Hedging and derivative transactions are permitted in connection with the efficient portfolio management of the Fund and borrowing will be permitted in accordance with the Regulations. It is not intended that the use of derivatives in this way will increase the risk profile of the Fund.

Investors' attention is drawn to the detailed risk warnings in this Prospectus.

### Target Market

The Fund is suitable for an investor seeking to achieve capital growth over a minimum of 5 years. The Fund is unlikely to be compatible with the requirements of an investor:

- looking for a guaranteed return; or
- seeking full capital protection; or
- who does not have sufficient resources to bear any loss resulting from the investment; or

- with an investment horizon of less than 5 years.

## Risk and reward profile

The calculation of the risk and reward indicator is based on 5 years of historical (actual or simulated) information so may not be a reliable indication of the future risk profile of the Fund.

The risk category shown is not a target or a guarantee and may change over time. Investors are advised that the lowest category does not mean a risk free investment.

The risk indicator for this Fund reflects the following:

The value of investments in the Fund and the income from them may go down as well as up and you may not get back your original investment when you sell your shares.

During unusual market conditions, the risks normally experienced by the Fund may increase significantly, and in addition, the Fund may be subject to the following risks.

**Interest Rate Risk:** Fixed interest securities are affected by trends in interest rates and inflation. If interest rates go up the value of capital may fall and vice versa. Inflation will also decrease the real value of capital. The value of a fixed interest security is also affected by its credit rating.

**Concentration Risk:** The Fund holds a limited number of investments. If one of these investments falls in value this can have a greater impact on the Funds' value than if it held a larger number of investments.

**Derivative risk:** The Fund may invest in derivatives. A relatively small movement in the derivative's underlying investment may have a much larger impact, positive or negative, on the value of the fund than if the fund were to hold the underlying investment itself.

**Corporate and government bond risk:** Interest rates movements affect the value of bonds. Bonds with a longer maturity period are more sensitive to changes in interest rates. A third party which issues bonds may fail to meet the interest payments or repay its debt, leading to losses for the Fund. The risk is greater for investments that have a lower credit rating
