Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk — **Typically higher rewards, higher risk**

1	2	3	4	**5**	6	7

- The lowest category does not mean 'no risk'.
- The Fund is in this category due to the nature of its investments and previous levels of volatility (how much the value of the Fund rises and falls).

- **Currency (FX) Risk** - The Fund can be exposed to different currencies and movements in foreign exchange rates can cause the value of investments to fall as well as rise.
- **Pricing risk** - Price movements in financial assets mean the value of assets can fall as well as rise, with this risk typically amplified in more volatile market conditions.
- **Derivative risk** - the Fund may use derivatives to reduce costs and/or the overall risk of the Fund (this is also known as Efficient Portfolio Management or "EPM"). Derivatives involve a level of risk, however, for EPM they should not increase the overall riskiness of the Fund.
- **Counterparty Default Risk** - The risk of losses due to the default of a counterparty on a derivatives contract or a custodian that is safeguarding the Fund's assets.
- For a more detailed explanation of risk factors, please refer to the "**Risk Factors**" section of the Prospectus.
