Objectives and investment policy

Objective

The Fund objective is to provide regular income with the prospect of capital growth over the long term (at least five years).

Policy

At least 70% of the Fund is invested in collective investment schemes, with typically between 40% to 70% and at least 25% in funds managed or operated by Jupiter or an associate of Jupiter. Up to 30% of the Fund may be invested in other transferable securities, cash and near cash.

The Fund will have exposure (direct and/or indirect) of:

- i) at least 60% to fixed interest securities; and
- ii) up to 35% to shares of companies.

At least 50% of the Fund will (in aggregate) be invested directly or indirectly in

- i) shares issued by companies based in the UK and/or funds investing in such companies; and/or
- ii) transferable securities which are sterling denominated or hedged back to sterling.

The Fund may use derivatives (i.e. financial contracts whose value is linked to the expected price movements of an underlying investment), with the aim of generating returns (i.e. for investment purposes) and/or reducing the overall costs and risks of the Fund. The Investment Manager expects that derivative use will be primarily for reducing costs or risks.

Strategy

The team believes that with deep and thorough research they are able to identify active fund managers with the ability to generate strong risk-adjusted returns. The Fund will tend to invest in a focused portfolio of funds where the manager has the highest conviction.

Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards,
lower risk

Typically higher rewards,
higher risk

- The lowest category does not mean 'no risk'.
- The Fund is in this category due to the nature of its investments and previous levels of volatility (how much the value of the Fund rises and falls).
- **Currency (FX) Risk** - The Fund can be exposed to different currencies and movements in foreign exchange rates can cause the value of investments to fall as well as rise.
- **Interest Rate Risk** - The Fund can invest in assets whose value is sensitive to changes in interest rates (for example bonds) meaning that the value of these investments may fluctuate significantly with movement in interest rates.e.g. the value of a bond tends to decrease when interest rates rise
- **Pricing Risk** - Price movements in financial assets mean the value of assets can fall as well as rise, with this risk typically amplified in more volatile market conditions.
- **Credit Risk** - The issuer of a bond or a similar investment within the Fund may not pay income or repay capital to the Fund when due.
- **Derivative risk** - the Fund may use derivatives to reduce costs and/or the overall risk of the Fund (this is also known as Efficient Portfolio Management or "EPM"). Derivatives involve a level of risk, however, for EPM they should not increase the

overall riskiness of the Fund.

- **Counterparty Risk** - the risk of losses due to the default of a counterparty e.g. on a derivatives contract or a custodian that is safeguarding the Fund's assets.
- **Charges from capital** - Some or all of the Fund's charges are taken from capital. Should there not be sufficient capital growth in the Fund this may cause capital erosion.
- For a more detailed explanation of risk factors, please refer to the "Risk Factors" section of the Scheme Particulars.
