Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards,
lower risk

Typically higher rewards,
higher risk

- The Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.
- The price of the Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.
- Where the Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. This is usually a greater risk for bonds that produce a higher level of income. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value.
- Where the Fund invests into other investment funds, they may invest in different assets, countries or economic sectors and therefore have different risk profiles not in line with those of the Fund.
- Investment trusts and closed ended funds may borrow to purchase additional investments. This can increase returns when stock markets rise but will magnify losses when markets fall.
- The value of an investment trust or a closed-ended fund moves in line with stock market demand and its share price may be less than or more than the net value of the investments it holds.
- The Fund is entitled to use derivative instruments for EPM and investment purposes. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid. This could adversely impact the value of the Fund.
- The organisation from which the Fund buys a derivative may fail to carry out its obligations, which could also cause losses to the Fund.
- The Fund may invest in securities not denominated in sterling, the value of your investments may be affected by changes in currency exchange rates.
- For full details on risk factors for this Fund, please refer to the prospectus.
