absolute Value at Risk (absolute VaR) approach or a relative Value at Risk (relative VaR) approach.

The global market risk exposure information for the year ended March 31, 2026 is as follows:

Commitment approach

In order to monitor and measure the global exposure, all the Portfolios which are not under the VaR approach use the commitment approach. The global exposure of the Portfolios is calculated based on the commitment approach in accordance with the methodology described in the ESMA's guidelines 10-788.

Var approach

Using the period April 2025 - March 2026:

							1-year Rolling			
Portfolios using VaR basis	**Calculation method***	**VaR model***	**Reference Portfolio**	**VaR internal guidelines (%)**	**VaR legal and contractual limit (%)**	**Lowest utilisation of VaR limit**	**Highest utilisation of VaR limit**	**Average utilisation of VaR limit**	**Average commitment exposure**	**Average sum of notionals**

Shareholders' Information (unaudited)

The SICAV is an investment company organised as a "*Société d'Investissement à Capital Variable*" in the Grand Duchy of Luxembourg under the Law of August 10, 1915, as amended, and qualifies as an Undertaking for Collective Investment in Transferable Securities ("UCITS") under Part I of the law of December 17, 2010, as amended.

The SICAV was incorporated on February 10, 1995 for an unlimited period. The SICAV's articles of incorporation were first published in the Recueil des Sociétés et Associations of the Grand Duchy of Luxembourg on March 31, 1995 and were last amended effective on November 20, 2023 to reflect the new name of the SICAV and its Portfolios, among other changes.

The SICAV is registered under the Number R.C.S. Luxembourg B-50216.

The annual general meeting of shareholders of the SICAV is held in Luxembourg as may be specified in the notice of meeting, within six months of the accounting year end. The annual general meeting may be held abroad if, in the absolute and final judgment of the Board, exceptional circumstances so require. Other meetings of shareholders may be held at such place and period of notice as may be specified in the respective notices of meeting. Notices of general meetings are given in accordance with Luxembourg law and in accordance with applicable rules in the relevant countries where shares are publicly offered for sale. Notices will specify the place and time of the meeting, the conditions of admission, the agenda, the quorum and voting requirements.

The accounting year of the SICAV terminates on March 31 in each year.

The annual report and audited financial statements and the unaudited interim report are available at the registered office of the SICAV and at the principal office of each paying agent and distributor. The combined accounts of the SICAV are expressed in U.S. Dollars.

The Net Asset Value per class of each Portfolio and the offering and redemption prices are made public at the registered office of the SICAV.

This report does not constitute an offer or a solicitation of an offer to buy shares in the SICAV. Subscriptions are accepted only on the basis of the current Prospectus and/or Information document for retail and insurance-based investment products (the "PRIIPs KID") accompanied by the most recent annual report and any subsequent interim report of the SICAV, when issued.

Certain Portfolios and/or share classes contained within this report may not be authorised or offered for sale in every jurisdiction at this time.

Significant/Global Events

Significant local, regional or global events such as terrorism, civil conflicts and war, natural disasters, disease/virus outbreaks and epidemics or other public health issues, recessions, depressions or other events – or the potential for such events – could have a significant negative impact on the global economic and market conditions. These and other related events could have a negative impact on Portfolio performance and the value of an investment in the Portfolios.

Information Document ("PRIIPs KID", formerly Key Investor Information Document) - Subscription requirements

The PRIIPs KID is a pre-contractual document and investors will have to confirm that they have read the latest PRIIPs KID before making a subscription. The Management Company has the right to reject a subscription if the investor does not confirm that they have read the latest PRIIPs KID at the time of application. The latest PRIIPs KID may be obtained from www.columbiathreadneedle.com.

Task force on Climate-related Disclosures ("TCFD")

TCFD information for the Portolios covered by this report has been made available on the relevant Portfolio details or document library pages of our website and can be found at www.columbiathreadneedle.com.

REMUNERATION DISCLOSURES

This disclosure is made in respect of the Group's Remuneration Policy as it applies to Threadneedle Management Luxembourg S.A. ("the Manager") in respect of the Undertakings for Collective Investment in Transferable Securities ("UCITS") Directive and other applicable rules and guidance.

The Remuneration Policy applies to all of the Company's subsidiary entities to which the UCITS Directives requirements apply, and was last approved by the Remuneration Committee in June 2025.

1. The Remuneration Committee

The Remuneration Committee of the UK HoldCo ("the Committee") is a sub-committee of the UK HoldCo Board with the responsibility to establish the philosophy and objectives that will govern the Group's compensation and benefit programmes; review and approve compensation and benefit plans, policies, and practices; and oversee and approve the Group's remuneration. It has been determined to be independent of the day-to-day executive management of the Group, its Members being Directors of the Group or senior members of the Executive Leadership Team of Ameriprise Financial, the Group's parent company, all of whom do not hold executive positions for the UK HoldCo.

Current Committee Members are Mr Walter Berman, Mr Charles Porter and Ms Kelli Hunter Petruzillo. Meetings are normally held in January, March, June, September and December. The Global Head of Compensation acts as Secretary to the Committee. The Committee may invite the attendance of any Group employee or functional expert from the parent company as deemed appropriate, to allow it to fulfil its responsibilities including ensuring remuneration is consistent with effective risk management and does not encourage excessive risk taking.

Shareholders' Information (unaudited)

(continued)

2. Determining Incentive Remuneration Pools

The Manager made its annual Total Incentive Award decisions from separate pools covering the Real Estate business, Distribution unit, Investments business and Support functions, ultimately aggregated for governance and oversight at the EMEA regional level. Those pools are determined at the Company's discretion, subject to final oversight and approval from the Remuneration Committee. The pools for Real Estate, Distribution and Investments Special Incentive Plans (the "SIPs") are determined with reference to four un-weighted factors being a 'Top-Down' assessment of market practice, legal and regulatory requirements and any other internal or external contextual factors; a 'Bottom-Up' calculation based on business performance against Plan and Target Incentive level for the firm (see 'Pay for Performance' below); the overall financial and strategic performance of the Group; and the financial and strategic performance of Ameriprise Financial as the Group's parent company and shareholder. The funding for support roles forms part of the global 'AIA' plan, with funding to each region and business determined by a comprehensive balanced Business Unit Assessment in context of the overall Ameriprise Financial group's performance. All pools are set in context of the risk and control environment maintained during the year and may be adjusted top-down to reflect any material issues in that regard. The Committee also receives ongoing reports through the year from the Risk function regarding risk assessments and any themes or areas of note related to risk control or risk-related behavioural concerns.

The Committee takes all of these factors into account in order to make a balanced decision on its oversight and approval of the Total Incentive pools for the year in question.

3. Determining Individual Total Incentive Awards

Individual reward decisions under all incentive plans are wholly discretionary, although strongly informed by the annual performance appraisal and by known market remuneration levels for equivalent jobs as well as by the pool funding available. Risk and Compliance provide a critical input to final performance rating setting, ensuring that any risk and relevant behavioural concerns are reflected in performance appraisals and subsequently in remuneration recommendations. The EMEA Heads of Risk and Compliance also report directly to the Remuneration Committee of the award process to ensure that the Committee receives a direct report on which to base its final risk adjustment decisions.

Base salaries are maintained at a market-competitive level in order to ensure that, if required, it is possible to award zero incentive.

Pay for Performance

The bottom-up element of the SIP pool determination process measures team and wider business performance against key business targets for each area of the Group, including longer-term investment performance for the Investments and Real Estate divisions and a mix of gross and net sales for Distribution. Investment performance is assessed against each fund's benchmarks and its risk profile. All such assessments' impacts on the bottom-up calculation are capped, and weighted more heavily to longer time periods, so as not to incentivise managers to take excessive risk in order to deliver higher incentive pools. While the Group and parent company financial and strategic results are important factors in pool determination, the model is set up to ensure that delivery of the business' core goals, including delivering investment performance to its customers, is an explicit and significant driver in pool determination for those divisions.

Individual discretionary awards from the available funding, in context of market-competitive reward levels for the job in question, are driven strongly by each individual's ratings against Goals (objectives) and the Group's behavioural Leadership expectations (our Values), each of which is separately rated on a 5-point scale to ensure the behavioural assessment is given due prominence. Goals focus on the key deliverables for the role that year, in particular on the delivery of investment performance for Investments employees and for the Property division: all employees are also managed against a mandatory Risk Management Goal. Investment performance, where relevant to the role, is assessed against each fund's benchmark and its risk profile.

Ratings are consistency-checked across the business with the input of the EMEA Heads of Risk and Compliance providing input as required to ensure balance and due reflection of risk management. For Sales, Real Estate and Investment incentives there is no pre-determined grid or formula driving awards, which are discretionary in order to be able to account for and reflect all relevant factors.

Delivery of Total Incentives

The Group believes that deferred awards for higher earners and risk takers are a matter of good practice and an important part of aligning key staff's interests with the long-term interests of customers and shareholders. To that end, Total Incentive awards for all employees in the Group may be delivered partly in deferred awards through the Ameriprise Financial Long-Term Incentive Award ("LTIA") programme and, for Code Staff/Identified Staff and those in the Investments division, through a fund deferral programme. Deferrals, and delivery of awards in instruments, will comply with relevant regulatory requirements in force from time to time.

Staff qualifying as Code Staff/Identified Staff and those of a comparable level of seniority are subject to a higher rate of deferral. 50% of the overall incentive award is delivered in fund-linked units subject to a holding period after delivery. The fund linked units are designed to reflect the performance of a cross section of products and asset classes within the region.

4. Identified Staff

Code Staff/Identified Staff are classified as Senior Management, individuals with a material impact on the risk profile of UCITS, individuals within control functions and other employees whose total remuneration takes them in to the same bracket as senior management and risk takers, whose professional activities have a material impact on the risk profiles of the Manager or of the funds it manages. In practice, this will include the named Fund Managers of the Manager's funds.

5. Remuneration Payment Disclosure

The performance period for remuneration operates on a calendar year basis.

Total remuneration paid by the Group to 24 UCITS V Remuneration Code Staff Senior Managers in respect of its UCITS activities in the 2025 performance year was £3.05m, of which £1.22m was fixed and £1.83m was variable. Total remuneration paid to other members of the UCITS

Shareholders' Information (unaudited)

(continued)

Remuneration Code Staff whose actions had a material impact on the risk profile of the Manager was £11.73m, of which £3.32m was fixed and £8.41m was variable. Total Remuneration paid to delegated managers of UCITS regulated funds was £1.89m, of which £0.06m was fixed and £1.83m was variable.

Information for Investors in Switzerland (unaudited)

In Switzerland, the prospectus, PRIIPs KIDs, Articles, Annual and Interim Reports and/or any such documents, which are required for the approval in compliance with the applicable foreign law, may be obtained free of charge from the Swiss Representative and Paying Agent CACEIS Bank, Montrouge, Zurich Branch/Switzerland, Bleicherweg 7, CH 8027 Zurich, Switzerland.

Past performance is no indication of current or future performance, and the performance data do not take account of the commissions and costs incurred on the issue and redemption of shares.

AE	iBoxx Euro Corporate Bond Index		3.02%	2.25%	4.54%	3.94%	8.19%	8.64%

Note: Total performance is historical and is not a guarantee of future results. The net asset value of shares classes may go up or down. Performance is net of all applicable fees as well as distributions made during the calendar year ended December 31 (but does not reflect a sales charge as stated in the note 4 to the financial statements). The performance is different across share classes depending on applicable asset management and shareholder servicing fees as disclosed in the note 4 to the financial statements. In addition, currency fluctuations may also affect performance depending on the currency of denomination of the share class and the base currency of the Portfolio. The returns are stated in the currency in which the portfolios are denominated.

Note: Total performance is historical and is not a guarantee of future results. The net asset value of shares classes may go up or down. Performance is net of all applicable fees as well as distributions made during the calendar year ended December 31 (but does not reflect a sales charge as stated in the note 4 to the financial statements). The performance is different across share classes depending on applicable asset management and shareholder servicing fees as disclosed in the note 4 to the financial statements. In addition, currency fluctuations may also affect performance depending on the currency of denomination of the share class and the base currency of the Portfolio. The returns are stated in the currency in which the portfolios are denominated.

Note: Total performance is historical and is not a guarantee of future results. The net asset value of shares classes may go up or down. Performance is net of all applicable fees as well as distributions made during the calendar year ended December 31 (but does not reflect a sales charge as stated in the note 4 to the financial statements). The performance is different across share classes depending on applicable asset management and shareholder servicing fees as disclosed in the note 4 to the financial statements. In addition, currency fluctuations may also affect performance depending on the currency of denomination of the share class and the base currency of the Portfolio. The returns are stated in the currency in which the portfolios are denominated.

Note: Total performance is historical and is not a guarantee of future results. The net asset value of shares classes may go up or down. Performance is net of all applicable fees as well as distributions made during the calendar year ended December 31 (but does not reflect a sales charge as stated in the note 4 to the financial statements). The performance is different across share classes depending on applicable asset management and shareholder servicing fees as disclosed in the note 4 to the financial statements. In addition, currency fluctuations may also affect performance depending on the currency of denomination of the share class and the base currency of the Portfolio. The returns are stated in the currency in which the portfolios are denominated.

Note: Total performance is historical and is not a guarantee of future results. The net asset value of shares classes may go up or down. Performance is net of all applicable fees as well as distributions made during the calendar year ended December 31 (but does not reflect a sales charge as stated in the note 4 to the financial statements). The performance is different across share classes depending on applicable asset management and shareholder servicing fees as disclosed in the note 4 to the financial statements. In addition, currency fluctuations may also affect performance depending on the currency of denomination of the share class and the base currency of the Portfolio. The returns are stated in the currency in which the portfolios are denominated.

Securities Financing Transaction Regulation (unaudited)

The Securities Financing Transaction Regulation ("SFTR") introduces reporting requirements for securities financing transactions ("SFTs") and total return swaps. A SFT is defined as per Article 3(11) of the SFTR as:

- a repurchase/reverse repurchase agreement;
- securities or commodities lending and securities or commodities borrowing;
- a buy-sell back transaction or sell-buy back transaction; or
- a margin lending transaction.

As at March 31, 2026, the SICAV held total return swaps ("TRS") as type of instruments in scope of the SFTR.

Global data

Name of Portfolio	Type of asset	Unrealised gain and loss in the Portfolio base currency and in absolute value	% of Net Assets
CT (Lux) Enhanced Commodities	TRS	8,913,934	3.19

Data on collateral reuse
There was no collateral reuse during the year ended March 31, 2026.

Concentration data
All collateral received in respect of TRS as of March 31, 2026 is cash collateral. The ten largest issuers disclosure is therefore not applicable.

The following table provides details of the top ten counterparties (based on gross volume of outstanding transactions) in respect of TRS held per Portfolio as at March 31, 2026:

Name of Portfolio	Type of asset	Counterparty	Unrealised gain and loss in the Portfolio base currency and in absolute value
CT (Lux) Enhanced Commodities	TRS	Goldman Sachs	4,064,471
		JPMorgan	2,826,359
		Macquarie	2,023,104

Aggregate transaction data

Name of Portfolio	Type of collateral	Maturity tenor (collateral)	Currency of collateral	Maturity tenor (SFT/TRS)	Country of establishment (counterparty)	Settlement and clearing	Quality of collateral
CT (Lux) Enhanced Commodities	Cash	Open maturity	USD	1 day to 1 month / 1 month to 3 months / 3 months to 1 year	UK	Bilateral	N/A - Cash

Safekeeping of collateral granted
Cash and security collateral paid to the counterparties is delivered to segregated accounts at the counterparty.

The amount of collateral granted for TRS as at March 31, 2026 is as follows:

Name of Portfolio	Type of collateral	Counterparty		Currency of collateral	Amount of collateral	% of collateral held at year-end by category
CT (Lux) Enhanced Commodities	Cash	Goldman Sachs		USD	(200,000)	(0.07)
	Cash	JPMorgan		USD	360,000	0.13
			Total	**USD**	**160,000**	**0.06**

Return/Costs
Return and costs of TRS transactions as at March 31, 2026 are disclosed in the Statement of Operations and Changes in Net Assets of the relevant Portfolio under the headings "Interest expense on swaps", "Net realised gain/(loss) on swaps" and "Change in net unrealised gain/(loss) on swaps".

Independent Limited Assurance Report on Columbia Threadneedle (Lux) I's SFDR periodic reporting

To the Board of Directors of
Columbia Threadneedle (Lux) I

Limited assurance conclusion

We have conducted a limited assurance engagement on the preparation of the periodic reporting according to the Regulation (EU) 2019/2088 ("SFDR") on sustainability-related disclosures in the financial sector (the SFDR periodic reporting) for all sub-funds of Columbia Threadneedle (Lux) I (the "Fund") classified as Article 8 and Article 9 according to SFDR for the year ended 31 March 2026.

Based on the procedures we have performed and evidence we have obtained, nothing has come to our attention that causes us to believe that the accompanying SFDR periodic reporting for the year ended 31 March 2026 has not been prepared, in all material respects, in accordance with the criteria set out in the Appendix 1 which are based on the requirements from the Article 11 of SFDR as well as the requirements of the Articles 5 and 6 of the Regulation (EU) 2020/852 on the establishment of a framework to facilitate sustainable investment (the "EU Taxonomy") (the "Criteria").

Basis for conclusion

We conducted our limited assurance engagement in accordance with International Standard on Assurance Engagements (ISAE) 3000 (Revised), Assurance Engagements Other Than Audits or Reviews of Historical Financial Information (ISAE 3000 (Revised)), issued by the International Auditing and Assurance Standards Board as adopted for Luxembourg by the "Institut des Réviseurs d'Entreprises" (IRE).

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion. Our responsibilities under this standard are further described in the Responsibility of the "Réviseur d'entreprises agréé" section of our report.

PricewaterhouseCoopers Assurance, Société coopérative,
2 rue Gerhard Mercator, L-2182 Luxembourg
T : +352 494848 1, F : +352 494848 2900, www.pwc.lu

Cabinet de révision agréé. Expert-comptable (autorisation ministérielle n°10181659)
R.C.S. Luxembourg B294273 - TVA LU36559370

Our independence and quality management

We have complied with the independence and other ethical requirements of the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the "Commission de Surveillance du Secteur Financier" (CSSF), which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

The firm applies International Standard on Quality Management 1, as adopted for Luxembourg by the CSSF, which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Other matter

Any comparative information of the Fund that relates to a period prior to 31 March 2024 has not been subject to any assurance engagement in accordance with ISAE 3000 (Revised). Our conclusion is not modified in respect of this matter.

Responsibilities of the Board of Directors for the SFDR periodic reporting

The Board of Directors is responsible for:

- preparing the SFDR periodic reporting in accordance with the Criteria;
- designing, implementing and maintaining such internal control as the Board of Directors determines is necessary to enable the preparation of the SFDR periodic reporting, in accordance with the Criteria, that is free from material misstatement, whether due to fraud or error; and
- selecting and applying appropriate sustainability reporting methods and making assumptions and estimates that are reasonable in the circumstances.

Inherent limitations in preparing the SFDR periodic reporting

The absence of a significant body of established practice on which to draw to evaluate and measure non-financial information allows for different, but acceptable, measures and measurement techniques and can affect comparability between entities.

Responsibility of the “Réviseur d’entreprises agréé”

Our responsibility is to plan and perform the assurance engagement to obtain limited assurance about whether the preparation of the SFDR periodic reporting is free from material misstatement, whether due to fraud or error, and to issue a limited assurance report that includes our conclusion. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence decisions of users taken on the basis of the SFDR periodic reporting.

As part of a limited assurance engagement in accordance with ISAE 3000 (Revised), we exercise professional judgement and maintain professional scepticism throughout the engagement. We also:

- determine the suitability in the circumstances of the Fund’s use of the Criteria as the basis for the preparation of the SFDR periodic reporting;
- perform risk assessment procedures, including obtaining an understanding of internal control relevant to the engagement, to identify where material misstatements are likely to arise, whether due to fraud or error, but not for the purpose of providing a conclusion on the effectiveness of the Fund’s internal control ; and
- design and perform procedures responsive to where material misstatements are likely to arise in the preparation of the SFDR periodic reporting. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

In the context of our limited assurance engagement, we do not provide any assurance over the source information that the Fund obtained directly from the investments or third-party experts.

Summary of work performed

A limited assurance engagement involves performing procedures to obtain evidence about the preparation of the SFDR periodic reporting. The procedures performed in a limited assurance engagement vary in nature and form, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

The nature, timing and extent of procedures selected depend on professional judgement, including identification of disclosures where material misstatements are likely to arise in the preparation of the SFDR periodic reporting, whether due to fraud or error.

In conducting our limited assurance engagement, we:

- obtained an understanding of the Fund's reporting processes relevant to the preparation of its SFDR periodic reporting;
- evaluated whether all information identified by the process to identify the information reported in the SFDR periodic reporting is included in the SFDR periodic reporting;
- performed inquiries of relevant personnel and analytical procedures on a sample of selected information in the SFDR periodic reporting;
- performed substantive assurance procedures on a sample of selected information in the SFDR periodic reporting;
- compared a sample of selected information in the SFDR periodic reporting with the corresponding disclosures in the financial statements; and
- evaluated the methods for developing estimates.

Restriction on distribution and use

Our report has been prepared solely for the Board of Directors and the Shareholders in accordance with the terms of our engagement letter and is not suitable for any other purpose. We do not accept any responsibility to any other party to whom it may be distributed.

Luxembourg, 21 July 2026

PricewaterhouseCoopers Assurance, Société coopérative

Represented by

Kenny Panjanaden
Réviseur d'entreprises agréé

Appendix 1: Criteria

General Criteria:

- Appropriate use of the Annex IV (for Article 8 products) and Annex V (for Article 9 products) of the Regulation 2022/1288 of 6 April 2022 supplementing Regulation (EU) 2019/2088 of the European Parliament and of the Council with regard to regulatory technical standards, as amended (the "RTS");
- Conformity of the client's Sustainable Finance Disclosure Regulation (SFDR) periodic reporting layout vis-à-vis the general principles for the presentation of information stated in the Article 2 of the RTS;
- Appropriate inclusion of the elements outlined in SFDR Regulation 2019/2088, as amended (the "SFDR Regulation") Art. 11 to the disclosure made in the SFDR periodic reporting;
- All relevant sections of either the Annex IV or V of the RTS, and relevant requirements as defined in the RTS, have been included and responded to;
- Consistency of the qualitative statement of sustainable indicators with the evidence obtained for the numeric information on those indicators;
- Appropriate application of the formula according to the RTS in the following questions:
  - What were the top investments of this financial product?
  - What was the proportion of sustainability-related investments?
- Consistency of the information described in the financial information of the annual report with the SFDR Periodic reporting;
- When applicable, consistency of the information described in the SFDR Periodic reporting with the information disclosed in the pre-contractual documents (Prospectus "Investment policy section" & RTS Annex II-III).

Criteria where at least one Sub-Fund is an article 8 product:

- Appropriate inclusion of the elements outlined in SFDR Regulation 2019/2088 Art. 11 to the methodology related to the promotion of environmental or social characteristics (the "Methodology for E/S characteristics") described in the website disclosure according to SFDR Regulation 2019/2088 Art. 10.1(b);
- Appropriate design of the formulas with the Methodology for E/S characteristics (the "E/S Characteristics Formulas");
- Appropriate application of the E/S Characteristics Formulas.

Criteria where at least one Sub-Fund is having sustainable investments according to the Article 2(17) of the SFDR RTS and opt to report a 0% Taxonomy alignment:

- Appropriate inclusion of the elements outlined in SFDR Regulation 2019/2088 Art. 2(17) to the methodology (the "Sustainable Investments Methodology") described in the website disclosure according to SFDR Regulation 2019/2088 Art. 10.1(b);
- Appropriate design of the formula with the Sustainable Investments Methodology (the "SFDR Sustainable Investments Formulas");
- Appropriate application of the SFDR Sustainable Investments Formulas.

Criteria where at least one Sub-Fund is having sustainable investments according to the Article 3 of the EU Taxonomy Regulation 2020/852 and not per SFDR Article 2(17):

- Appropriate application of the methodology outlined in EU Taxonomy Regulation 2020/852;
- Appropriate design of the formula with the EU Taxonomy Regulation 2020/852 (the "EU Taxonomy Formulas");
- Appropriate application of the EU Taxonomy Formulas.

Criteria where at least one Sub-Fund is having sustainable investments according to the Article 2(17) of the SFDR RTS and opt to report following the EU Taxonomy:

- Appropriate inclusion of the elements outlined in SFDR Regulation 2019/2088 Art. 2(17) to the methodology (the "Sustainable Investments Methodology") described in the website disclosure according to SFDR Regulation 2019/2088 Art. 10.1(b);
- Appropriate design of the formula with the Sustainable Investments Methodology (the "SFDR Sustainable Investments Formulas");
- Appropriate application of the methodology outlined in EU Taxonomy Regulation 2020/852;
- Appropriate design of the formula with the EU Taxonomy Regulation 2020/852 (the "EU Taxonomy Formulas");
- Appropriate application of the SFDR Sustainable Investments Formulas and EU Taxonomy Formulas.

Criteria where at least one Sub-Fund is opting to report the Principal Adverse Impact:

- Appropriate design of the formulas with the elements outlined in the Annex I supplementing the EU Regulation 2019/2088 (the "PAI formulas");
- Appropriate application of the PAI formulas.

Criteria where at least one Sub-Fund has designated an index as a reference benchmark:

- Appropriate inclusion of the elements outlined in SFDR Regulation 2019/2088 Art. 11 1. (b) (ii) to the design of the formulas (the "Benchmark Formulas");
- Appropriate application of the Benchmark Formulas;

'ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Social Bond
Legal entity identifier: 5493000LMR3JD1PAQT62

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ **Yes**	☐ **No**
☐ It made **sustainable investments with an environmental objective:** _____	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective:** 97.59%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Until 31 October 2025, the sustainable investment objective of the Portfolio to provide positive social outcomes by investing in bonds that supported or funded socially beneficial activities and development was met, as assessed by the Investment Manager's Social Rating Methodology.

It achieved the social objective by:

(i) Investing in bonds that positively contributed to one or more areas of social outcome (outlined below). These are based on the social hierarchy of needs, whereby "primary" social needs are foundational and supersede more general social needs. The social outcomes are also aligned to the UN Sustainable Development Goals ("SDGs"), as the core global set of priorities for social and sustainable development.

The Investment Manager used a proprietary categorisation and rating model (the "Social Rating Methodology") to carry out a detailed assessment of each bond's contribution to the social objective pursued by the Portfolio. The Investment Manager only selected bonds that are rated as social investments for inclusion in the Portfolio.

Social Outcome Category	**Primary SDG**	**Areas of Social Outcome**
Primary Social Needs	Sustainable Cities and Communities	Affordable Housing e.g. Social bonds (housing focus)
Basic Social Needs	Good Health and Well Being	Health and Welfare e.g. Health services
Social Enabling	Quality Education	Education and Training e.g. Printing and publishing
Social Empowerment	Decent Work and Economic Growth	Employment e.g. Retail
Social Enhancement	Sustainable Cities and Communities	Community e.g. Social bonds (community focus)
Social Facilitation	Reduced Inequalities	Access to Services e.g. Financial services (socially focused)
Societal Developments	Industry, Innovation and Infrastructure	Economic Regeneration and Development e.g. Green bonds

The Investment Manager identifies the social intentionality and purpose of the use of a bond's proceeds and the bond is categorised as A, B or C (A being the highest) according to its level of impact as:

- an impact investment where a bond's use of proceeds has a clear social objective;

- an investment with impact, where a bond's use of proceeds does not have a clear social objective, but where positive social benefit is nonetheless identifiable; or
- development finance where a bond's use of proceeds supports investments in infrastructure and economic development for positive social contribution.

The Investment Manager also assesses the intensity of a bond's social focus by scoring each bond against 9 indicators (such as the bond's ability to tackle deprivation by assessing the target population and region) to produce an overall rating of minor, moderate, good or strong. Any bond rated as, or whose rating falls below, minor is subject to review and may be re-categorised as a fallen angel and is therefore no longer eligible to be held by the Portfolio.

The results of the social assessments are combined to produce an overall social rating which is used by the Investment Manager to construct the portfolio.

(ii) Excluding bonds from issuers that:

- Derived revenue above specific thresholds from industries or activities that the Investment Manager deemed to offer minimal social benefits or to have a high risk of negative outcomes on society and/or the environment;
- Breached accepted international standards and principles of governance as determined by the Investment Manager such as, but not limited to, the United Nations Global Compact, the International Labour Organization Labour Standards, and the United Nations Guiding Principles on Business and Human Rights.

(iii) Engaging with issuers to enhance the Portfolio's social focus and standards. As a bondholder, the Investment Manager actively pursued opportunities to engage with issuers to better understand and positively influence their social value and/or to minimise the negative social impacts of the net zero transition.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used the following sustainability indicators to measure the attainment of the social objective of the Portfolio:

(i) The number of bonds that are categorised and rated as social investments (sustainable investments) under the Social Rating Methodology. During the reporting period, the Portfolio had the following allocation to bonds rated as social investments (sustainable investments) under the Social Rating Methodology:

Social Rating	% of Portfolio
Impact Investments (A)	**54.20%**
Investment with Impact (B)	**37.20%**
Development Finance (C)	**6.20%**

Cash holdings are not shown as a % of net assets in the table above.

(ii) The number of bonds from issuers determined to be in breach of the Portfolio's exclusion criteria. During the reporting period, there were no bonds that breached the Portfolio's exclusion criteria.

The number of bonds that are categorised and rated as social investments have been subject to an assurance review by a third party.

...and compared to previous periods?

The table below shows a like for like breakdown for the Social Ratings over time.

Social Rating	31/10/2025	31/03/2025	31/03/2024
Impact Investments (A)	**54.20%**	**51.90%**	**54.33%**
Investment with Impact (B)	**37.20%**	**39.28%**	**35.19%**
Development Finance (C)	**6.20%**	**7.49%**	**7.26%**

Cash holdings are not shown as a % of net assets in the table above.

In addition, the Portfolio did not breach any of the exclusion criteria during this or previous reporting periods.

The sustainability indicators have been subject to an assurance review by a third party auditor.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

To ensure the sustainable investments do not significantly harm the sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards; (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in potentially harmful activities.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considered and monitored all mandatory PAIs and certain voluntary PAIs, as described below.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm sustainability objectives using an in-house data driven model and investment team due diligence.

The Investment Manager identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Issuers which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine whether significant harm is being caused by the issuer. Where quantitative data is not available, the Investment Manager endeavours to satisfy that no significant harm has taken place through qualitative research.

Depending on the type and materiality of the harm, the Investment Manager will either engage with the issuer to address the harmful practices by taking appropriate action, or limit exposure to such issuers in the Portfolio.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organization on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded bonds from issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the do no significant harm (DNSH) checks also assessed issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the PAIs of its investment decisions for the Portfolio that may negatively harm sustainability factors through a combination of exclusions, monitoring and engaging with investee companies, and investment research.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators. These exclusions relate to fossil fuel exposure, non-renewable energy production, global norms, and controversial weapons for corporate issuers and, freedom of expression and corruption for sovereign and supranational issuers. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Portfolio considered PAIs as part of its stewardship activities. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/10/2025

Largest investments	Sector	% Assets	Country
Nederlandse Financierings-Maatschappij voor Ontwikkelingslanden N.V.	Government Guarantee	2.83%	Netherlands

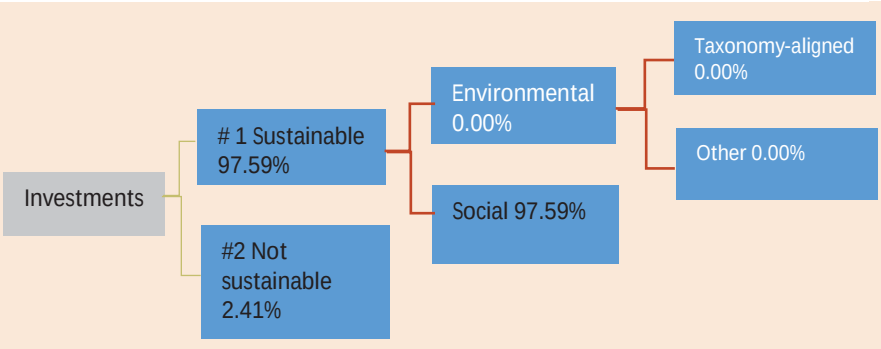
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of securities as part of delivering its investment objective.

0.00% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives:

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

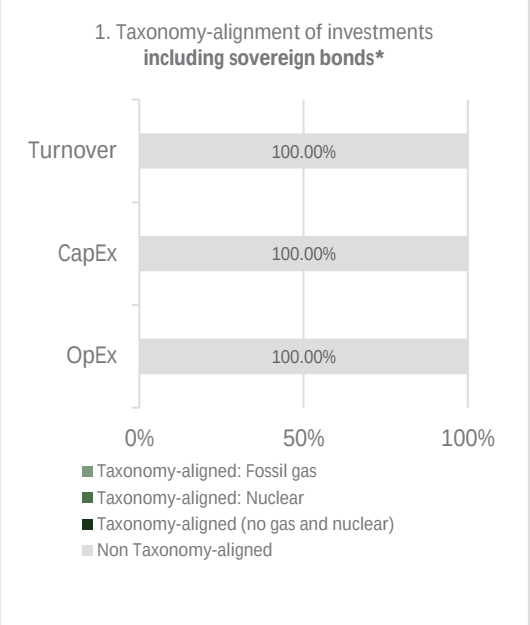
☐ Yes:

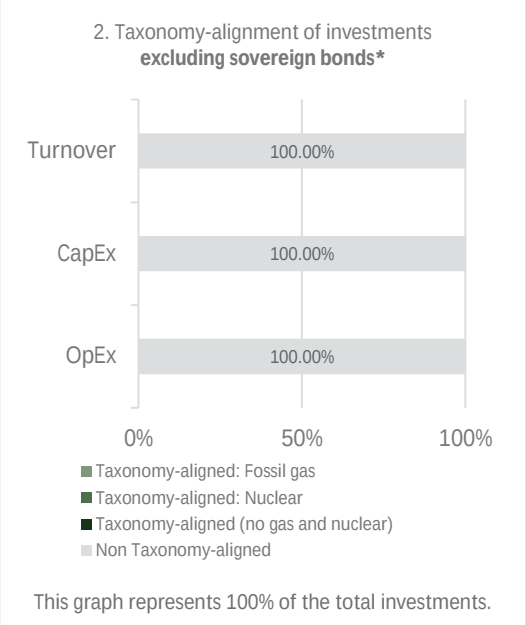
☐ In fossil gas ☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

	31/10/2025	31/03/2025	31/03/2024
EU Taxonomy Alignment	**0.00%**	**0.00%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

0.00% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

97.59% of the sustainable investments had a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "non sustainable" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; and (iii) derivatives held for hedging purposes.

These instruments were not used to meet the sustainable investment objective of the Portfolio. However, minimum environmental or social safeguards are applied to ensure that such instruments do not affect the delivery of the Portfolio's sustainable investment objective. For cash positions and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period there were **25** sustainability related engagement activities with issuers held in the Portfolio. These covered **15** issuers across **8** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change & Energy Transition	GHG Emissions and Energy Performance	**21.43%**
Nature Capital	Biodiversity, Water and Waste	**10.71%**
Human Capital	Social and Employee Matters	**21.43%**
Labour Standards		**46.43%**

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains its sustainable objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How did the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Corporate Bond
Legal entity identifier: 549300SUFYEH07NXZV66

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 45.82% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of issuers with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in issuers that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that an issuer has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on an issuer's financial performance (profits, cash flow etc). Only investments in issuers that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; issuers that are making a positive contribution to society and/or the environment.

- Excluding issuers, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding issuers that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding issuers with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and issuers with direct involvement in nuclear weapons.

- Excluding companies/issuers involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- *How did the sustainability indicators perform?*

  The Portfolio has the following sustainability indicators:

  - The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.40** and the benchmark rating was **2.54** (on a scale of 1-5, where lower is better).

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

- The Portfolio maintained over **50%** of its holdings in strongly rated issuers over the reporting period. On 31 March 2026, the Portfolio held **80.21%** in strongly rated issuers[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **45.82%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded issuers that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded issuers that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of issuers with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

- ***...and compared to previous periods?***

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.40 vs 2.54**	**2.42 vs 2.54**	**2.40 vs 2.52**
At least 50% of the Portfolio in strongly rated issuers[3]	**80.21%**	**79.59%**	**76.00%**
At least 20% of the Portfolio in sustainable investments	**45.82%**	**44.81%**	**38.73%**
The number of issuers determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of an issuer to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps issuers' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where an issuer's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that an issuer offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of an issuer's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within an issuer's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of issuers in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. issuers which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or issuer engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee issuers.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee issuers on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
JPMorgan Chase & Co.	Banking	2.44%	United States

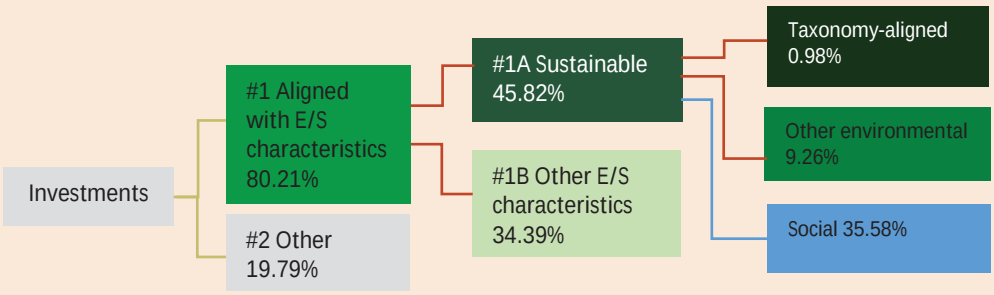
What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.98% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by issuers on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

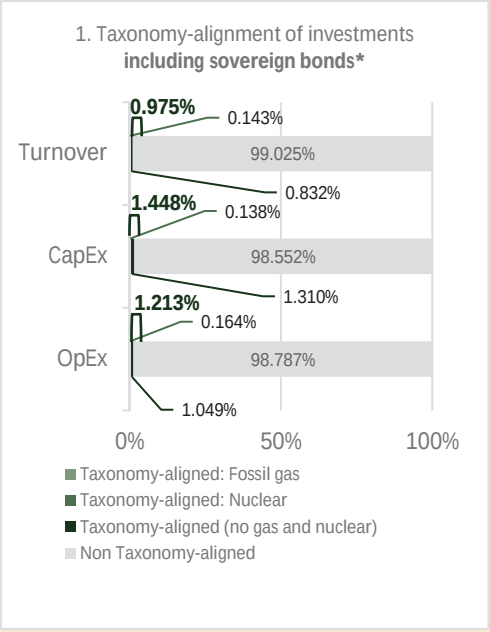
☒ Yes:

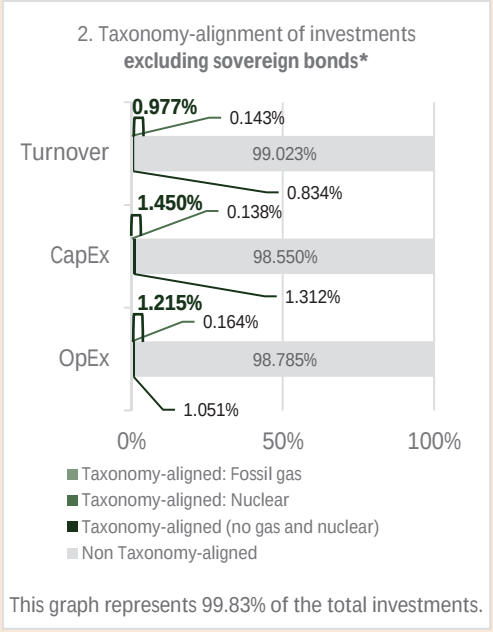
☐ In fossil gas ☒ In nuclear energy

☐ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





This graph represents 99.83% of the total investments.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.14% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.65% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024
EU Taxonomy Alignment	**0.98%**	**1.24%**	**0.40%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.26% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

35.58% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for issuers that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **107** environmental and/or social specific engagement activities with issuers held in the Portfolio. These covered **56** issuers across **11** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**32.12%**
Environmental Stewardship	Biodiversity, Water and Waste	**13.87%**
Human Rights	Social and Employee Matters	**24.09%**
Labour Standards		**29.93%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) European Corporate Bond
Legal entity identifier: 549300MRKNETV49EZ274

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.18% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of issuers with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in issuers that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that an issuer has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on an issuer's financial performance (profits, cash flow etc). Only investments in issuers that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; issuers that are making a positive contribution to society and/or the environment.

- Excluding issuers, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding issuers that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding issuers with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and issuers with direct involvement in nuclear weapons.

- Excluding companies/issuers involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

- *How did the sustainability indicators perform?*

  The Portfolio has the following sustainability indicators:

  - The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.19** and the benchmark rating was **2.39** (on a scale of 1-5, where lower is better).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

[1]The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

- The Portfolio maintained over **50%** of its holdings in strongly rated issuers over the reporting period. On 31 March 2026, the Portfolio held **84.34%** in strongly rated issuers[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **57.18%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded issuers that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded issuers that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of issuers with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.19 vs 2.39**	**2.15 vs 2.35**	**2.24 vs 2.33**
At least 50% of the Portfolio in strongly rated issuers[3]	**84.34%**	**83.97%**	**73.51%**
At least 20% of the Portfolio in sustainable investments	**57.18%**	**50.65%**	**43.24%**
The number of issuers determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of an issuer to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps issuers' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where an issuer's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that an issuer offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of an issuer's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within an issuer's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of issuers in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

– – – *How were the indicators for adverse impacts on sustainability factors taken into account?*

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. issuers which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or issuer engagement.

– – – *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

5

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considersed the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee issuers.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee issuers on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
KfW	Government Guarantee	5.91%	Germany
Vier Gas Transport GmbH	Natural Gas	2.42%	Luxembourg
Elia Transmission Belgium Naamloze vennootschap	Electric	2.17%	Belgium

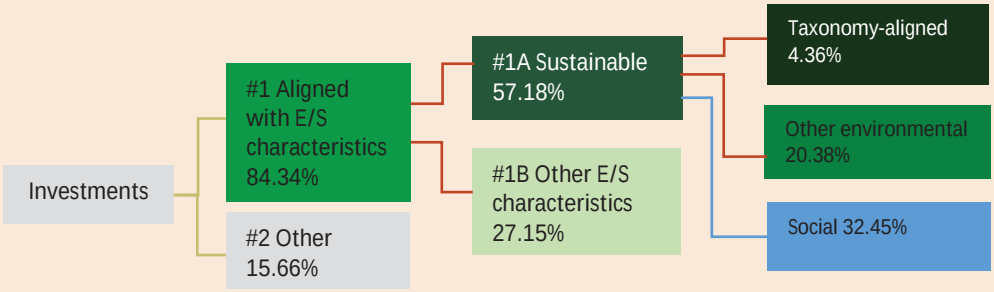
ING Groep N.V.	Banking	1.45%	Netherlands
OP Yrityspankki Oyj	Banking	1.42%	Finland

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

4.36% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by issuers on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

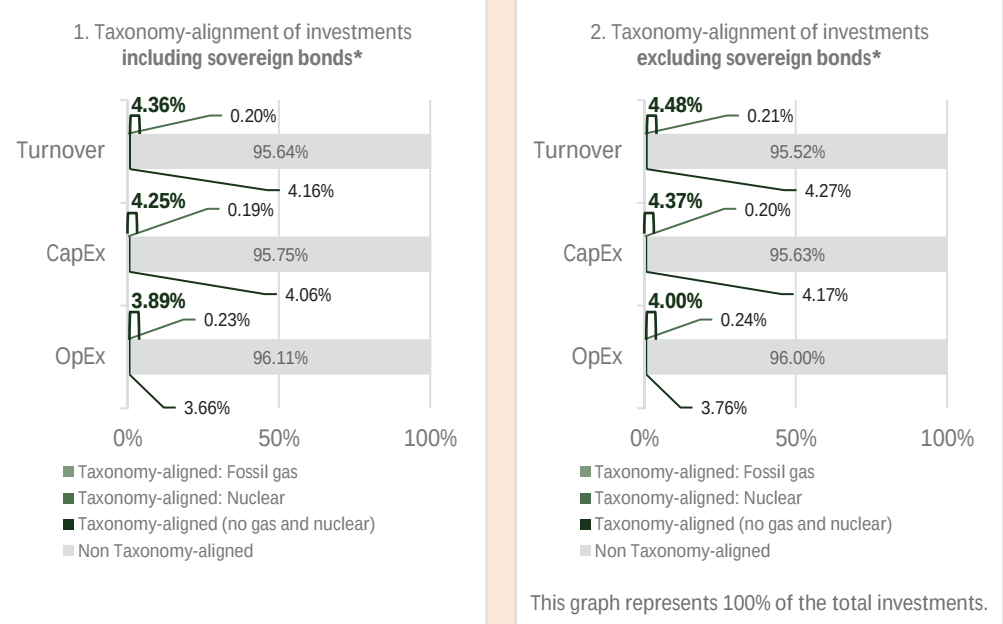
☒ Yes:

☐ In fossil gas ☒ In nuclear energy

☐ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.20% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

2.73% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2026	31/03/2025	31/03/2024
EU Taxonomy Alignment	**4.36%**	**3.85%**	**1.28%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

20.38% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

32.45% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for issuers that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **98** environmental and/or social specific engagement activities with issuers held in the Portfolio. These covered **47** issuers across **12** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**36.76%**
Environmental Stewardship	Biodiversity, Water and Waste	**19.12%**
Human Rights	Social and Employee Matters	**13.24%**
Labour Standards		**30.88%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) European High Yield Bond
Legal entity identifier: 54930067E3IWWEY1X181

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 24.40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of issuers with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in issuers that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that an issuer has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on an issuer's financial performance (profits, cash flow etc). Only investments in issuers that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; issuers that are making a positive contribution to society and/or the environment.

- Excluding issuers, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding issuers that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding issuers with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and issuers with direct involvement in nuclear weapons.

- Excluding companies/issuers involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

- *How did the sustainability indicators perform?*

  The Portfolio has the following sustainability indicators:

  - The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.19** and the benchmark rating was **2.30** (on a scale of 1-5, where lower is better).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

[1]The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

- The Portfolio maintained over **50%** of its holdings in strongly rated issuers over the reporting period when including the Investment Manager's qualitative ESG Materiality assessments based on its own research, outside of the ESGM Model. On 31 March 2026, the Portfolio held **74.81%** in strongly rated issuers[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **24.40%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded issuers that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded issuers that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of issuers with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024	2023
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.19 vs 2.30**	**2.30 vs 2.39**	**2.47 vs 2.55**	**2.54 vs 2.76**
At least 50% of the Portfolio in strongly rated issuers[3]	**74.81%**	**55.17%**	**59.01%**	**55.33%**
At least 20% of the Portfolio in sustainable investments	**24.40%**	**23.53%**	**27.61%**	**N/A**
The number of issuers determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches	No Breaches

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches	No Breaches

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of an issuer to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps issuers' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where an issuer's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that an issuer offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of an issuer's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within an issuer's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of issuers in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. issuers which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or issuer engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee issuers.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee issuers on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Electricite de France, Societe Anonyme	Utility	2.90%	France
EDP S.A.	Utility	2.10%	Portugal

Vodafone Group Public Limited Company	Telecommunications	2.07%	United Kingdom
Telefonica Europe BV	Telecommunications	1.97%	Spain
iliad SA	Telecommunications	1.84%	France
CPI Property Group S.A.	Real Estate	1.66%	Germany

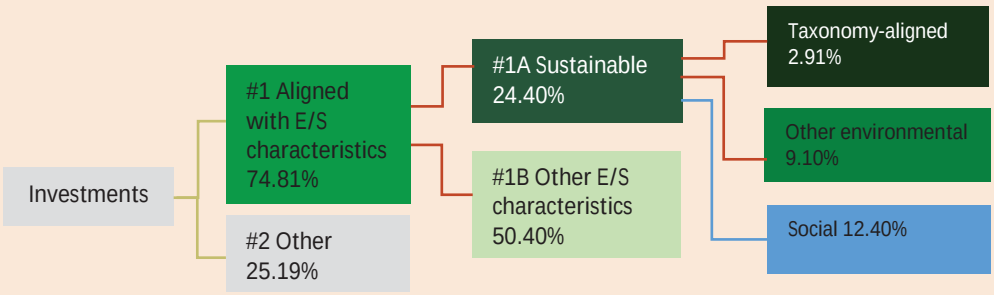
Atos SE	Technology & Electronics	1.24%	France
Lorca Telecom Bondco SA	Telecommunications	1.20%	United Kingdom
Cirsa Finance International SARL	Leisure	1.19%	Luxembourg

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

2.91% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by issuers on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves

Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☒ Yes:

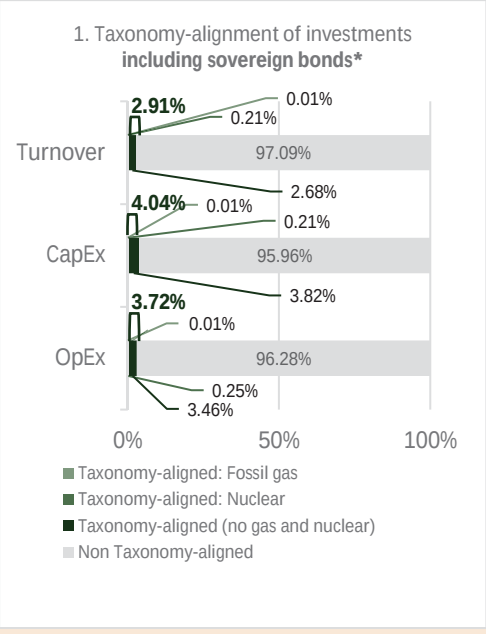
☒ In fossil gas ☒ In nuclear energy

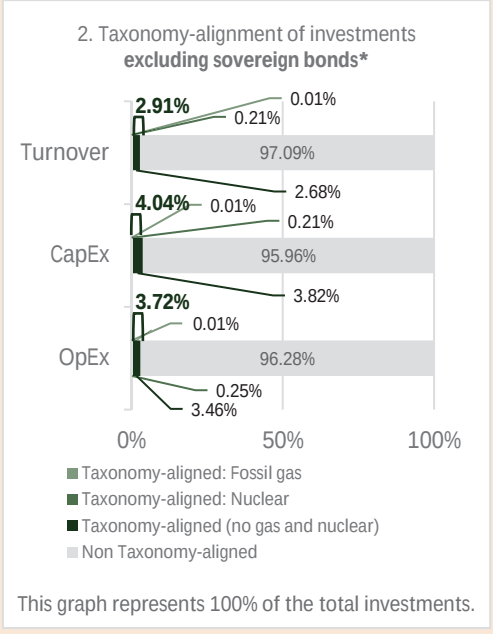
☐ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

10

- *What was the share of investments made in transitional and enabling activities?*

0.23% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

1.18% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**2.91%**	**2.80%**	**1.54%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.10% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

12.40% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for issuers that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model

and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **35** environmental and/or social specific engagement activities with issuers held in the Portfolio. These covered **19** issuers across **9** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**48.15%**
Environmental Stewardship	Biodiversity, Water and Waste	**33.33%**
Human Rights	Social and Employee Matters	**7.41%**
Labour Standards		**11.11%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) European Short-Term High Yield Bond
Legal entity identifier: 549300VSS6TC4ESQIL03

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 13.70% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 13th August 2025, the Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e.

holding a higher proportion of issuers with strong ESG Materiality Ratings (ratings of 1 to 3) than the Market index*, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in issuers that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that an issuer has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on an issuer's financial performance (profits, cash flow etc). Only investments in issuers that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **5%** of the Portfolio in sustainable investments; issuers that are making a positive contribution to society and/or the environment.

- Excluding issuers, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding issuers that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding issuers with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and issuers with direct involvement in nuclear weapons.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the market index, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio

*a market index (Q7AE, representative of the short-term European HY universe is used for reference for ESG Materiality comparisons.

[1]The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by its ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

rating was **2.21** and the market index rating was **2.48** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated issuers over the reporting period when including the Investment Manager's qualitative ESG Materiality assessments based on its own research, outside of the ESGM Model. On 31 March 2026, the Portfolio held **66.99%** in strongly rated issuers[2].

- The Portfolio held over **5%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **13.70%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded issuers that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded issuers that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of issuers with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

- ***...and compared to previous periods?***

Not applicable. This is the first reporting period for the Portfolio and a comparison of the sustainability indicators will be made in the next periodic report.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of an issuer to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps issuers' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where an issuer's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that an issuer offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of an issuer's revenues aligned to the SDGs will increase over the medium term.
• A qualitative assessment and documented evidence that sustainability is a material business driver within an issuer's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of issuers in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Issuers which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or issuer engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee issuers.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee issuers on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13/08/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Nissan Motor Co., Ltd.	Automotive	1.87%	Japan
Avantor Funding, Inc.	Healthcare	1.82%	United States
alstria S.a r.l.	Real Estate	1.82%	Luxembourg

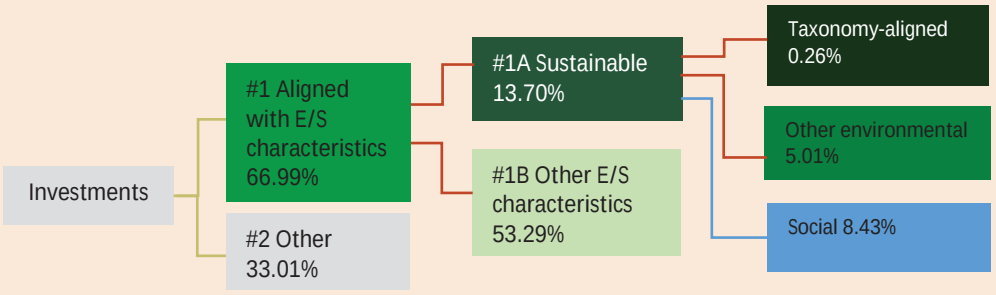
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.26% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by issuers on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

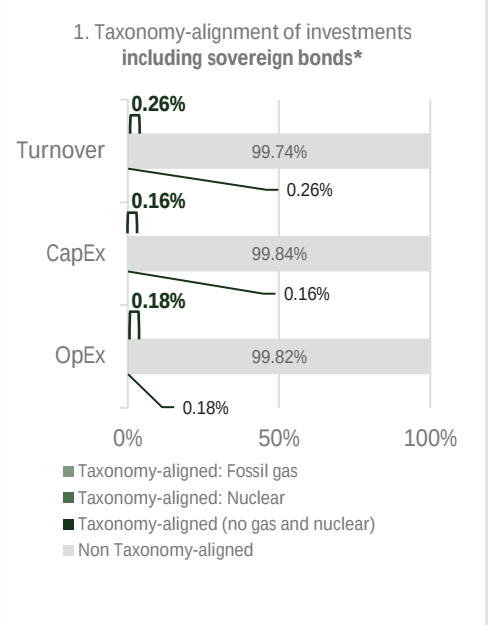
☐ In fossil gas ☐ In nuclear energy

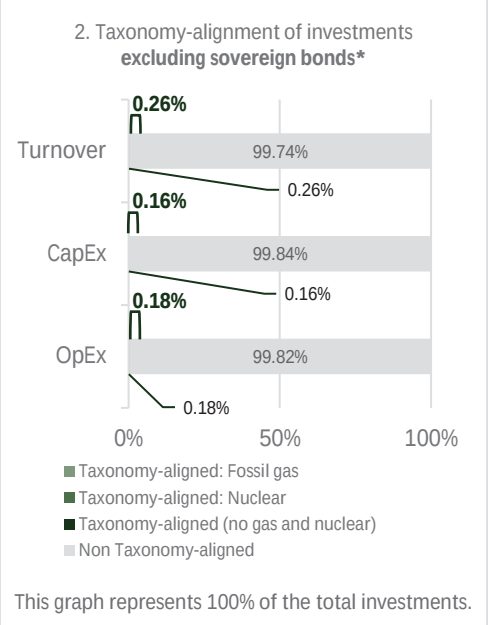
☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





This graph represents 100% of the total investments.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

  0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

  0.14% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

  Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

5.01% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

8.43% of the sustainable investments had a social objective.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for issuers that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **7** environmental and/or social specific engagement activities with issuers held in the Portfolio. These covered **5** issuers across **3** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**66.67%**
Environmental Stewardship	Biodiversity, Water and Waste	**22.22%**
Human Rights	Social and Employee Matters	**11.11%**
Labour Standards		**0.00%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

'ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) European Social Bond
Legal entity identifier: 549300071NVI9LFDKW96

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ **Yes**	☐ **No**
☐ It made **sustainable investments with an environmental objective:** ___	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___ of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective:** 97.88%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Portfolio to provide positive social outcomes by investing in bonds that supported or funded socially beneficial activities and development was met, as assessed by the Investment Manager's Social Rating Methodology.

It achieved the social objective by:

(i) Investing in bonds that positively contributed to one or more areas of social outcome (outlined below). These are based on the social hierarchy of needs, whereby "primary" social needs are foundational and supersede more general social needs. The social outcomes are also aligned to the UN Sustainable Development Goals ("SDGs"), as the core global set of priorities for social and sustainable development.

The Investment Manager used a proprietary categorisation and rating model (the "Social Rating Methodology") to carry out a detailed assessment of each bond's contribution to the social objective pursued by the Portfolio. The Investment Manager only selected bonds that are rated as social investments for inclusion in the Portfolio.

Social Outcome Category	**Primary SDG**	**Areas of Social Outcome**
Primary Social Needs	Sustainable Cities and Communities	Affordable Housing e.g. Social bonds (housing focus)
Basic Social Needs	Good Health and Well Being	Health and Welfare e.g. Health services
Social Enabling	Quality Education	Education and Training e.g. Printing and publishing
Social Empowerment	Decent Work and Economic Growth	Employment e.g. Retail
Social Enhancement	Sustainable Cities and Communities	Community e.g. Social bonds (community focus)
Social Facilitation	Reduced Inequalities	Access to Services e.g. Financial services (socially focused)
Societal Developments	Industry, Innovation and Infrastructure	Economic Regeneration and Development e.g. Green bonds

The Investment Manager identifies the social intentionality and purpose of the use of a bond's proceeds and the bond is categorised as A, B or C (A being the highest) according to its level of impact as:

- an impact investment where a bond's use of proceeds has a clear social objective.

- an investment with impact, where a bond's use of proceeds does not have a clear social objective, but where positive social benefit is nonetheless identifiable; or.
- development finance where a bond's use of proceeds supports investments in infrastructure and economic development for positive social contribution.

The Investment Manager also assesses the intensity of a bond's social focus by scoring each bond against 9 indicators (such as the bond's ability to tackle deprivation by assessing the target population and region) to produce an overall rating of minor, moderate, good or strong. Any bond rated as, or whose rating falls below, minor is subject to review and may be re-categorised as a fallen angel and is therefore no longer eligible to be held by the Portfolio.

The results of the social assessments are combined to produce an overall social rating which is used by the Investment Manager to construct the portfolio.

(ii) Excluding bonds from issuers that:

- Derived revenue above specific thresholds from industries or activities that the Investment Manager deemed to offer minimal social benefits or to have a high risk of negative outcomes on society and/or the environment;
- Breached accepted international standards and principles of governance as determined by the Investment Manager such as, but not limited to, the United Nations Global Compact, the International Labour Organization Labour Standards, and the United Nations Guiding Principles on Business and Human Rights.

(iii) Engaging with issuers to enhance the Portfolio's social focus and standards. As a bondholder, the Investment Manager actively pursued opportunities to engage with issuers to better understand and positively influence their social value and/or to minimise the negative social impacts of the net zero transition.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used the following sustainability indicators to measure the attainment of the social objective of the Portfolio:

(i) The number of bonds that are categorised and rated as social investments (sustainable investments) under the Social Rating Methodology. During the reporting period, the Portfolio had the following allocation to bonds rated as social investments (sustainable investments) under the Social Rating Methodology:

Social Rating	% of Portfolio
Impact Investments (A)	**44.20% (101 bonds)**
Investment with Impact (B)	**36.90% (102 bonds)**
Development Finance (C)	**16.80% (45 bonds)**

Cash holdings are not shown as a % of net assets in the table above.

(ii) The number of bonds from issuers determined to be in breach of the Portfolio's exclusion criteria. During the reporting period, there were no bonds that breached the Portfolio's exclusion criteria.

The number of bonds that are categorised and rated as social investments have been subject to an assurance review by a third party.

...and compared to previous periods?

The table below shows a like for like breakdown for the Social Ratings over time.

Social Rating	31/03/2026	31/03/2025	31/03/2024	31/03/2023
Impact Investments (A)	**44.20%**	**44.34%**	**42.64%**	**38.86%**
Investment with Impact (B)	**36.90%**	**34.66%**	**36.38%**	**38.38%**
Development Finance (C)	**16.80%**	**19.02%**	**17.32%**	**21.60%**

Cash holdings are not shown as a % of net assets in the table above.

In addition, the Portfolio did not breach any of the exclusion criteria during this or previous reporting periods.

The sustainability indicators have been subject to an assurance review by a third party auditor.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

To ensure the sustainable investments do not significantly harm the sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards; (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in potentially harmful activities.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitored all mandatory PAIs and certain voluntary PAIs, as described below.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm sustainability objectives using an in-house data driven model and investment due diligence.

The Investment Manager identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Issuers which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine whether significant harm is being caused by the issuer. Where quantitative data is not available, the Investment Manager endeavours to satisfy that no significant harm has taken place through qualitative research.

Depending on the type and materiality of the PAI indicator, the Investment Manager will either engage with the issuer to address the harmful practices by taking appropriate action, or limit exposure to such issuers in the Portfolio.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organization on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded bonds from issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the do no significant harm (DNSH) checks also assessed issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the PAIs of its investment decisions for the Portfolio that may negatively harm sustainability factors through a combination of exclusions, monitoring and engaging with investee companies, and investment research.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators. These exclusions relate to fossil fuel exposure, non-renewable energy production, global norms, and controversial weapons for corporate issuers and, freedom of expression and corruption for sovereign and supranational issuers. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Portfolio considered PAIs as part of its stewardship activities. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026

Largest investments	Sector	% Assets	Country
Council of Europe Development Bank	Supranational	2.26%	Supranational

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of securities as part of delivering its investment objective.

0.00% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

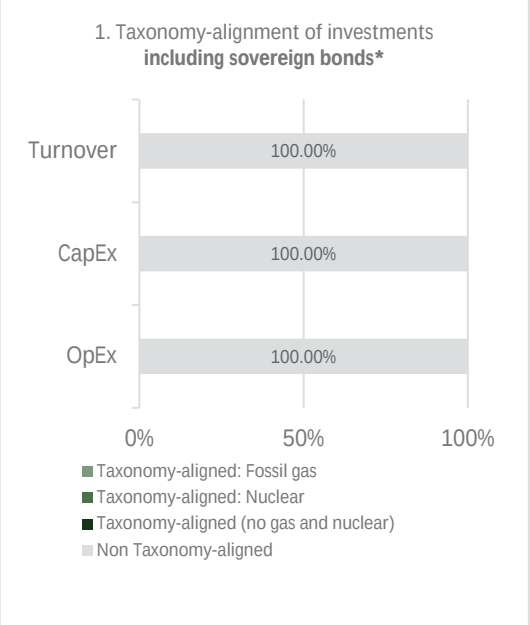
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

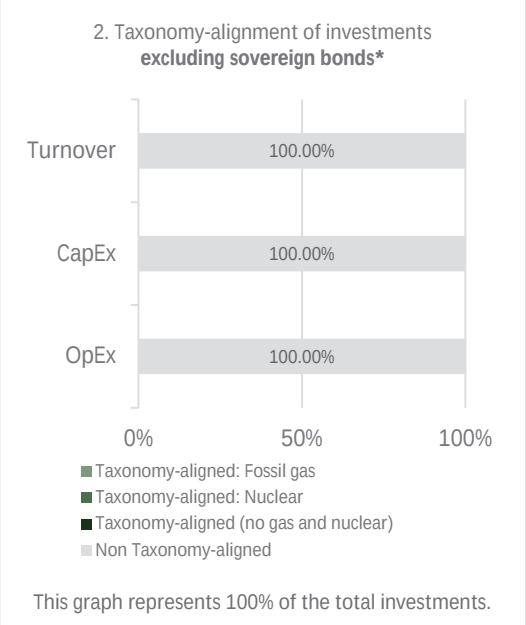
☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.00%**	**0.00%**	**0.00%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

0.00% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

97.88% of the sustainable investments had a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "non sustainable" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; and (iii) derivatives held for hedging purposes.

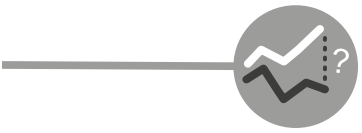
These instruments were not used to meet the sustainable investment objective of the Portfolio. However, minimum environmental or social safeguards are applied to ensure that such instruments do not affect the delivery of the Portfolio's sustainable investment objective. For cash positions and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period there were **40** sustainability related engagement activities with issuers held in the Portfolio. These covered **26** issuers across **11** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change & Energy Transition	GHG Emissions and Energy Performance	**30.00%**
Nature Capital	Biodiversity, Water and Waste	**10.00%**
Human Capital	Social and Employee Matters	**16.00%**
Labour Standards		**44.00%**



How did this financial product perform compared to the reference sustainable benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains its sustainable objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How did the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Emerging Market Corporate Bonds
Legal entity identifier: 54930077CKAC4O141D13

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 11.76% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 13 August 2025, the Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of issuers with strong ESG Materiality Ratings (ratings of 1 to 3)

than the benchmark, over rolling 12-month periods.
- Maintaining at least **50%** of the Portfolio holdings in issuers that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that an issuer has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on an issuer's financial performance (profits, cash flow etc). Only investments in issuers that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **5%** of the Portfolio in sustainable investments; issuers that are making a positive contribution to society and/or the environment.

- Excluding issuers, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding issuers that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding issuers with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and issuers with direct involvement in nuclear weapons.

- Engaging with issuers that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

- *How did the sustainability indicators perform?*

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.54** and the benchmark rating was **2.75** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated issuers over the reporting period. On 31 March 2026, the Portfolio held **62.52%** in strongly

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by its ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

rated issuers[2].
- The Portfolio held over **5%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **11.76%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded issuers that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded issuers that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of issuers with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

Not applicable. This is the first reporting period for the Portfolio, and a comparison of the sustainability indictors will be made in the next periodic report.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of an issuer to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps issuers' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where an issuer's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that an issuer offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of an issuer's revenues aligned to the SDGs will increase over the medium term.

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

• A qualitative assessment and documented evidence that sustainability is a material business driver within an issuer's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of issuers in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. issuers which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or issuer engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the

eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed issuers for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee issuers.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee issuers on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13/08/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
SK hynix Inc.	Technology & Electronics	2.52%	South Korea

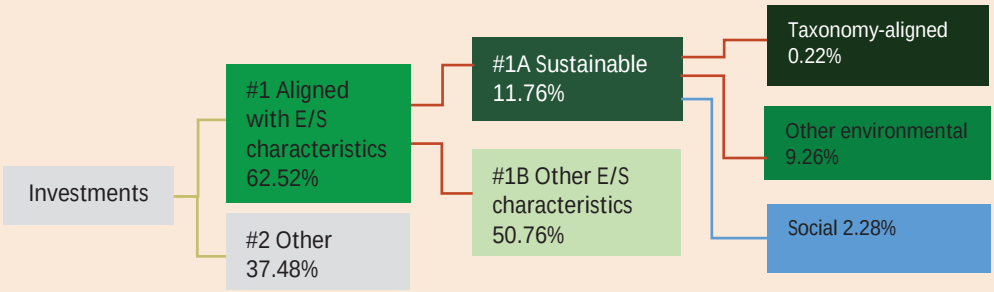
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

Transportation Services	4.42%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.22% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by issuers on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

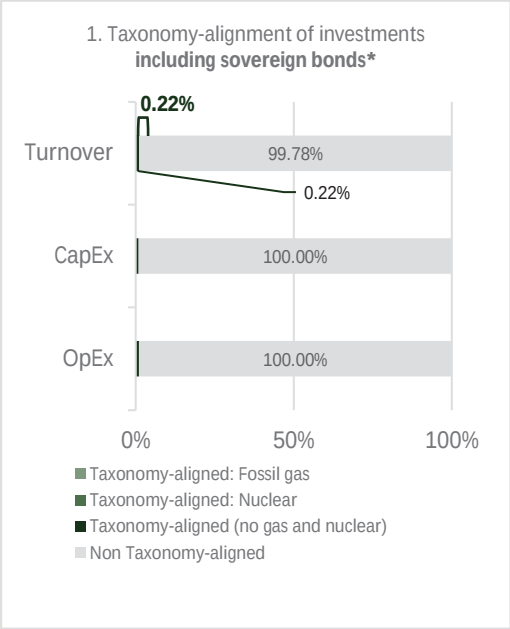
☐ Yes:

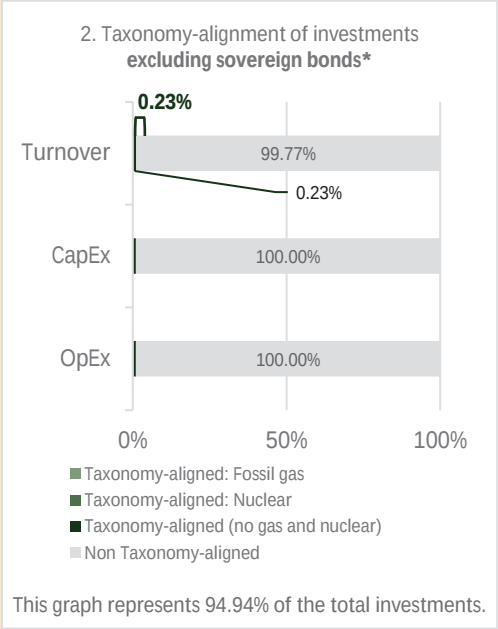
☐ In fossil gas ☐ In nuclear energy

☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

  0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

  0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

  Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.26% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

2.28% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for issuers that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **5** environmental and/or social specific engagement activities with issuers held in the Portfolio. These covered **3** issuers across **3** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**50.00%**
Environmental Stewardship	Biodiversity, Water and Waste	**50.00%**
Human Rights	Social and Employee Matters	**0.00%**
Labour Standards		**0.00%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Focus
Legal entity identifier: 549300N6B2IZVI8Z4Q40

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 66.02% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.34** and the benchmark rating was **2.56** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **96.83%** in

[1]The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **66.02%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024	2023

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
NVIDIA Corporation	Information Technology	7.80%	United States
Microsoft Corporation	Information Technology	6.78%	United States
Mastercard Incorporated	Financials	4.52%	United States

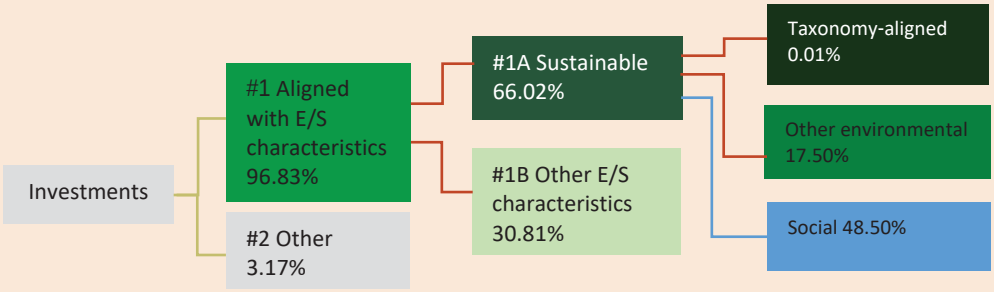
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.01% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or

estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

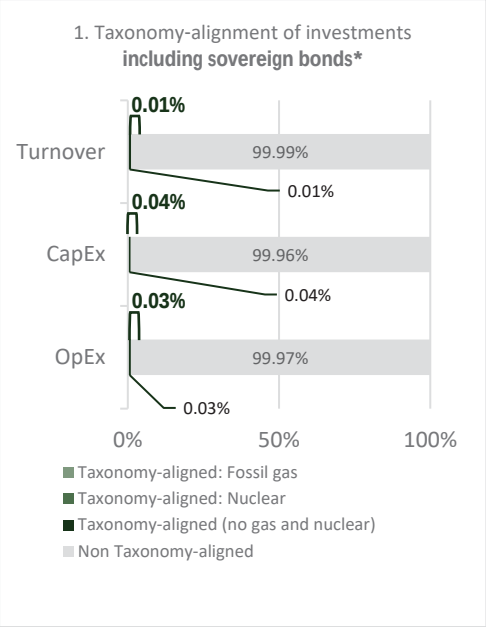
☒ No

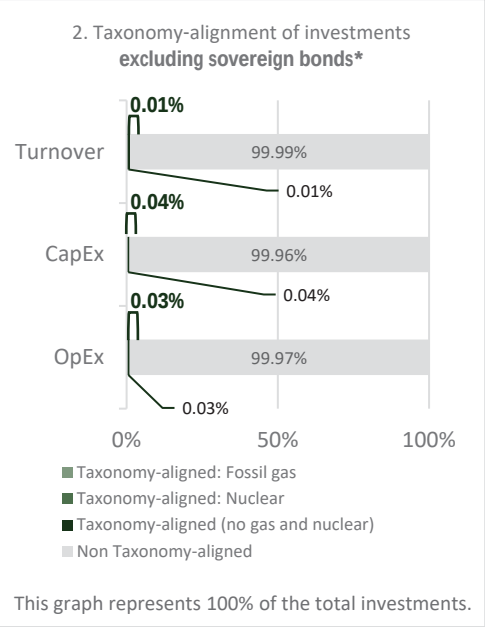
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.01%**	**0.59%**	**0.35%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

17.50% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

48.50% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **58** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **30** companies across **10** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**38.55%**
Environmental Stewardship	Biodiversity, Water and Waste	**18.07%**

Human Rights	Social and Employee Matters	**22.89%**
Labour Standards		**20.48%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Emerging Market Equities
Legal entity identifier: 5493000595IG2G7M5Y50

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 52.42% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **5%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

- *How did the sustainability indicators perform?*

  The Portfolio has the following sustainability indicators:

  - The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.35** and the benchmark rating was **2.47** (on a scale of 1-5, where lower is better).

  - The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **86.76%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **5%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **52.42%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.35 vs 2.47**	**2.52 vs 2.61**	**2.67 vs 2.68**
At least 50% of the Portfolio in strongly rated companies[3]	**86.76%**	**71.94%**	**72.71%**
At least 5% of the Portfolio in sustainable investments	**52.42%**	**36.82%**	**37.31%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Taiwan Semiconductor Manufacturing Company Limited	Information Technology	9.63%	Taiwan
Tencent Holdings Limited	Communication Services	6.45%	China
SK hynix Inc.	Information Technology	3.76%	Korea
Alibaba Group Holding Limited	Consumer Discretionary	3.69%	China

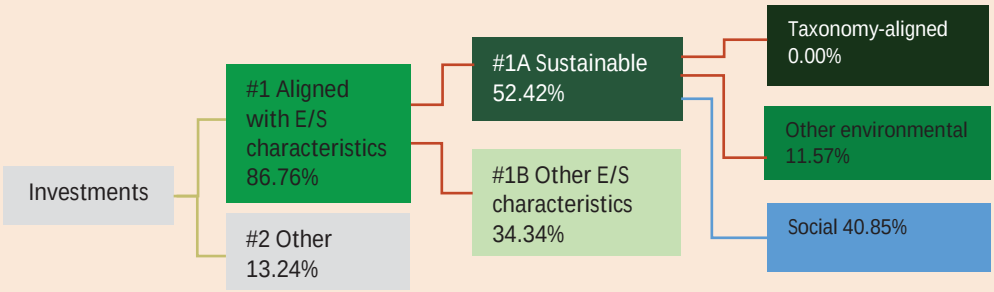
Xiaomi Corporation	Information Technology	1.62%	China

What was the proportion of sustainability-related investments?

What was the asset allocation?



Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.00% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves

Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

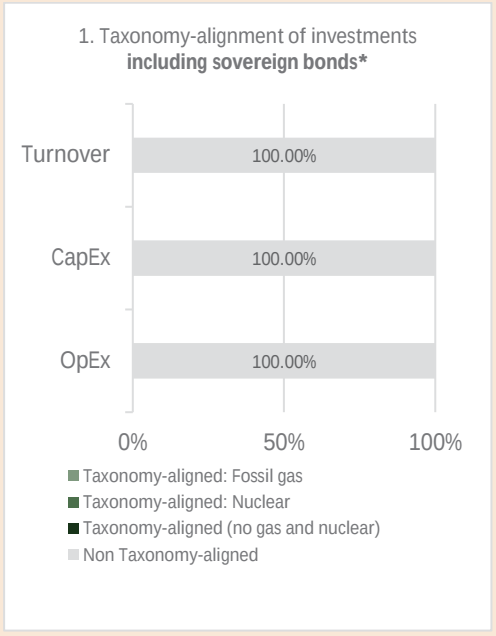
☐ In fossil gas ☐ In nuclear energy

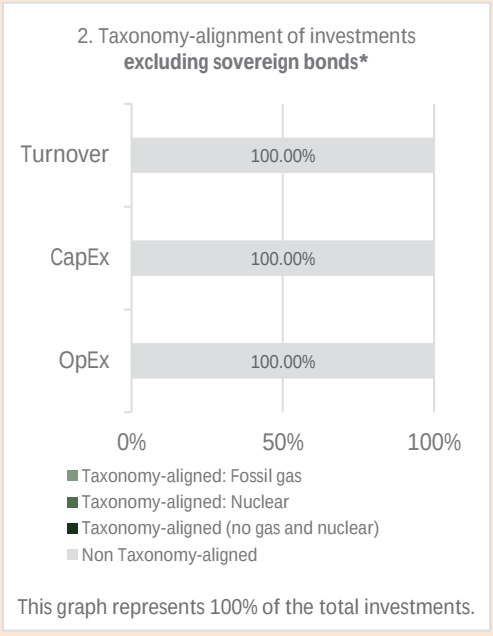
☒ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

  0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

  0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

EU Taxonomy Alignment	**0.00%**	**0.00%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

11.57% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

40.85% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

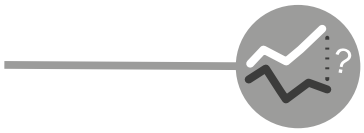
a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **31** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **23** companies across **9** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**32.18%**
Environmental Stewardship	Biodiversity, Water and Waste	**29.89%**
Human Rights	Social and Employee Matters	**17.24%**
Labour Standards		**20.69%**



How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Equity Income
Legal entity identifier: 549300WX6ZDL2WOHJS77

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 82.67% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 1 April 2025 to 12 August 2025, the Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e.

holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- *How did the sustainability indicators perform?*

  The Portfolio has the following sustainability indicators:

  - The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 July 2025, the Portfolio rating was

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

2.40 and the benchmark rating was **2.52** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 12 August 2025, the Portfolio held **96.19%** in strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 12 August 2025, **82.67%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

- ***...and compared to previous periods?***

	2025	2024	2023
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.41 vs 2.47**	**2.32 vs 2.45**	**2.19 vs 2.73**
At least 50% of the Portfolio in strongly rated companies[3]	**95.91%**	**97.07%**	**78.76%**
At least 20% of the Portfolio in sustainable investments	**72.23%**	**61.25%**	**N/A**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 12/08/2025.

Issuer name	Sector	Average weight	Country
Microsoft Corporation	Information Technology	5.48%	United States
Broadcom Inc.	Information Technology	3.43%	United States
Deutsche Telekom AG	Communication Services	2.56%	Germany
Taiwan Semiconductor Manufacturing Company Limited	Information Technology	2.51%	Taiwan
Intercontinental Exchange, Inc.	Financials	2.44%	United States
Medtronic Public Limited Company	Health Care	2.43%	United States

BT Group plc	Communication Services	2.22%	United Kingdom
Siemens Aktiengesellschaft	Industrials	2.13%	Germany
Hewlett Packard Enterprise Company	Information Technology	2.03%	United States
Coca-Cola Company	Consumer Staples	1.99%	United States

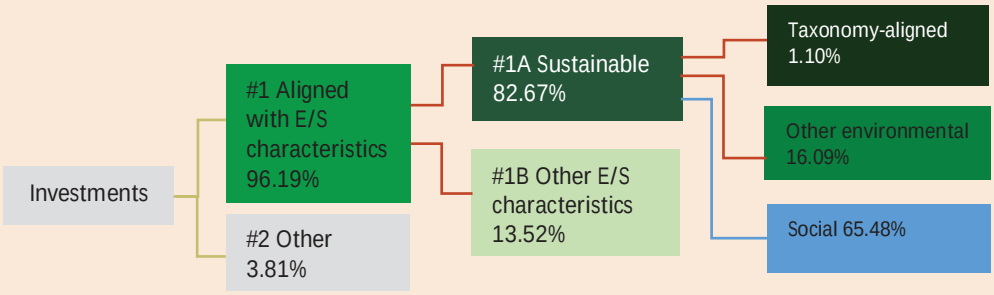
TE Connectivity Plc	Information Technology	1.89%	United States
TotalEnergies SE	Energy	1.89%	France
SAP SE	Information Technology	1.85%	Germany
Procter & Gamble Company	Consumer Staples	1.81%	United States

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*
Communication Services	4.85%
Diversified Telecommunication Services	4.85%
Consumer Discretionary	5.47%
Automobiles	0.95%
Broadline Retail	1.48%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

1.10% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

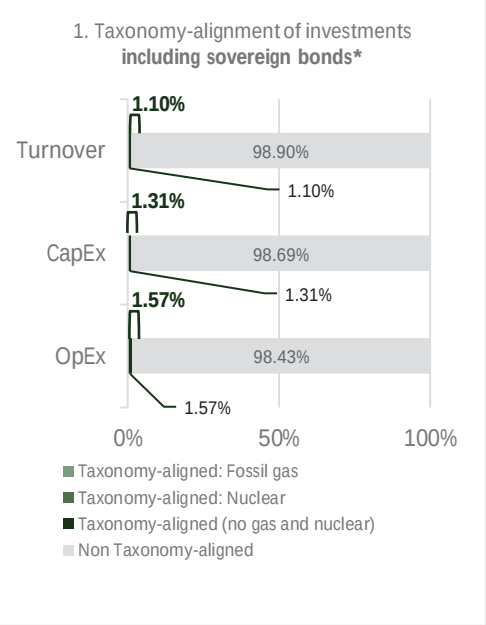
☒ No

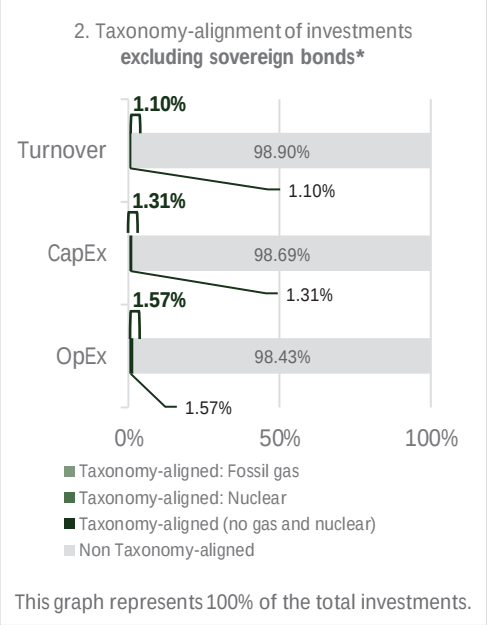
Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





This graph represents 100% of the total investments.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

1.08% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.69%**	**0.19%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

16.09% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

65.48% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

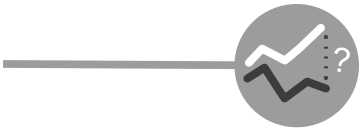
All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **35** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **22** companies across **8** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**52.73%**
Environmental Stewardship	Biodiversity, Water and Waste	**16.36%**
Human Rights	Social and Employee Matters	**16.36%**
Labour Standards		**14.55%**



How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

'ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Sustainable Global Equity Income
Legal entity identifier: 549300WX6ZDL2WOHJS77

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ **Yes**	☐
☒ It made **sustainable investments with an environmental objective:** 33.95%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments
☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy 4.06%	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 29.89%	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective:** 65.42%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The Portfolio seeks to address sustainability challenges facing people and the environment by investing in global companies that provide solutions aligned with the Portfolio's Sustainability Themes: Energy Transition, Resource Efficiency, Sustainable Infrastructure, Sustainable Finance, Societal Development, Health and Wellbeing and Technological Innovation & Inclusion.

The Portfolio launched on 13 August 2025, and from this date, the CT (Lux) Sustainable Global Equity Income Portfolio invested in companies across its Sustainability Themes which in turn link to the United Nations' Sustainable Development Goals ("SDGs")**.**

The overarching philosophy of the Portfolio is to:

• Avoid companies with environmentally or socially damaging products, or unsustainable business or governance practices.

• Invest in companies that make a positive contribution to society and/or the environment, in line with the Portfolio's key sustainability themes. The Investment Manager assesses the Portfolio's overall alignment with each theme. In addition, the Investment Manager analyses how individual companies' key sources of revenue map to the targets which underpin the Sustainable Development Goals (SDGs), which the Investment Manager can link to environmental and social outcomes.

• Improve management of ESG issues, using the Investment Manager's influence as an investor to encourage best practice through engagement and voting.

The Portfolio aims for a minimum of **80%** of its investments to be classified as sustainable investments. As at 31/03/2026, it held **99.37%** in sustainable investments.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

How did the sustainability indicators perform?

The Investment Manager used the following sustainability indicators to measure the attainment of the sustainable objective of the Portfolio:

1) The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms.

The Portfolio did not invest in companies that breached its exclusion criteria and/or global norms.

2) The percentage of the Portfolio which aligns to its key sustainability themes.

Sustainability theme	**% of Portfolio (as at 31/03/2026)**
Energy Transition	**9.16%**
Resource Efficiency	**9.78%**
Sustainable Infrastructure	**16.59%**
Sustainable Finance	**13.12%**
Societal Development	**1.16%**
Health & Wellbeing	**22.87%**

Technological Inclusion and Innovation	**26.69%**

Cash holdings are not shown as a % of net assets in the table above.

3) Held companies' revenue alignment with targets that underpin the SDGs.

As at 31/03/2026, **99.37%** of the Portfolio was invested in companies with greater than **50%** of net revenues positively aligned with the SDGs.

...and compared to previous periods?

Not applicable. This is the first reporting period for the Portfolio and a comparison of the sustainability indicators will be made in the next periodic report.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Portfolio's investment approach assessed that the sustainable investments made by the Portfolio do not significantly harm other sustainable investment objectives in the following ways:

The Portfolio excluded investments that were contrary to the goals of making positive contributions to the environment and/or society. The criteria are product- and conduct-based, covering topics such as fossil fuels, weapons, and global norms breaches.

Companies were also identified which the Investment Manager thinks could benefit from engagement to address material ESG issues, before they are considered to be significantly harmful.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Investments which were reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment due diligence.

The Investment Manager identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of principal adverse impact indicators, including mandatory indicators from Table 1 and certain indicators from Tables 2 and 3 of Annex I of the Regulatory Technical Standards. Companies which fall below these thresholds are flagged as potentially harmful and a review is then undertaken to determine whether significant harm is being caused by the company. Where quantitative data is not available, the Investment Manager endeavours to satisfy that no significant harm has taken place through desk-based qualitative research.

Depending on the type and materiality of the harm, the Investment Manager will either engage with the company to address the harmful practices by taking appropriate action, or limit exposure to such companies in the portfolio.

During the review period, the Investment Manager reviewed all portfolio holdings and concluded that there were no significant adverse impacts on sustainability factors relating to them.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details.:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies that breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered principal adverse impacts (PAIs) on sustainability factors through a combination of exclusions and engaging with investee companies. As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to sustainability indicators. The exclusions applied by the Portfolio relate to fossil fuel exposure, non-renewable energy production, global norms, and controversial weapons. During the period under review, the Portfolio adhered to the exclusion criteria.

In addition, the Investment Manager considered PAIs as part of engagement with investee companies on environmental sustainability factors relating to decarbonisation and biodiversity, and social sustainability factors such as discrimination. Further details of engagement activities that align to the PAIs is detailed later in the report.

What were the top investments of this financial product?

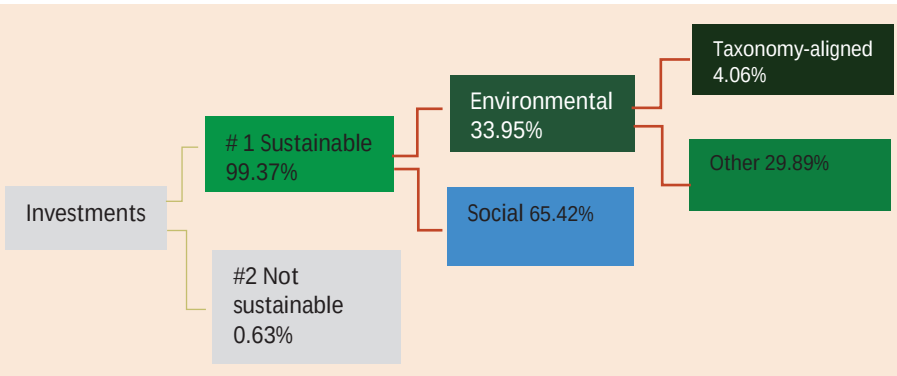
The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13/08/2025 to 31/03/2026

Largest investments	Sector	% Assets	Country
Microsoft Corporation	Information Technology	7.07%	United States
Broadcom Inc.	Information Technology	3.91%	United States
Taiwan Semiconductor Manufacturing Company Limited	Information Technology	3.56%	Taiwan
Hubbell Incorporated	Industrials	2.93%	United States
Waste Management, Inc.	Industrials	2.87%	United States
Linde Plc	Materials	2.82%	United States
Eli Lilly and Company	Health Care	2.78%	United States
Pfizer Inc.	Health Care	2.47%	United States
SSE plc	Utilities	2.44%	United Kingdom
AIA Group Limited	Financials	2.34%	Hong Kong
Medtronic Public Limited Company	Health Care	2.27%	United States
Schneider Electric SE	Industrials	2.23%	France
Pearson plc	Consumer Discretionary	2.22%	United Kingdom
GSK plc	Health Care	2.22%	United Kingdom
Colgate-Palmolive Company	Consumer Staples	2.21%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

Note: an investment may contribute to one or more environmental or social objectives. Investments have been split based on a quantitative review of revenue exposure. Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have a discretion to invest in these type of securities as part of delivering its investment objective.

4.06% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data that has been made available by third-party data providers and is measured by the proportion of turnover associated with economic activities that qualify as environmentally sustainable. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment and may be subject to limitations in respect of its accuracy and/or completeness. The methodology upon which any estimates are based are proprietary to the third-party data provider. An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

Climate change mitigation	This figure will be presented when data quality improves.
Climate change adaptation	This figure will be presented when data quality improves.
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves.
Transition to a circular economy	This figure will be presented when data quality improves.
Pollution prevention and control	This figure will be presented when data quality improves.
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

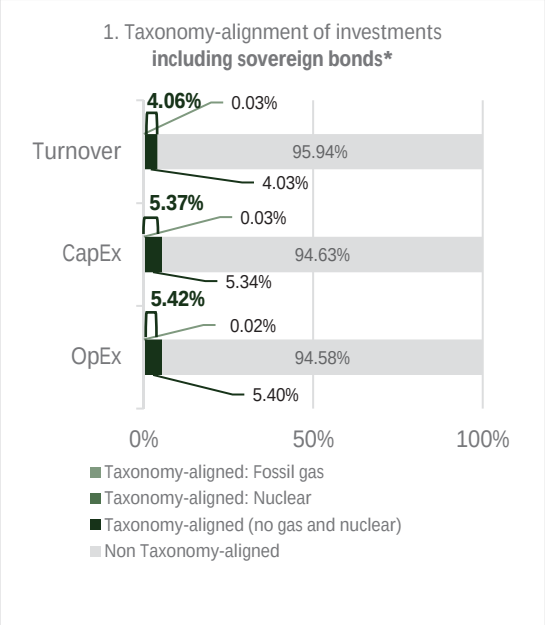
☒ Yes:

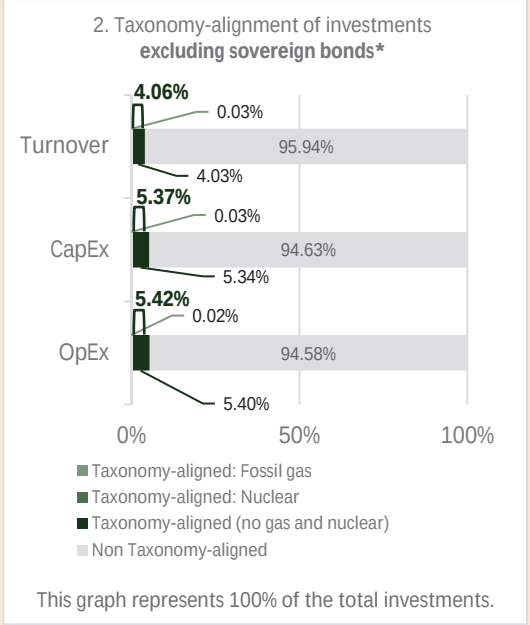
☒ In fossil gas ☐ In nuclear energy

☐ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

- *What was the share of investments made in transitional and enabling activities?*

  0.03% of the investments made by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

  1.59% of the investments made by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?*

  Not applicable. This is the first reporting period for the Portfolio and a comparison against previous reference periods will be made in the next periodic report.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

29.89% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

65.42% of the sustainable investments had a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards.?

Holdings classified as "non sustainable" include: (i) ancillary liquid assets (i.e. bank deposit at sight) which were held for liquidity management purposes; (ii) bank deposits for treasury purposes.

These instruments were not used to meet the sustainable investment objective of the Portfolio. However, minimum environmental or social safeguards are applied to ensure that such instruments do not affect the delivery of the Portfolio's sustainable investment objective, via the integration of ESG considerations into the counterparty risk assessment process.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reporting period there were **36** specific engagements with companies held in the portfolio on sustainability-related topics. These covered **21** companies across **5** countries across a range of themes.

Engagements are structured in line with the firm's engagement themes, which align with the PAIs. Below is provided a breakdown of the engagements undertaken:

Engagements theme	Alignment with PAIs	Proportion of engagements
Climate Change	GHG Emissions and Energy Performance	**18.87%**
Environmental Stewardship	Biodiversity, Water, Waste	**16.98%**
Human Rights	Social and Employee Matters	**33.96%**
Labour Standards		**30.19%**

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How did the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Select
Legal entity identifier: 5493004VNS7Y85HXLI13

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 77.00% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to their industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.25** and the benchmark rating was **2.56** (on a scale of 1-5, where lower is better).

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **96.12%** in strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **77.00%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024	2023
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.25 vs 2.56**	**2.14 vs 2.47**	**2.18 vs 2.45**	**2.45 vs 2.73**
At least 50% of the Portfolio in strongly rated companies[3]	**96.12%**	**91.80%**	**94.82%**	**71.21%**
At least 20% of the Portfolio in sustainable investments	**77.00%**	**74.87%**	**70.58%**	**N/A**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches	No Breaches

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that

are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
NVIDIA Corporation	Information Technology	7.19%	United States
Microsoft Corporation	Information Technology	6.33%	United States
Amazon.com, Inc.	Consumer Discretionary	3.86%	United States

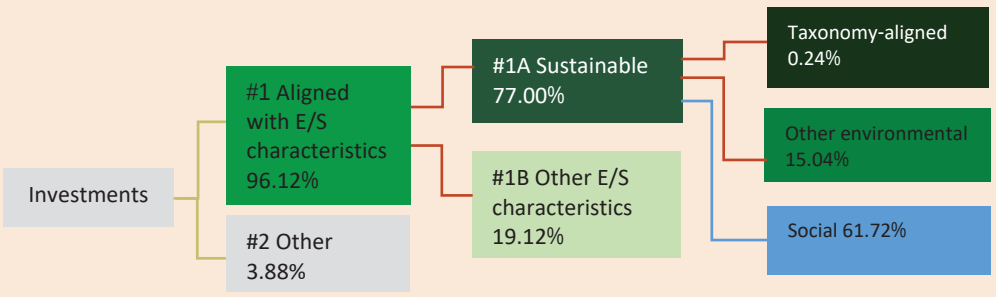
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Utilities	1.80%
Electric Utilities	1.80%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.24% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

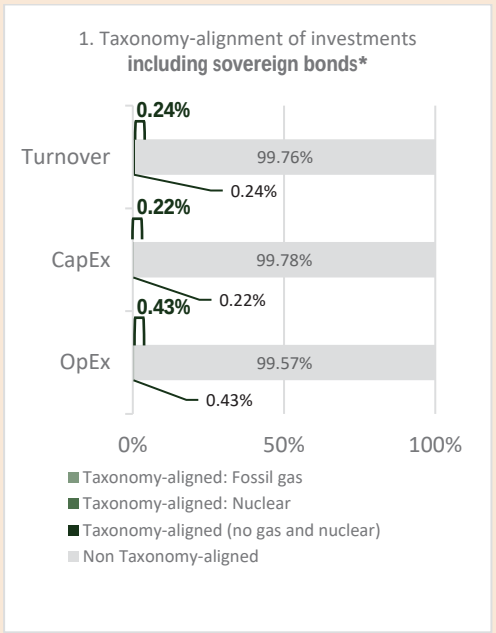
☐ In fossil gas ☐ In nuclear energy

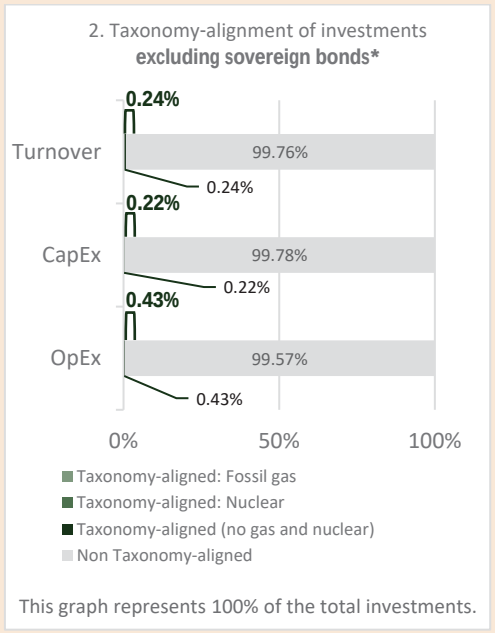
☒ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.23% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.24%**	**0.78%**	**0.31%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

15.04% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

61.72% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **85** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **41** companies across **13** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**35.71%**
Environmental Stewardship	Biodiversity, Water and Waste	**11.90%**
Human Rights	Social and Employee Matters	**21.43%**
Labour Standards		**30.95%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Smaller Companies
Legal entity identifier: 549300U3LV1YG52NP397

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 32.48% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.51** and the benchmark rating was **2.63** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **80.98%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **32.48%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded issuers which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
VSE Corporation	Industrials	1.79%	United States
Gaztransport & Technigaz SA	Energy	1.66%	France

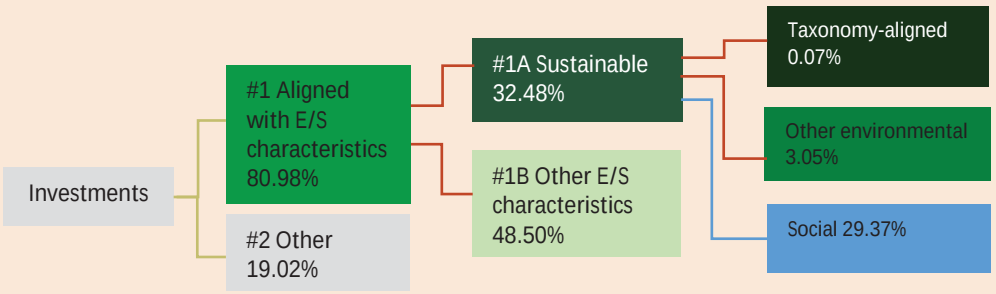
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%

In which economic sectors were the investments made?

Sector	% of Net Assets*
Consumer Discretionary	8.15%
Automobile Components	0.77%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.07% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

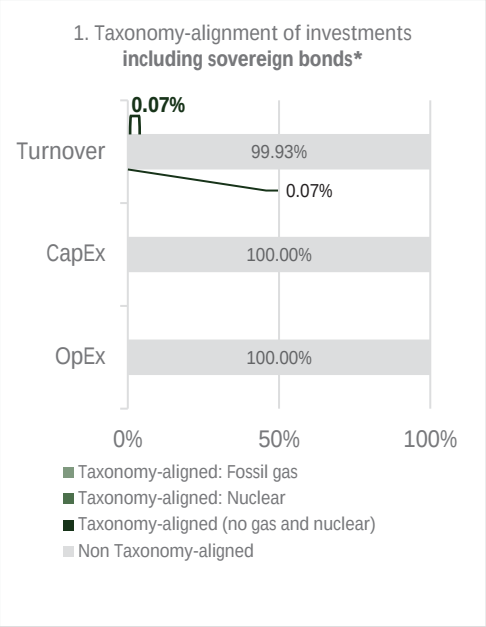
☐ Yes:

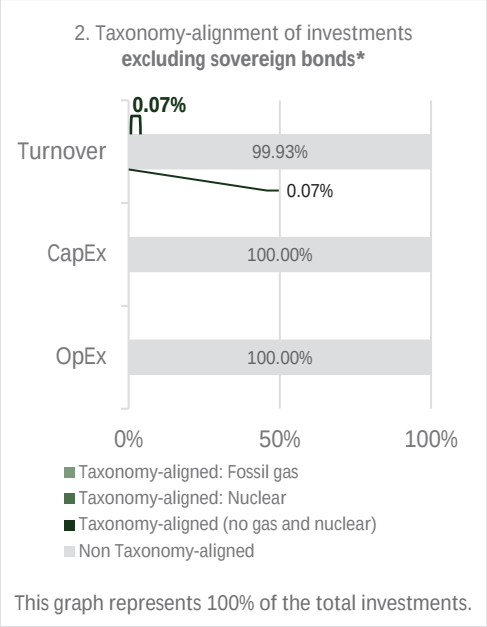
☐ In fossil gas ☐ In nuclear energy

☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.07%**	**0.22%**	**0.00%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

3.05% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

29.37% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **8** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **5** companies across **3** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**33.33%**
Environmental Stewardship	Biodiversity, Water and Waste	**22.22%**

Human Rights	Social and Employee Matters	**0.00%**
Labour Standards		**44.44%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) American
Legal entity identifier: 549300DPU5Y0HRX49161

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.44% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.59** and the benchmark rating was **2.68** (on a scale of 1-5, where lower is better).

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **88.21%** in strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **57.44%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.59 vs 2.68**	**2.43 vs 2.54**	**2.19 vs 2.50**
At least 50% of the Portfolio in strongly rated companies[3]	**88.21%**	**90.12%**	**89.51%**
At least 20% of the Portfolio in sustainable investments	**57.44%**	**53.40%**	**45.64%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
NVIDIA Corporation	Information Technology	8.70%	United States
Microsoft Corporation	Information Technology	7.39%	United States
Alphabet Inc.	Communication Services	5.37%	United States
Amazon.com, Inc.	Consumer Discretionary	4.72%	United States
Meta Platforms, Inc.	Communication Services	3.31%	United States

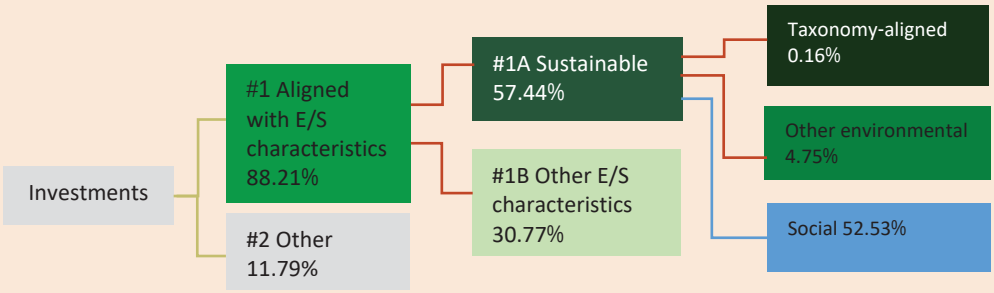
Procter & Gamble Company	Consumer Staples	1.60%	United States
Coca-Cola Company	Consumer Staples	1.57%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.16% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

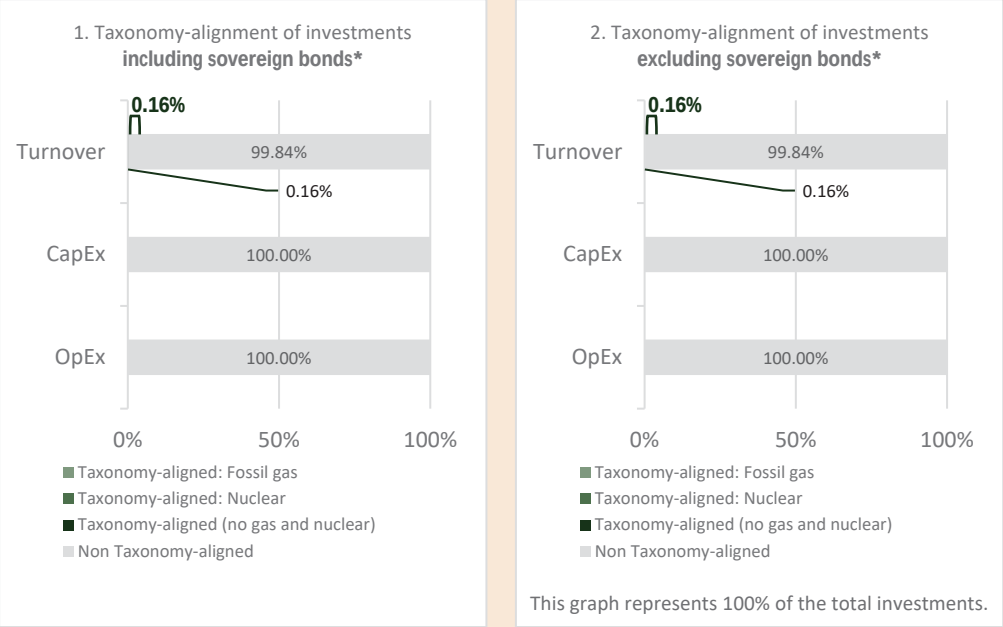
☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024
EU Taxonomy Alignment	**0.16%**	**0.27%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.75% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

52.53% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) Ancillary liquid assets (i.e. bank deposit at sight) which are held for purposes of liquidity management; (ii) Money market instruments, money market funds held for treasury purposes; (iii) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **63** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **33** companies across **3** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**33.71%**
Environmental Stewardship	Biodiversity, Water and Waste	**13.48%**

Human Rights	Social and Employee Matters	**28.09%**
Labour Standards		**24.72%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) American Select
Legal entity identifier: 549300J8ZUHECEKDE474

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 66.45% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a slightly lower ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.69** and the benchmark rating was **2.68** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **90.45%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **66.45%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.69 vs 2.68**	**2.50 vs 2.54**	**2.21 vs 2.50**
At least 50% of the Portfolio in strongly rated companies[3]	**90.45%**	**88.04%**	**89.35%**
At least 20% of the Portfolio in sustainable investments	**66.45%**	**52.22%**	**37.42%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

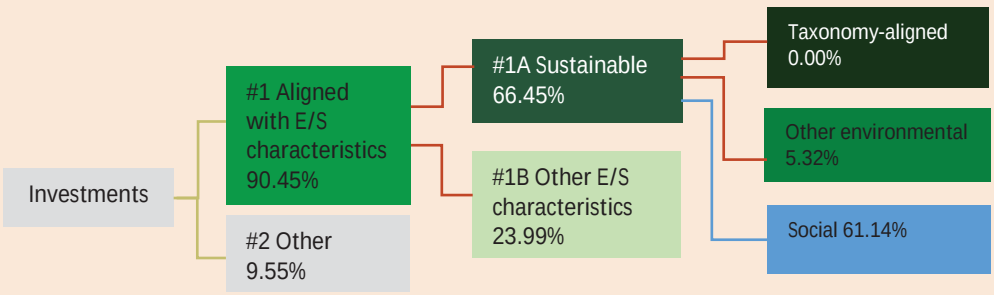
Issuer name	Sector	Average weight	Country
NVIDIA Corporation	Information Technology	8.54%	United States
Microsoft Corporation	Information Technology	8.39%	United States
Amazon.com, Inc.	Consumer Discretionary	5.87%	United States
Alphabet Inc.	Communication Services	5.43%	United States
Apple Inc.	Information Technology	5.18%	United States

JPMorgan Chase & Co.	Financials	4.24%	United States
Meta Platforms, Inc.	Communication Services	3.66%	United States
Charles Schwab Corporation	Financials	3.30%	United States
Eli Lilly and Company	Health Care	2.75%	United States
Eaton Corporation plc	Industrials	2.68%	United States
Bank of America Corporation	Financials	2.60%	United States
BlackRock, Inc.	Financials	2.30%	United States
Costco Wholesale Corporation	Consumer Staples	2.25%	United States
TJX Companies, Inc.	Consumer Discretionary	2.23%	United States
Vertex Pharmaceuticals Incorporated	Health Care	2.18%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*
Communication Services	10.10%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.00% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data

providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?**

☐ Yes:

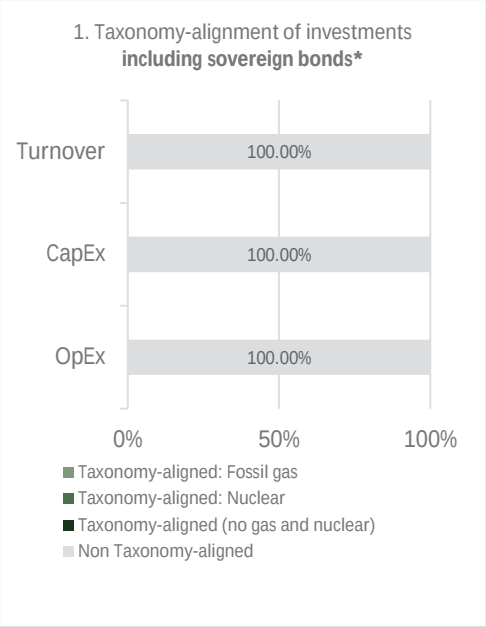
☐ In fossil gas ☐ In nuclear energy

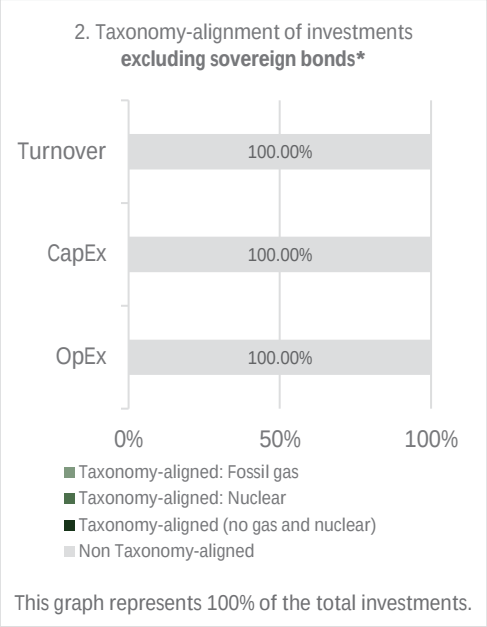
☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024
EU Taxonomy Alignment	**0.00%**	**0.30%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

5.32% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

61.14% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **50** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **22** companies across **2** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**33.78%**
Environmental Stewardship	Biodiversity, Water and Waste	**13.51%**

Human Rights	Social and Employee Matters	**24.32%**
Labour Standards		**28.38%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) American Smaller Companies
Legal entity identifier: 549300FL849SFZ3EMB26

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 18.41% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **10%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.60** and the benchmark rating was **2.76** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **76.79%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **10%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **18.41%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available.

The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Brixmor Property Group Inc.	Real Estate	3.12%	United States
Moelis & Company.	Financials	2.97%	United States
Voya Financial, Inc.	Financials	2.60%	United States
SiTime Corporation	Information Technology	2.42%	United States

What was the proportion of sustainability-related investments?

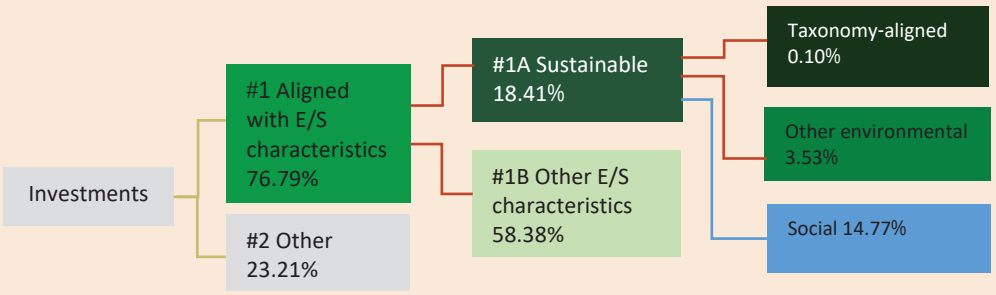
What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.10% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

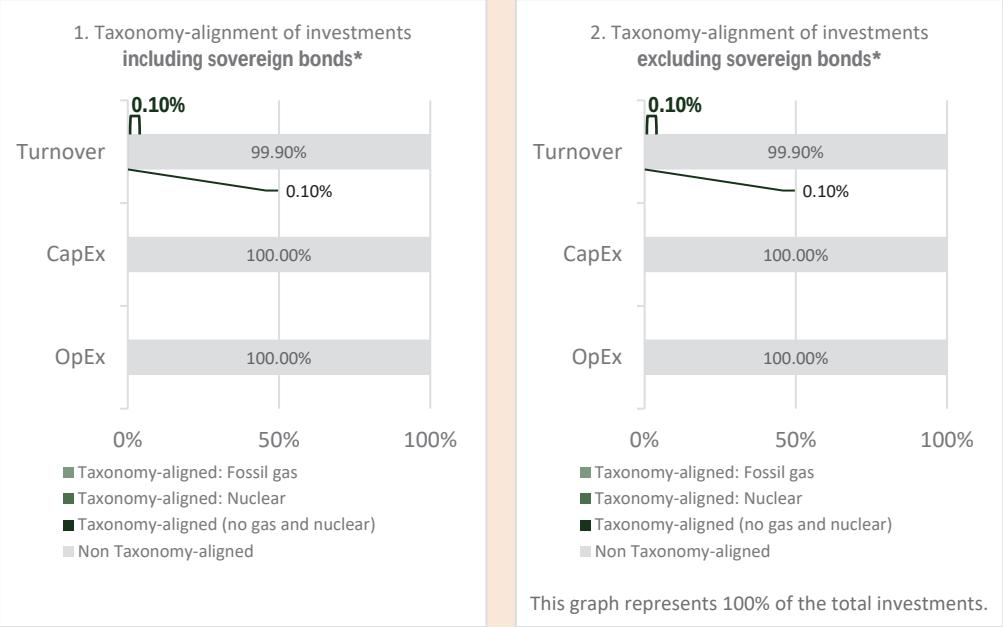
☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.10%**	**0.36%**	**0.00%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

3.53% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

14.77% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

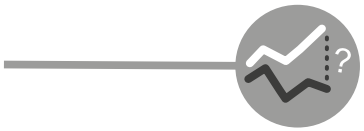
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **10** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **9** companies across **2** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**41.67%**
Environmental Stewardship	Biodiversity, Water and Waste	**25.00%**

Human Rights	Social and Employee Matters	**0.00%**
Labour Standards		**33.33%**



How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Asia Equities
Legal entity identifier: 549300NJZIZV56FVQ648

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.20% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **10%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.24** and the benchmark rating was **2.40** (on a scale of 1-5, where lower is better)[2].

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **89.60%** in strongly rated companies.

- The Portfolio held over **10%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **47.20%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024	2023
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.24 vs 2.40**	**2.35 vs 2.52**	**2.43 vs 2.57**	**2.08 vs 2.48**
At least 50% of the Portfolio in strongly rated companies[3]	**89.60%**	**80.42%**	**81.16%**	**88.80%**
At least 10% of the Portfolio in sustainable investments	**47.20%**	**39.28%**	**36.84%**	**N/A**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches	No Breaches

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available.

The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Taiwan Semiconductor Manufacturing Company Limited	Information Technology	9.90%	Taiwan
Tencent Holdings Limited	Communication Services	6.91%	China
SK hynix Inc.	Information Technology	3.75%	Korea
Samsung Electronics Co., Ltd.	Information Technology	3.28%	Korea

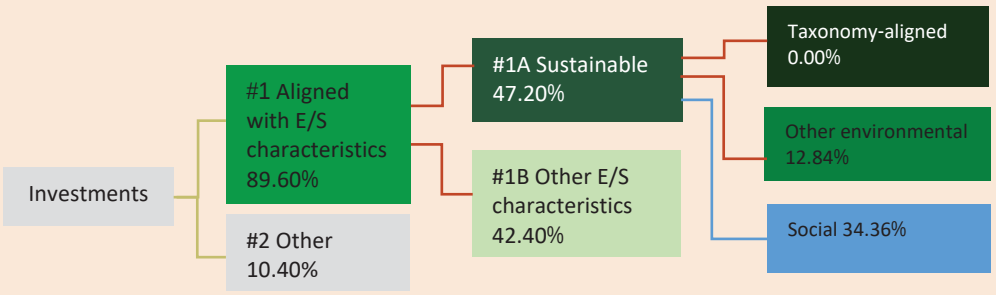
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.00% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

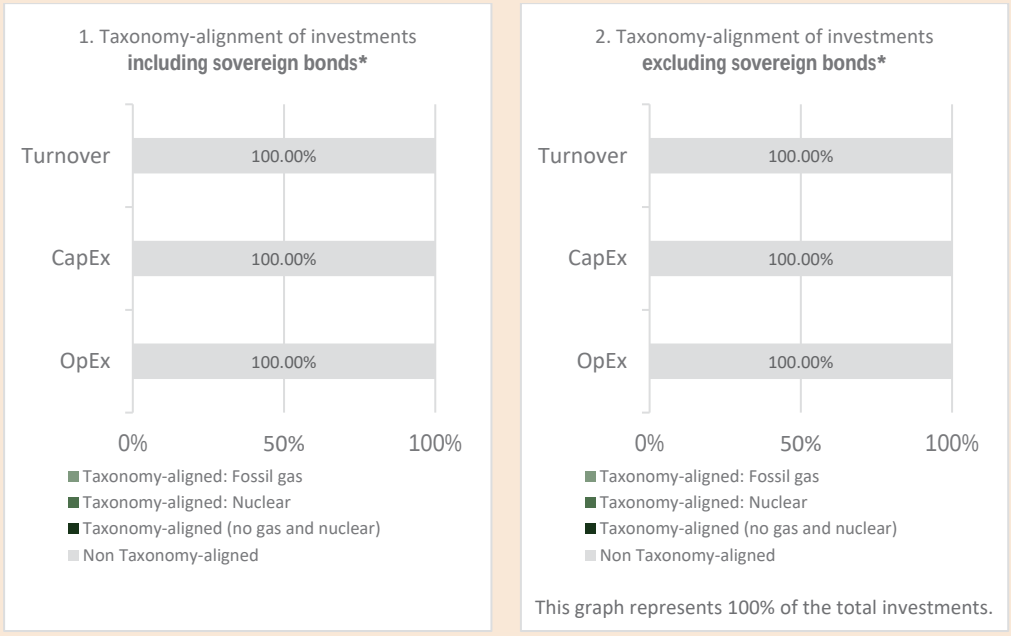
☐ In fossil gas ☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.00%**	**0.00%**	**0.00%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

12.84% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

34.36% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social

characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **27** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **16** companies across **5** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**35.94%**
Environmental Stewardship	Biodiversity, Water and Waste	**31.25%**
Human Rights	Social and Employee Matters	**14.06%**
Labour Standards		**18.75%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) US Contrarian Core Equities
Legal entity identifier: 54930018O2H517KS6C10

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 59.26% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **10%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.58** and the benchmark rating was **2.68** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **89.26%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **10%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **59.26%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.58 vs 2.68**	**2.43 vs 2.54**	**2.48 vs 2.54**
At least 50% of the Portfolio in strongly rated companies[3]	**89.26%**	**90.70%**	**97.11%**
At least 10% of the Portfolio in sustainable investments	**59.26%**	**53.09%**	**47.13%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

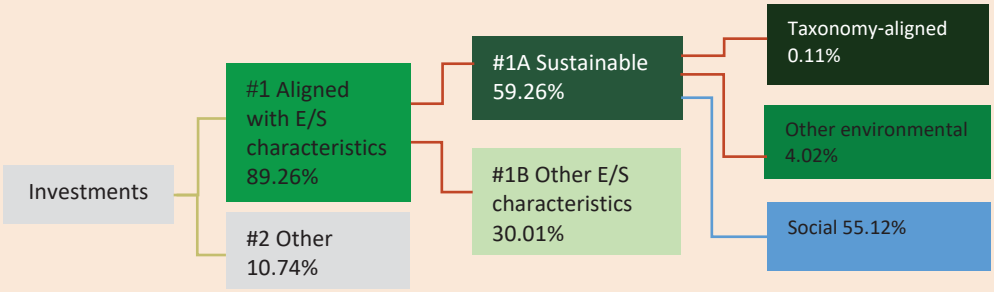
The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
NVIDIA Corporation	Information Technology	8.11%	United States
Microsoft Corporation	Information Technology	7.32%	United States
Apple Inc.	Information Technology	5.52%	United States
Alphabet Inc.	Communication Services	4.88%	United States
Amazon.com, Inc.	Consumer Discretionary	4.65%	United States
Meta Platforms, Inc.	Communication Services	2.70%	United States
Broadcom Inc.	Information Technology	2.45%	United States
Eli Lilly and Company	Health Care	2.24%	United States
Bank of America Corporation	Financials	1.88%	United States
JPMorgan Chase & Co.	Financials	1.88%	United States
Visa Inc.	Financials	1.76%	United States
BlackRock, Inc.	Financials	1.63%	United States
Chevron Corporation	Energy	1.49%	United States
eBay Inc.	Consumer Discretionary	1.46%	United States
Vertex Pharmaceuticals Incorporated	Health Care	1.41%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

Sector	% of Net Assets*
Communication Services	12.38%
Diversified Telecommunication Services	1.51%
Entertainment	2.77%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.11% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

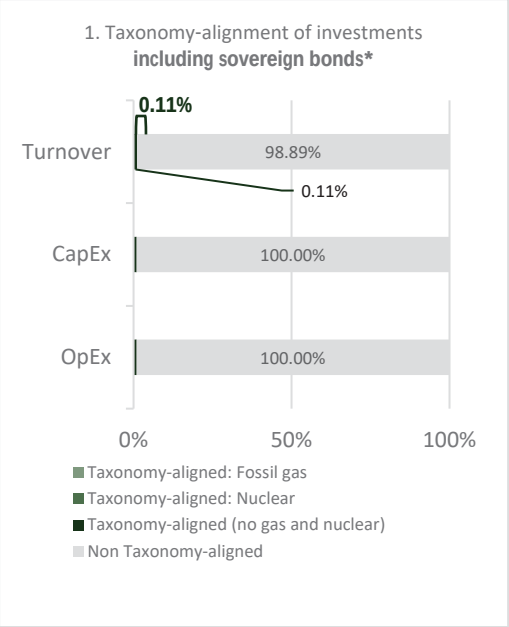
☒ No

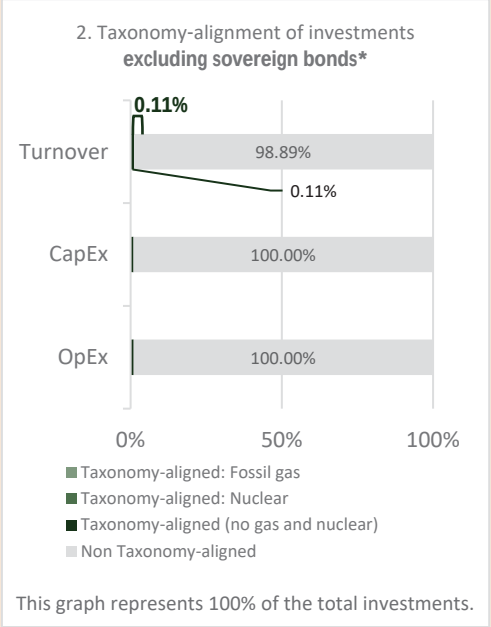
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024
EU Taxonomy Alignment	**0.11%**	**0.00%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.02% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

55.12% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **61** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **29** companies across **2** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**35.16%**
Environmental Stewardship	Biodiversity, Water and Waste	**12.09%**

Human Rights	Social and Employee Matters	**30.77%**
Labour Standards		**21.98%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) US Disciplined Core Equities
Legal entity identifier: 549300EZCBHJI17ZEQ30

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.22% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 13 August 2025, the Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e.

holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.66** and the benchmark rating was **2.68** (on a scale of 1-5, where lower is better).

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **88.30%** in strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **53.22%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

Not applicable. This is the first reporting period for the Portfolio and a comparison of the sustainability indictors will be made in the next periodic report.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

– – – *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13/08/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
NVIDIA Corporation	Information Technology	9.28%	United States
Alphabet Inc.	Communication Services	6.75%	United States

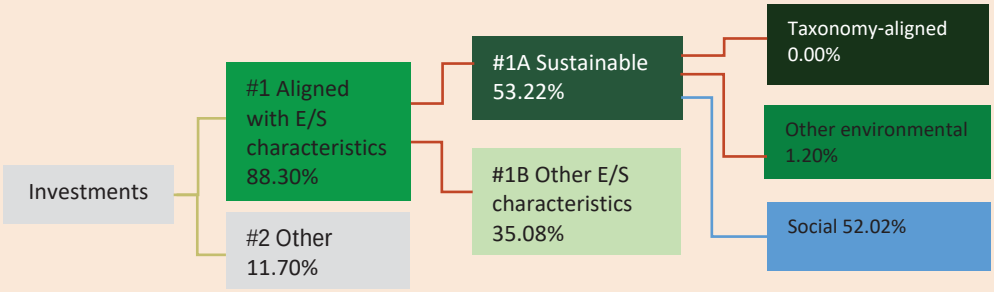
Arista Networks, Inc.	Information Technology	1.68%	United States
Salesforce, Inc.	Information Technology	1.66%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.00% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves

Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

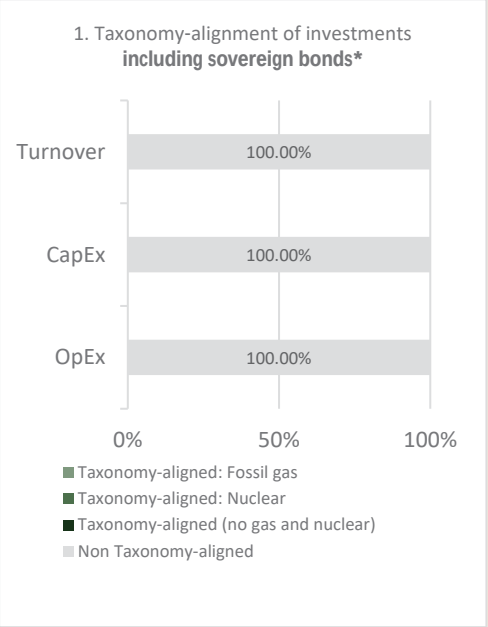
☐ Yes:

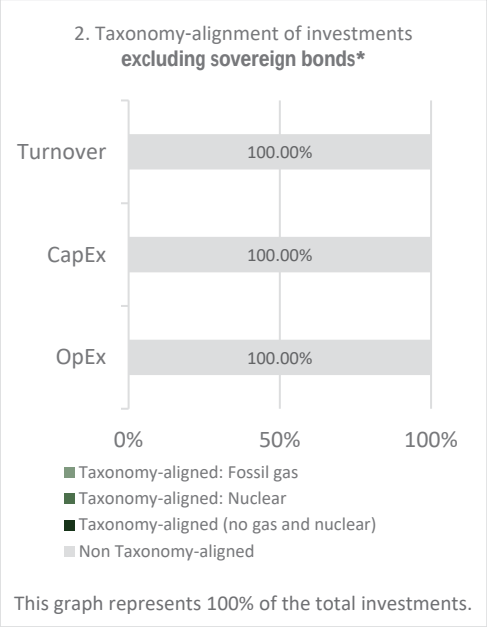
☐ In fossil gas ☐ In nuclear energy

☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

1.20% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

52.02% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **59** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **32** companies across **2** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**30.77%**
Environmental Stewardship	Biodiversity, Water and Waste	**13.19%**
Human Rights	Social and Employee Matters	**28.57%**
Labour Standards		**27.47%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Pan European Equities
Legal entity identifier: 5493003HOJGB5U7D3492

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 59.55% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.14** and the benchmark rating was **2.37** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

over the reporting period. On 31 March 2026, the Portfolio held **93.78%** in strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **59.55%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024	2023
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.14 vs 2.37**	**2.11 vs 2.29**	**1.98 vs 2.21**	**2.70 vs 2.79**
At least 50% of the Portfolio in strongly rated companies[3]	**93.78%**	**97.48%**	**98.12%**	**98.60%**
At least 20% of the Portfolio in sustainable investments	**59.55%**	**68.58%**	**61.28%**	**N/A**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches	No Breaches

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
ASML Holding NV	Information Technology	4.52%	Netherlands
Novartis AG	Health Care	3.99%	Switzerland
Siemens Aktiengesellschaft	Industrials	3.47%	Germany

SAP SE	Information Technology	3.22%	Germany
Schneider Electric SE	Industrials	3.05%	France
AstraZeneca PLC	Health Care	2.92%	United Kingdom
Rolls-Royce Holdings plc	Industrials	2.78%	United Kingdom

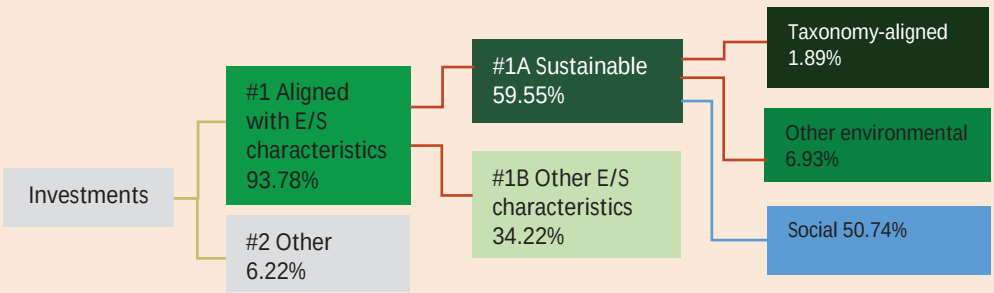
Compagnie de Saint-Gobain	Industrials	2.21%	France
Airbus SE	Industrials	2.17%	France

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

*Due to rounding, the percentages for subsectors may not total to the sector percentage.
Cash holdings are not shown as a % of net assets in the table above.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

1.89% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

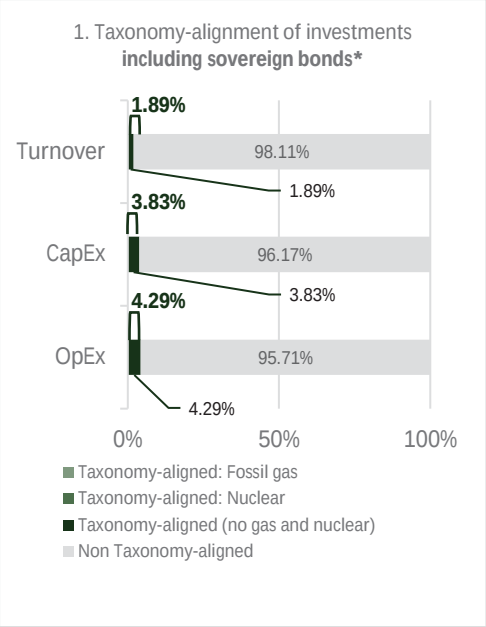
☒ No

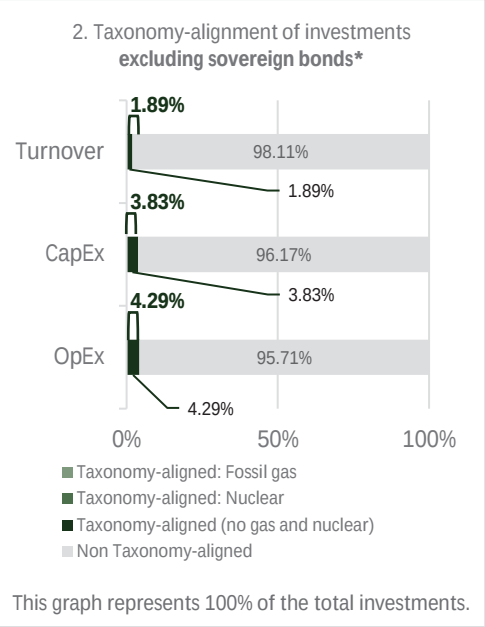
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

6.93% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

50.74% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **72** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **29** companies across **9** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**34.78%**
Environmental Stewardship	Biodiversity, Water and Waste	**18.48%**
Human Rights	Social and Employee Matters	**13.04%**
Labour Standards		**33.70%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Pan European Focus
Legal entity identifier: 5493002FBG0GVPH39L63

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.30% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **1.92** and the benchmark rating was **2.37** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **97.58%** in

[1]The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **53.30%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**1.92 vs 2.37**	**1.86 vs 2.35**
At least 50% of the Portfolio in strongly rated companies[3]	**97.58%**	**88.44%**
At least 20% of the Portfolio in sustainable investments	**53.30%**	**50.01%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

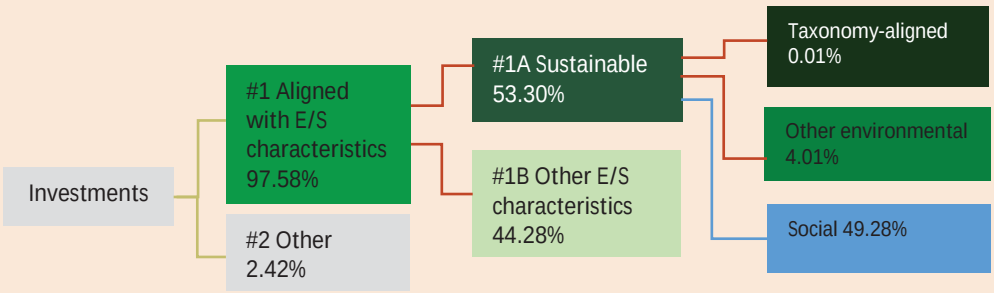
Issuer name	Sector	Average weight	Country
Rolls-Royce Holdings plc	Industrials	6.41%	United Kingdom
Safran SA	Industrials	5.95%	France

ASML Holding NV	Information Technology	4.30%	Netherlands
Munchener Ruckversicherungs-Gesellschaft Aktiengesellschaft	Financials	4.09%	Germany
Siemens Energy AG	Industrials	3.99%	Germany
ASM International N.V.	Information Technology	3.65%	Netherlands
Hannover Ruck SE	Financials	3.27%	Germany
Atlas Copco AB	Industrials	3.27%	Sweden
Informa Plc	Communication Services	3.02%	United Kingdom
ABB Ltd.	Industrials	2.87%	Switzerland
Schneider Electric SE	Industrials	2.83%	France
Next plc	Consumer Discretionary	2.46%	United Kingdom
Sandvik AB	Industrials	2.44%	Sweden
EssilorLuxottica S.A.	Health Care	2.43%	France
SAP SE	Information Technology	2.37%	Germany

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*
Communication Services	0.71%
Diversified Telecommunication Services	0.71%
Consumer Discretionary	3.40%
Broadline Retail	1.42%
Textiles Apparel & Luxury Goods	1.97%
Consumer Staples	8.01%
Beverages	6.78%
Household Products	1.23%
Financials	21.35%
Banks	18.57%
Capital Markets	2.78%
Health Care	14.49%
Health Care Equipment & Supplies	1.56%
Pharmaceuticals	12.92%
Industrials	26.97%
Aerospace & Defense	9.95%
Air Freight & Logistics	1.33%
Electrical Equipment	7.36%
Machinery	8.34%
Information Technology	15.40%
Communications Equipment	1.00%
Semiconductors & Semiconductor Equipment	14.39%
Materials	4.60%
Chemicals	2.00%
Construction Materials	2.60%
Utilities	2.66%
Electric Utilities	1.60%
Multi-Utilities	1.06%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.01% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This

taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?**

☐ Yes:

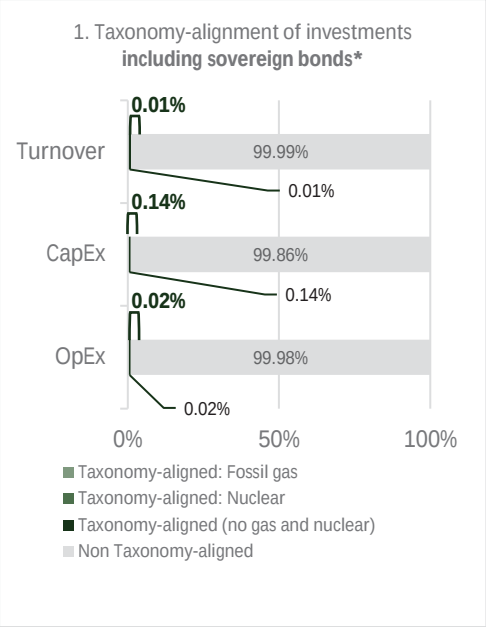
☐ In fossil gas ☐ In nuclear energy

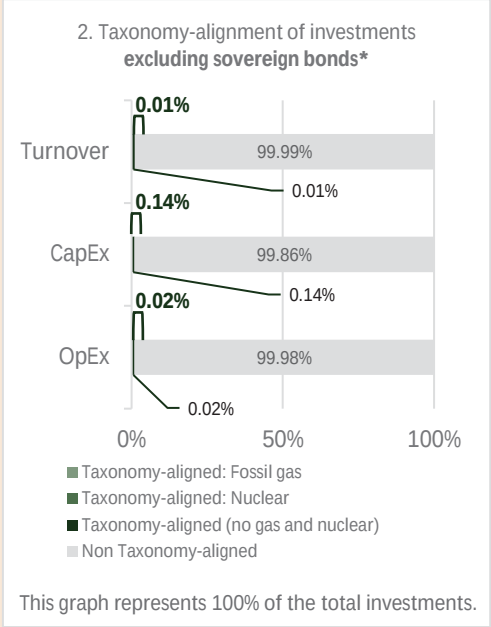
☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2026	31/03/2025
EU Taxonomy Alignment	**0.01%**	**1.57%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.01% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

49.28% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **32** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **16** companies across **10** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**28.89%**
Environmental Stewardship	Biodiversity, Water and Waste	**24.44%**

Human Rights	Social and Employee Matters	**13.33%**
Labour Standards		**33.33%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Pan European Small Cap Opportunities
Legal entity identifier: 54930003H2F9R836UM93

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.84% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **15%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.02** and the benchmark rating was **2.10** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **86.46%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **15%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **26.84%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.02 vs 2.10**	**2.10 vs 2.18**	**2.16 vs 2.22**
At least 50% of the Portfolio in strongly rated companies[3]	**86.46%**	**79.50%**	**77.61%**
At least 15% of the Portfolio in sustainable investments	**26.84%**	**21.84%**	**20.35%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Nexans SA	Industrials	2.35%	France
Elis SA	Industrials	2.25%	France
Storebrand ASA	Financials	1.98%	Norway
Safestore Holdings plc	Real Estate	1.96%	United Kingdom
flatexDEGIRO AG	Financials	1.92%	Germany
Karnov Group AB	Communication Services	1.90%	Sweden

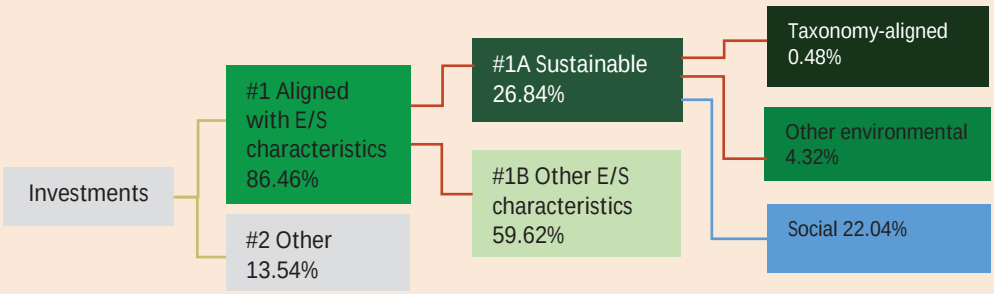
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.48% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

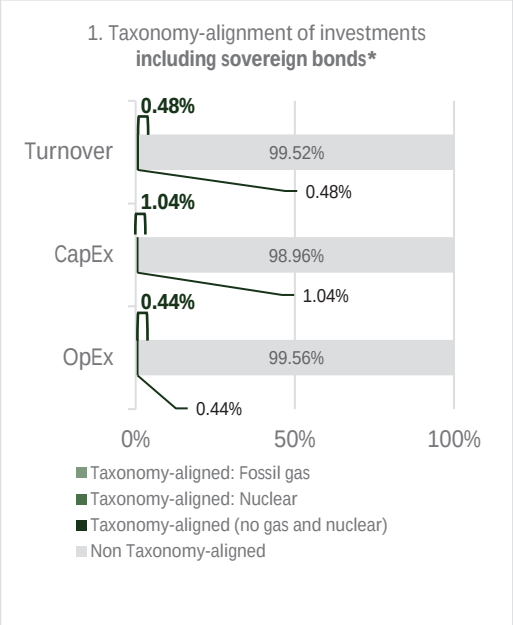
☐ Yes:

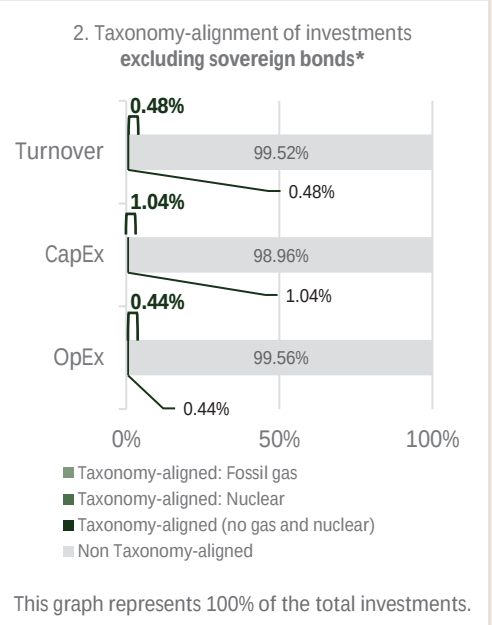
☐ In fossil gas ☐ In nuclear energy

☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





This graph represents 100% of the total investments.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.48% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2026	31/03/2025	31/03/2024
EU Taxonomy Alignment	**0.48%**	**0.00%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.32% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

22.04% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **31** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **12** companies across **6** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**37.14%**
Environmental Stewardship	Biodiversity, Water and Waste	**8.57%**
Human Rights	Social and Employee Matters	**5.71%**
Labour Standards		**48.57%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Pan European Smaller Companies
Legal entity identifier: 549300FG0S32L53EKJ87

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.63% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.04** and the benchmark rating was **2.10** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **88.95%** in

[1]The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **28.63%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024	2023

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Elis SA	Industrials	3.01%	France
Nexans SA	Industrials	2.40%	France
Storebrand ASA	Financials	2.04%	Norway
Safestore Holdings plc	Real Estate	1.99%	United Kingdom

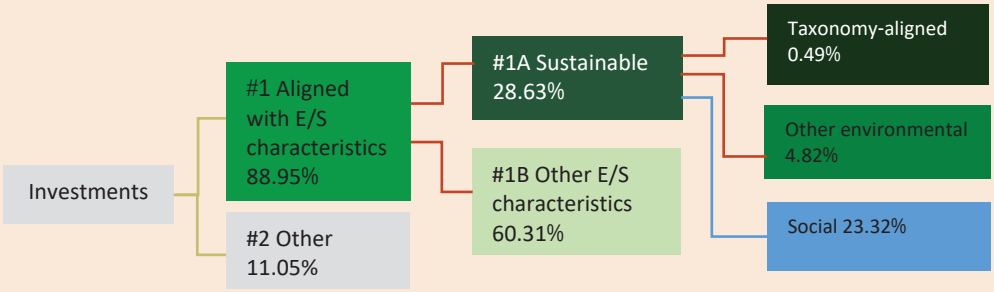
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.49% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

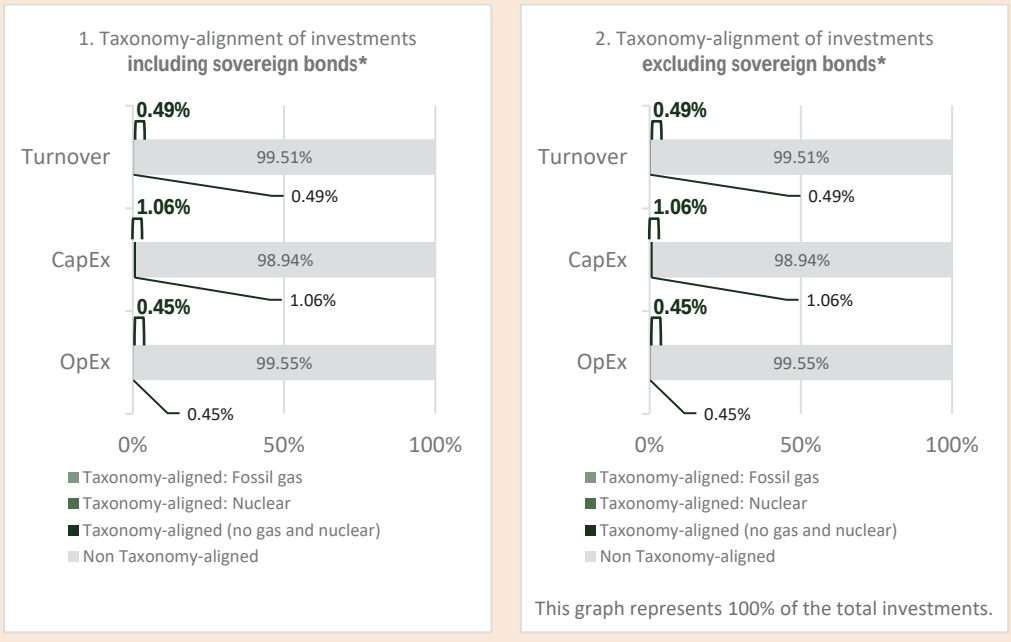
☐ In fossil gas ☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.49% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.49%**	**0.02%**	**0.03%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

4.82% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

23.32% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **31** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **12** companies across **6** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**37.14%**
Environmental Stewardship	Biodiversity, Water and Waste	**8.57%**
Human Rights	Social and Employee Matters	**5.71%**
Labour Standards		**48.57%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) European Select
Legal entity identifier: 549300MKHX2X26Q8CM51

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.46% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.12** and the benchmark rating was **2.29** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **91.33%** in

[1]The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **57.46%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024	2023
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.12 vs 2.29**	**1.87 vs 2.20**	**1.87 vs 2.17**	**2.34 vs 2.73**
At least 50% of the Portfolio in strongly rated companies[3]	**91.33%**	**93.33%**	**95.00%**	**79.50%**
At least 20% of the Portfolio in sustainable investments	**57.46%**	**53.83%**	**56.24%**	**N/A**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

– – – *How were the indicators for adverse impacts on sustainability factors taken into account?*

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

– – – *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
SAP SE	Information Technology	7.16%	Germany
ASML Holding NV	Information Technology	5.16%	Netherlands
Safran SA	Industrials	4.18%	France
Deutsche Borse AG	Financials	3.35%	Germany

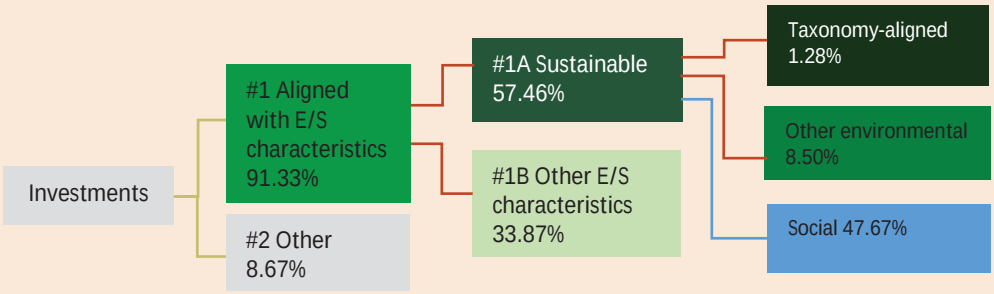
DSV A/S	Industrials	2.56%	Denmark
L'Oreal S.A.	Consumer Staples	2.40%	France
Schneider Electric SE	Industrials	2.30%	France
Hermes International Societe en commandite par actions	Consumer Discretionary	2.30%	France

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*
Communication Services	1.45%
Diversified Telecommunication Services	1.45%
Consumer Discretionary	4.11%
Specialty Retail	2.14%
Textiles Apparel & Luxury Goods	1.97%
Consumer Staples	6.19%
Beverages	3.16%
Personal Care Products	3.04%
Financials	22.08%
Banks	18.48%
Capital Markets	3.60%
Health Care	9.70%
Health Care Equipment & Supplies	2.02%
Pharmaceuticals	7.68%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Industrials	29.46%
Aerospace & Defense	9.51%
Air Freight & Logistics	1.30%
Electrical Equipment	11.02%
Machinery	7.62%
Information Technology	17.92%

Construction Materials	1.99%
Utilities	2.20%
Electric Utilities	1.07%
Multi-Utilities	1.13%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

1.28% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

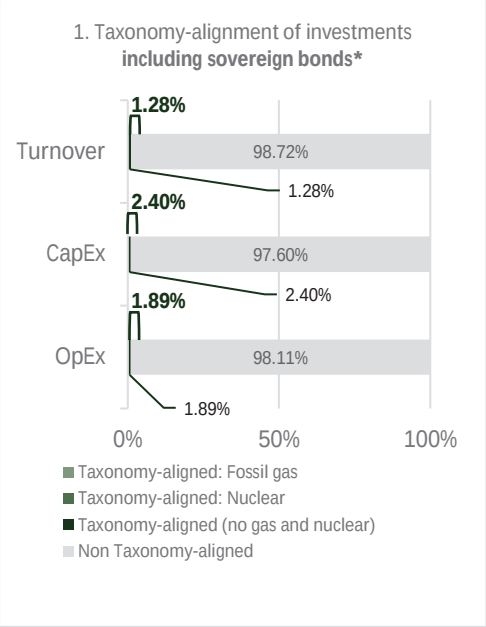
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

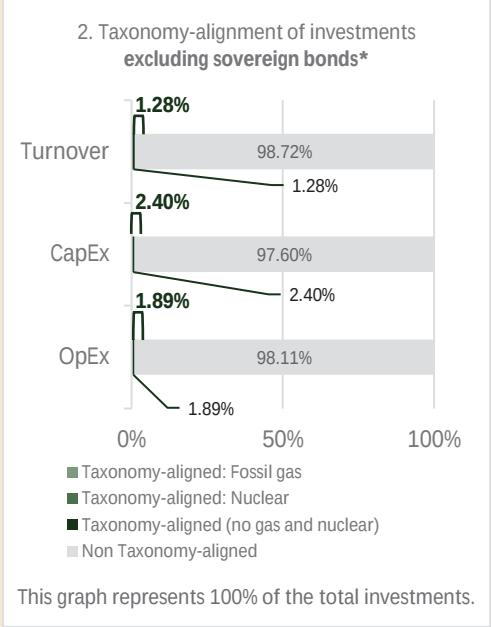
☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

- *What was the share of investments made in transitional and enabling activities?*

  0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

  1.27% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**1.28%**	**0.92%**	**1.08%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

8.50% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

47.67% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social

characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **38** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **18** companies across **9** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**38.18%**
Environmental Stewardship	Biodiversity, Water and Waste	**25.45%**
Human Rights	Social and Employee Matters	**7.27%**
Labour Standards		**29.09%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) European Smaller Companies
Legal entity identifier: 54930003VV6JZQNNIC16

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.24% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc).Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.03** and the benchmark rating was **2.07** (on a scale of 1-5, where lower is better).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **86.50%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **33.24%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Elis SA	Industrials	3.01%	France
Storebrand ASA	Financials	2.92%	Norway

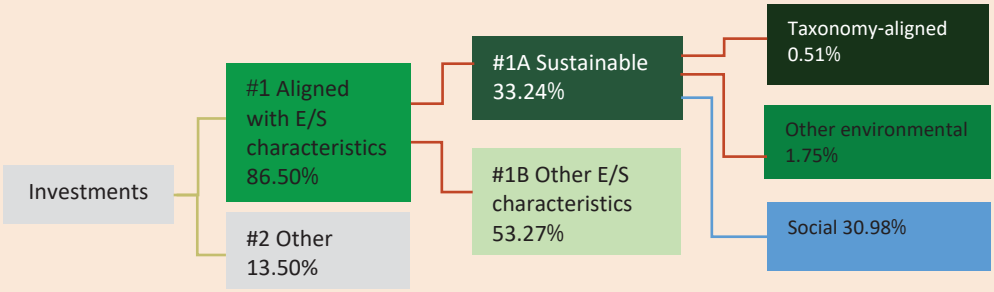
What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.51% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data

providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

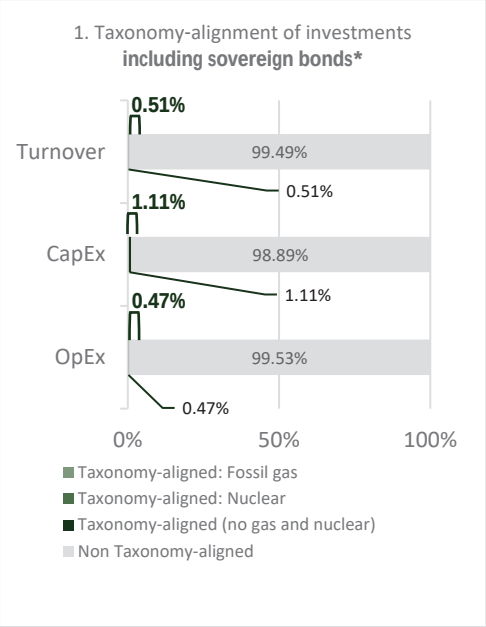
☒ No

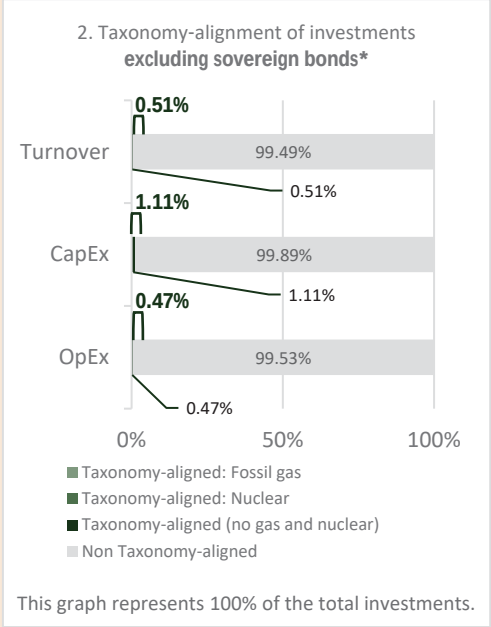
[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





This graph represents 100% of the total investments.

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.51% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

	31/03/2026	31/03/2025	31/03/2024	31/03/2023
EU Taxonomy Alignment	**0.51%**	**0.04%**	**0.05%**	**0.00%**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

1.75% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

30.98% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **12** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **8** companies across **7** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**46.15%**
Environmental Stewardship	Biodiversity, Water and Waste	**7.69%**

Human Rights	Social and Employee Matters	**0.00%**
Labour Standards		**46.15%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) UK Equities
Legal entity identifier: 549300XFQJOSJSM28C10

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 69.65% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **20%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

- *How did the sustainability indicators perform?*

  The Portfolio has the following sustainability indicators:

  - The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **2.32** and the benchmark rating was **2.54** (on a scale of 1-5, where lower is better).

  - The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **93.14%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **20%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **69.65%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**2.32 vs 2.54**	**2.27 vs 2.57**	**2.08 vs 2.48**
At least 50% of the Portfolio in strongly rated companies[3]	**93.14%**	**95.38%**	**93.18 %**
At least 20% of the Portfolio in sustainable investments	**69.65%**	**72.83%**	**46.46%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

The sustainability indicators have been subject to an assurance review by a third party auditor.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine

"significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

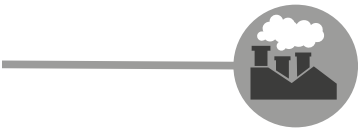
The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.



How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

Issuer name	Sector	Average weight	Country
AstraZeneca PLC	Health Care	7.42%	United Kingdom
Shell plc	Energy	6.36%	United Kingdom
Unilever PLC	Consumer Staples	5.16%	United Kingdom

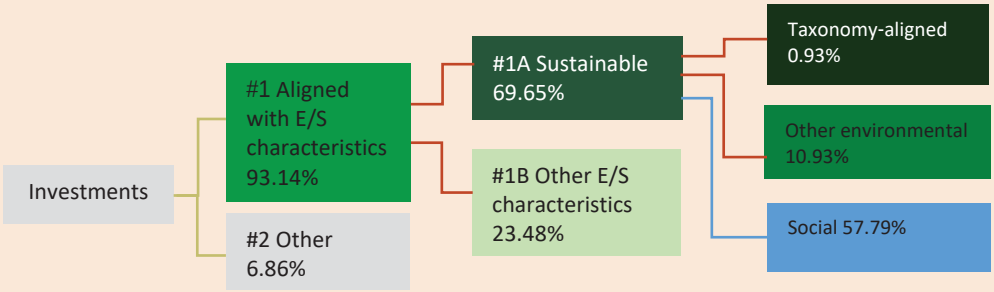
The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

NatWest Group Plc	Financials	3.82%	United Kingdom
GSK plc	Health Care	3.58%	United Kingdom
London Stock Exchange Group plc	Financials	3.41%	United Kingdom
HSBC Holdings Plc	Financials	3.32%	United Kingdom
RELX PLC	Industrials	3.27%	United Kingdom
Rio Tinto plc	Materials	3.27%	United Kingdom
Standard Chartered PLC	Financials	3.25%	United Kingdom
Experian PLC	Industrials	3.11%	United Kingdom
IMI plc	Industrials	2.91%	United Kingdom
Weir Group PLC	Industrials	2.85%	United Kingdom
Intertek Group plc	Industrials	2.82%	United Kingdom
BT Group plc	Communication Services	2.72%	United Kingdom

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.93% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

10.93% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

57.79% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **91** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **31** companies across **2** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**20.79%**
Environmental Stewardship	Biodiversity, Water and Waste	**4.95%**
Human Rights	Social and Employee Matters	**14.85%**
Labour Standards		**59.41%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Japan Equities
Legal entity identifier: 5493000LMPLEZ8VQSU41

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 32.33% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to create a Portfolio that has a better weighted average ESG Materiality Rating i.e. holding a higher proportion of companies with strong ESG Materiality Ratings (ratings of 1 to 3) than the benchmark, over rolling 12-month periods.

- Maintaining at least **50%** of the Portfolio holdings in companies that have a strong ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **5%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- The Portfolio maintained a better ESG Materiality Rating versus the benchmark, assessed over rolling 12-month periods. On 31 March 2026, the Portfolio rating was **1.78** and the benchmark rating was **1.86** (on a scale of 1-5, where lower is better).
- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **91.78%** in strongly rated companies[2].

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

[2] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

- The Portfolio held over **5%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **32.33%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

	2026	2025	2024
ESG Materiality Rating of the Portfolio vs the Benchmark (12 month rolling average)	**1.78 vs 1.86**	**1.81 vs 1.90**	**1.90 vs 1.97**
At least 50% of the Portfolio in strongly rated companies[3]	**91.78%**	**86.53%**	**81.44%**
At least 5% of the Portfolio in sustainable investments	**32.33%**	**21.13%**	**23.90%**
The number of companies determined to be in breach of accepted international standards and principles.	No Breaches	No Breaches	No Breaches
Thermal coal, tobacco, controversial and nuclear weapons exclusions (subject to revenue thresholds).	No Breaches	No Breaches	No Breaches

The sustainability indicators have been subject to an assurance review by a third party auditor.

[3] Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

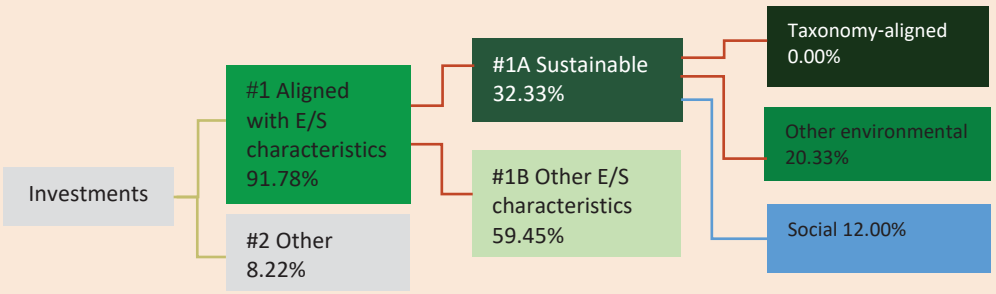
The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Mitsubishi UFJ Financial Group, Inc.	Financials	5.57%	Japan
Hitachi, Ltd.	Industrials	5.01%	Japan
Sony Group Corporation	Consumer Discretionary	4.63%	Japan
Tokyo Electron Ltd.	Information Technology	3.96%	Japan
Tokyo Tatemono Co., Ltd.	Real Estate	3.59%	Japan
Tokio Marine Holdings, Inc.	Financials	3.40%	Japan
Niterra Co., Ltd.	Consumer Discretionary	2.97%	Japan
Kinden Corporation	Industrials	2.97%	Japan
ORIX Corporation	Financials	2.93%	Japan
Nomura Holdings, Inc.	Financials	2.83%	Japan
Toyota Motor Corp.	Consumer Discretionary	2.62%	Japan
Sankyo Co., Ltd.	Consumer Discretionary	2.56%	Japan
Itochu Corporation	Industrials	2.55%	Japan
Sanwa Holdings Corporation	Industrials	2.43%	Japan
Recruit Holdings Co., Ltd.	Industrials	2.29%	Japan

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

Sector	% of Net Assets*
Communication Services	3.09%
Entertainment	0.61%
Media	2.00%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective.

0.00% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which

any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves
Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?**

☐ Yes:

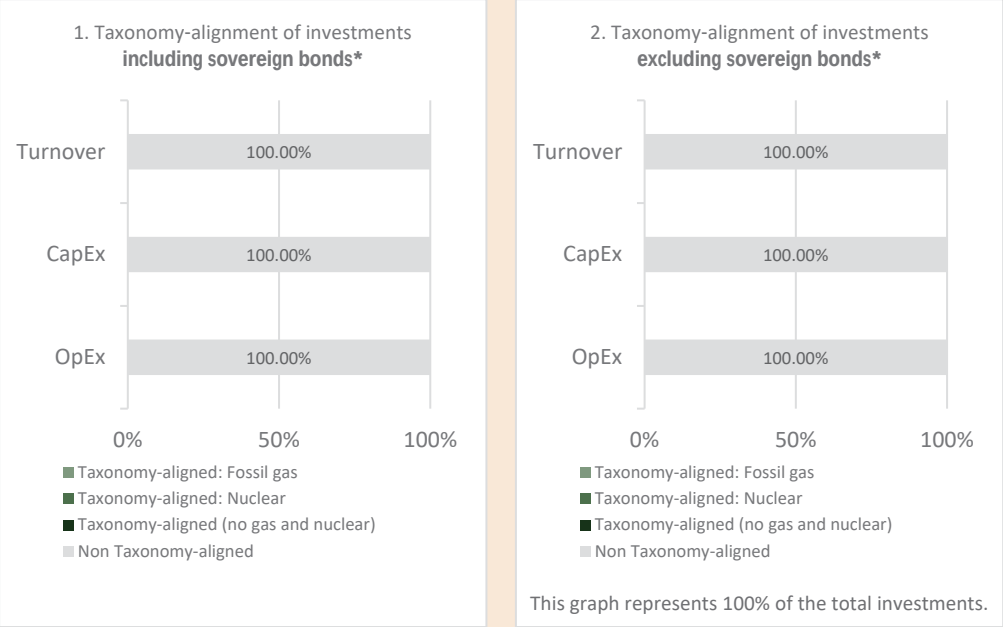
☐ In fossil gas ☐ In nuclear energy

☒ No

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of investments made in transitional and enabling activities?

0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

	31/03/2026	31/03/2025	31/03/2024
EU Taxonomy Alignment	**0.00%**	**0.00%**	**0.00%**

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

20.33% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

12.00% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5 or companies not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **16** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **4** companies across **1** country and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**46.15%**
Environmental Stewardship	Biodiversity, Water and Waste	**30.77%**
Human Rights		**7.69%**

Labour Standards	Social and Employee Matters	**15.38%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

`ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CT (Lux) Global Real Estate Securities
Legal entity identifier: 529900QD75LGEGT2C933

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective: ___**	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.36% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective: ___**	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 13th November 2025, the Portfolio promoted environmental and/or social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- The Investment Manager used its proprietary ESG Materiality Rating Model ("ESGM Model") to maintain at least **50%** of the Portfolio holdings in companies that have a strong

ESG Materiality Rating, using the ESGM Model[1]. A strong rating indicates that a company has less exposure to financially material ESG risks relevant to its industry (risks that are likely to have a material impact on a company's financial performance (profits, cash flow etc). Only investments in companies that have strong ESG Materiality Ratings are considered as aligned with the environmental and/or social characteristics promoted by the Portfolio.

- Holding at least **10%** of the Portfolio in sustainable investments; companies that are making a positive contribution to society and/or the environment.

- Excluding companies, that, in the Investment Manager's opinion, are in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.

- Excluding companies that derive revenue above certain thresholds from thermal coal extraction and generation, tobacco production and indirect involvement in nuclear weapons.

- Excluding companies with involvement in controversial weapons, in line with the Investment Manager's Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.

- Excluding companies involved in the development of new thermal coal mining or power generation facilities.

- Engaging with companies that have weaker ESG Materiality Ratings to support the promotion of environmental and social characteristics and to encourage better management of financially material ESG risks over time on issues ranging from climate change to board independence and diversity.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Portfolio has the following sustainability indicators:

- Although not a binding sustainability indicator, on 31 March 2026, the overall ESG Materiality rating of the Portfolio was **1.50** (on a scale of 1 to 5 where 1 is strongest and 5 is weakest).

- The Portfolio maintained over **50%** of its holdings in strongly rated companies over the reporting period. On 31 March 2026, the Portfolio held **98.06%** in

[1] The Investment Manager may (i) assess companies that are not covered by its ESGM Model using its own research, (ii) rely on its own research to depart from a rating produced by its ESGM Model that it considers to be inaccurate, (iii) engage with companies that have either a weaker ESG Materiality Rating, or are not covered by the ESGM Model, for improvement, or (iv) include companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments, to achieve this 50% minimum commitment.

strongly rated companies[2].

- The Portfolio held over **10%** of its holdings in sustainable investments over the reporting period. On 31 March 2026, **28.36%** of the Portfolio was held in sustainable investments.

- The Portfolio excluded companies that the Investment Manager determined were in breach of accepted international standards (for example the UN Global Compact Principles). No breaches were identified during the reporting period.

- The Portfolio excluded companies that derived revenue above certain thresholds from thermal coal extraction and generation (or that were involved in the development of new thermal coal mining or power generation facilities), tobacco production and indirect involvement in nuclear weapons. No breaches were identified during the reporting period.

- The Portfolio adhered to the Investment Manager's Controversial Weapons Policy, and the exclusion of companies with direct involvement in nuclear weapons. No breaches were identified during the reporting period.

...and compared to previous periods?

Not applicable. This is the first reporting period for the Portfolio and a comparison of the sustainability indicators will be made in the next periodic report.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Investment Manager used one or more of the criteria below to identify sustainable investments that contribute to an environmental or social objective:

• The contribution of a company to one or more of the 17 Sustainable Development Goals (SDGs) that have a social or environmental objective. This is measured using a tool designed by the Investment Manager, which maps companies' individual revenue streams to the targets that underpin the SDGs as positive, neutral or negative. Where a company's revenues are at least 50% net positively aligned (i.e. where revenues that have a negative contribution to the SDGs have been subtracted from revenues that have a positive contribution), this indicates that it generates the majority of its revenue from sustainable solutions.

• A qualitative assessment that a company offers sustainable solutions, where the Investment Manager's due diligence concludes and evidences that the

[2]Includes companies that have either a weaker ESG Materiality rating, or are not covered by the ESGM Model, that qualify as sustainable investments.

contribution of a company's revenues aligned to the SDGs will increase over the medium term.

• A qualitative assessment and documented evidence that sustainability is a material business driver within a company's operations or business approach, which contributes to positive environmental or social outcomes.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure the sustainable investments do no significant harm (DNSH) to any environmental or social sustainable investment objective, the Investment Manager applied two additional checks:

• The exclusion of companies in the Portfolio that: (i) breach international standards and principles of governance (such as the UN Global Compact); (ii) are involved in controversial weapons; or (iii) generate revenues over specified thresholds in activities that are harmful to the environment and/or society.

• The consideration of Principal Adverse Impact (PAI) indicators. The Investment Manager considers and monitors all mandatory PAIs and certain voluntary PAIs that are deemed particularly relevant to the Portfolio and where robust data is available. The Investment Manager has developed thresholds for each indicator to determine "significance", capturing how material an indicator is for an industry or sector, and what is considered particularly poor practice relating to that indicator.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The model identifies harm when assessing a sustainable investment by using quantitative thresholds against a selection of PAI indicators. Companies which fall below these thresholds are flagged as potentially harmful and a review is undertaken to determine the materiality of the harm, whether harm has or is occurring, and whether mitigating activities are underway to address harm. Where data is not available, the Investment Manager seeks to satisfy that no significant harm has taken place through desk-based research or company engagement.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments held in the Portfolio were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on

Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

The Portfolio excluded companies which breached UN Global Compact (UNGC) principles and further considered good conduct when making investments. In addition, the DNSH checks also assessed companies for explicit harm against the underlying principles of the UNGC and OECD Guidelines.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager proactively considered the principal adverse impacts ("PAIs") of the investment decisions it made for the Portfolio on sustainability factors through a combination of exclusions, investment research and monitoring and engaging with investee companies.

As part of portfolio construction and stock selection, the Portfolio has in place exclusions that correspond to PAI indicators and investments that breach these exclusions cannot be held by the Portfolio. These exclusions applied by the Portfolio relate to thermal coal, global norms and controversial weapons. The Portfolio adhered to its exclusion policy during the reporting period.

In addition, the Investment Manager considered PAIs as part of research into, and engagement with, investee companies on environmental sustainability indicators relating to decarbonisation and biodiversity, and social factors such as board gender diversity and discrimination. Details of PAI engagement are outlined later in this report. PAIs were also considered as part of investment research during the reporting period.

What were the top investments of this financial product?

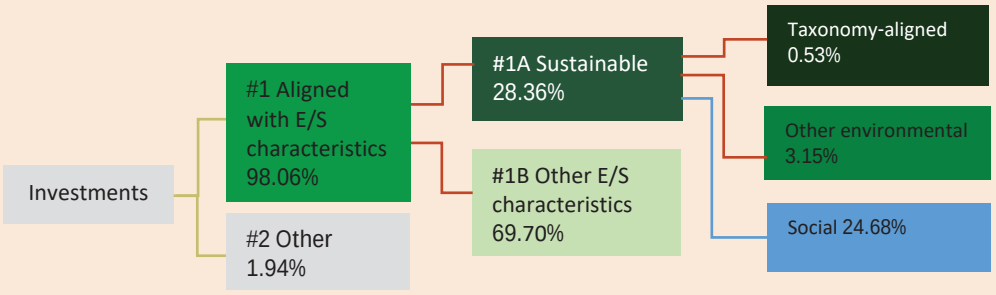
The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13/11/2025 to 31/03/2026.

Issuer name	Sector	Average weight	Country
Welltower Inc.	Real Estate	7.56%	United States
Prologis, Inc.	Real Estate	6.31%	United States
Equinix, Inc.	Real Estate	4.93%	United States
Swiss Prime Site AG	Real Estate	4.00%	Switzerland
TAG Immobilien AG	Real Estate	3.26%	Germany
Irish Residential Properties REIT plc	Real Estate	2.20%	Ireland
Digital Realty Trust, Inc.	Real Estate	2.19%	United States
Simon Property Group, Inc.	Real Estate	2.16%	United States
Goodman Group	Real Estate	2.08%	Australia
Unibail-Rodamco-Westfield SE	Real Estate	2.08%	France
Gaming and Leisure Properties, Inc.	Real Estate	2.07%	United States
Public Storage	Real Estate	1.91%	United States
Ventas, Inc.	Real Estate	1.87%	United States
Pandox AB	Real Estate	1.80%	Sweden
Tritax Big Box REIT plc	Real Estate	1.76%	United Kingdom

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Note: Due to rounding, reported figures may not sum to 100%.

In which economic sectors were the investments made?

Sector	% of Net Assets*
Health Care	0.25%
Health Care Providers & Services	0.25%
Information Technology	0.30%
It Services	0.30%
Real Estate	100.94%
Diversified Reits	8.75%
Health Care Reits	17.26%
Hotel & Resort Reits	1.96%
Industrial Reits	14.60%
Office Reits	-0.80%
Real Estate Management & Development	14.30%
Residential Reits	10.95%
Retail Reits	16.04%
Specialized Reits	17.87%

*Due to rounding, the percentages for subsectors may not total to the sector percentage. Cash holdings are not shown as a % of net assets in the table above.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Portfolio does not commit to holding a minimum proportion in sustainable investments with an environmental objective aligned with the EU Taxonomy Regulation. It does, however, have discretion to invest in these types of investments as part of delivering its investment objective

0.53% of the investments made by the Portfolio were in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. This taxonomy alignment figure is based on data provided by a third-party which may be subject to limitations in respect of its accuracy and/or completeness. Third-party data providers may use actual data reported by companies on taxonomy alignment or estimated data when calculating taxonomy alignment. The methodology upon which any estimates are based are proprietary to the third-party data provider. The mentioned percentage figures have not been subject to an assurance review by an auditor or a third party.

An economic activity qualifies as environmentally sustainable under the EU Taxonomy Regulation where it substantially contributes to one of six environmental objectives.

Climate change mitigation	This figure will be presented when data quality improves
Climate change adaptation	This figure will be presented when data quality improves
Sustainable use and protection of water and marine resources	This figure will be presented when data quality improves

Transition to a circular economy	This figure will be presented when data quality improves
Pollution prevention and control	This figure will be presented when data quality improves
Protection and restoration of biodiversity and ecosystems	This figure will be presented when data quality improves

The mentioned percentage figures have been subject to an assurance review by a third party auditor.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[1]?

☐ Yes:

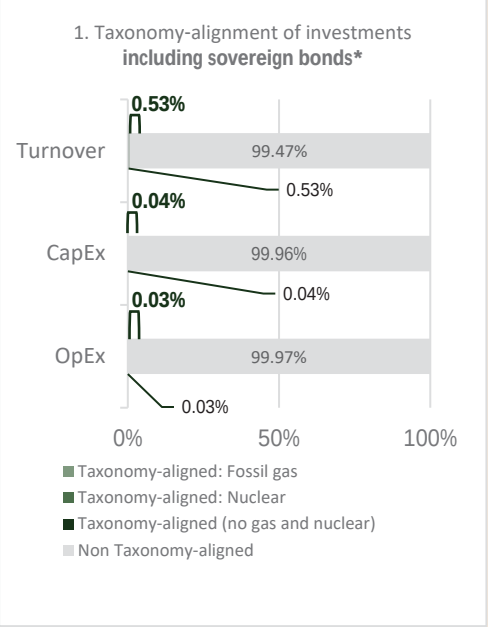
☐ In fossil gas ☐ In nuclear energy

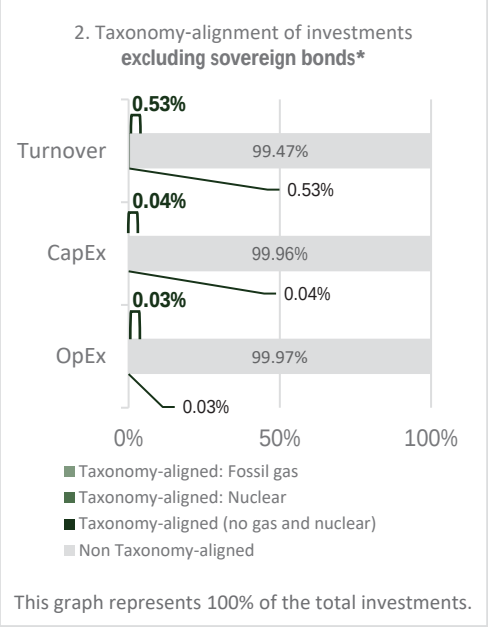
☒ No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1]Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- *What was the share of investments made in transitional and enabling activities?*

  0.00% of the investments held by the Portfolio were in transitional activities as defined by the EU Taxonomy Regulation.

  0.00% of the investments held by the Portfolio were in enabling activities as defined by the EU Taxonomy Regulation.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?*

  This is the first reporting period for the Portfolio. A comparison of the percentage of investments that were aligned with the EU Taxonomy will be made in the next periodic report.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

3.15% of the sustainable investments had an environmental objective not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

24.68% of the sustainable investments had a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as "other" may include: (i) ancillary liquid assets (i.e. bank deposit at sight) held for liquidity management purposes; (ii) bank deposits, money market instruments or money market funds, held for treasury purposes; (iii) derivatives for hedging purposes; (iv) issuers with an ESG Materiality rating of 4 or 5 or issuers not covered by the ESGM Model, that did not qualify as sustainable investments.

These securities and instruments were not used to meet the environmental and/or social characteristics of the Portfolio. Their purpose is to provide a diversified fund that can achieve its financial objective, and to support liquidity, treasury and hedging exposures.

All equity investments were subject to the exclusion policy, ensuring minimum environmental and social safeguards are in place even for companies that do not have a strong ESG Materiality rating (4 or 5 rating) or that are not covered by the ESGM Model and therefore do not meet the criteria for the promotion of environmental or social characteristics. For ancillary liquid assets, bank deposits and derivatives, ESG considerations were integrated into the counterparty risk assessment

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period there were **10** environmental and/or social specific engagement activities with companies held in the Portfolio. These covered **9** companies across **6** countries and related to a range of themes.

Engagements are structured in line with the Investment Manager's engagement themes, which align with the PAIs. A breakdown of the engagements undertaken during the reporting period is provided below.

Engagements Theme	Alignment with PAIs	Proportion of Engagements
Climate Change	GHG Emissions and Energy Performance	**75.00%**
Environmental Stewardship	Biodiversity, Water and Waste	**8.33%**
Human Rights	Social and Employee Matters	**0.00%**
Labour Standards		**16.67%**

How did this financial product perform compared to the reference benchmark?

Not applicable. The Portfolio does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?`*

  Not applicable.

EU Taxonomy Regulation Disclosures (unaudited)

Regulation (EU) 2020/852 is a framework to facilitate sustainable investment which establishes criteria for determining whether an economic activity qualifies as environmentally sustainable across six environmental objectives (the "EU Taxonomy Regulation"). The EU Taxonomy Regulation requires that certain disclosure be made in this Report.

Article 6 Financial Products

The investments underlying the financial products listed below do not take into account the EU criteria for environmentally sustainable economic activities under the EU Taxonomy Regulation. The Article 6 Financial Products include:

- CT (Lux) American Extended Alpha
- CT (Lux) Asian Equity Income
- CT (Lux) Credit Opportunities
- CT (Lux) Emerging Market Debt
- CT (Lux) Enhanced Commodities
- CT (Lux) European Strategic Bond
- CT (Lux) Flexible Asian Bond
- CT (Lux) Global Dynamic Real Return
- CT (Lux) Global Emerging Market Short-Term Bonds
- CT (Lux) Global Extended Alpha
- CT (Lux) Global Investment Grade Credit Opportunities
- CT (Lux) Global Multi Asset Income
- CT (Lux) Global Technology
- CT (Lux) Pan European Absolute Alpha
- CT (Lux) UK Equity Income
- CT (Lux) US High Yield Bond

Article 8 and Article 9 Financial Products

The EU Taxonomy Regulation disclosures for the Article 8 and Article 9 Financial Products are included the Sustainable Finance Disclosure Regulation (SFDR) Periodic Disclosures that are included in this Report.
