## Risk and Reward Profile

### Why is this fund in this category?

The Fund has a high risk rating because it invests in equities, the value of which can move up and down over time to a greater extent than some other investments.

**In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by:**

**Concentration Risk** - the Fund invests in a relatively concentrated number of companies based on the healthcare sector. This focused strategy can produce high gains but can also lead to significant losses. The Fund may be less diversified than other investment funds.

**Investment Risk** - the Fund invests in company shares globally, and share prices can rise or fall due to a number of factors affecting global stock markets.

**Derivative Risk** - certain derivatives may result in gains or losses that are greater than the original amount invested. Derivatives also involve counterparty risk, which is the risk that

a counterparty to the derivative contract cannot meet its contractual obligations.

**Currency Risk** - the Fund invests in assets denominated in currencies other than the Fund's base currency. Changes in exchange rates may have a negative impact on the Fund's investments. If the share class currency is different from the currency of the country in which you reside, exchange rate fluctuations may affect your returns when converted into your local currency.

### What do these numbers mean?

The risk indicator was calculated using historical data and may not be a reliable indication of the future risk profile of the Fund. The risk category shown is not guaranteed and may change over time. A category 1 fund is not a risk-free investment - the risk of losing your money is small, but the chance of making gains is also limited. With a category 7 fund, the risk of losing your money is high but there is also a chance of making high gains. The numerical scale is complex, for example, 2 is not twice as risky as 1.
