

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Neuberger Berman Short Duration Emerging Market Debt Fund (the "Fund")

a sub-fund of Neuberger Berman Investment Funds plc

GBP P Accumulating Class, IE00BGV7J266

This Fund is managed by Neuberger Berman Asset Management Ireland Limited.

OBJECTIVES AND INVESTMENT POLICY

The Fund aims to achieve a target average return of 3% over cash before fees over a market cycle (typically 3 years) by investing in a diversified selection of hard currency-denominated (defined as USD, EUR, GBP, JPY, CHF) short duration sovereign and corporate bonds (debt securities) issued in Emerging Market Countries. Short duration securities have a shorter maturity (the date on which a bond is repaid to the investor) and a lower duration (sensitivity to changes in interest rates).

There can be no guarantee that the Fund will ultimately achieve its investment objective and capital invested is at risk. The Fund is managed with a disciplined approach which begins with analysis of the market environment and the global economy. Within this framework, the Sub-Investment Managers' (or the Manager where applicable) approach involves forming a view on the economic outlook, identifying asset classes with attractive valuations and liquidity. Both investment grade and below investment grade securities may be invested in, within the limits stipulated in the Investment Restrictions section. This approach provides the basis for the Fund's asset allocation, country and currency weighting. Investment selection is the result of fundamental analysis in an effort to identify issuers that are believed to be undervalued and have strong credit quality. Whilst investments may be made in investment grade, high yield or unrated debt securities, the Fund intends to have a linear average credit rating of at least investment grade level.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more recognised rating agencies. High yield bonds have a lower credit rating because they carry a higher risk of not being paid back. High yield bonds typically offer a higher income to make them attractive to investors.

Under normal market conditions, the Sub-Investment Managers (or the Manager where

applicable) anticipate that the Fund's average interest duration will be within the range of +1.25 years and +2.75 years compared to the benchmark.

The Fund is actively managed, does not intend to track the Benchmark and is not constrained by it, the ICE BofA US 3-Month Treasury Bill Index (Total Return, USD) which is used for performance comparison purposes only. While the Fund may acquire securities which are components of the benchmark, it will not do so because of their inclusion in the benchmark.

The Fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR.

This Fund may not be appropriate for short-term investment and is more suitable as part of a diversified portfolio.

You may sell your shares on any day when the financial markets in London and New York are open for business.

As your shares are in British Pounds and the Fund is in US Dollars, currency exchange contracts are used to reduce the effect of changes in the currency exchange rate.

Your shares do not pay you income, but returns are reinvested to grow capital.

Transaction costs may reduce the Fund's return.

RISK AND REWARD PROFILE

The risk category for the Fund was calculated using historical data (including representative portfolio returns) and is based on how volatile the Fund's shares are likely to be. The risk category shown is not guaranteed to remain unchanged and may change over time.

A category 1 fund is not a risk free investment - the risk of losing money is smaller than that of a category 7 fund, but the likelihood of making gains is also lower. The seven category scale is complex: for example, a category 2 fund is not twice as risky as a category 1 fund.

This Fund is in category 3 due to its level of historical volatility. Historical volatility is calculated based on weekly returns over a 5 year period.

The main risks facing the Fund are:

- **Market Risk:** The risk of a change in the value of a position as a result of underlying market factors, including among other things, the overall performance of companies and the market perception of the global economy. In addition, as the Fund invests in businesses that are connected with less advanced countries and economies, certain risks exist. The market for investments in such countries may be less developed making it difficult for the Fund to sell its investments in such markets and political and social instability may lead to a reduction in the value of the investments in such countries. Accounting and auditing standards and availability of financial information may vary across the markets in which the Fund invests.
- **Liquidity Risk:** The risk that the Fund may be unable to sell an investment readily at its fair market value. This may affect the value of the Fund and in extreme market conditions its ability to meet redemption requests upon demand. To counter this risk the Fund actively monitors the liquidity of its investments. Furthermore, certain segments of global fixed income markets may experience periods of lower liquidity caused by market events or large sales and raise the risk that securities or other fixed-income instruments cannot be sold during those periods or sold at reduced prices. Those events may challenge the Fund to meet significant volumes of redemption requests and may also influence the value of the Fund as the lower liquidity may be reflected in a reduction in the value of the Funds' assets.
- **Counterparty Risk:** The risk that a counterparty will not fulfil its payment obligation for a trade, contract or other transaction, on the due date. The insolvency of any institution providing services such as the safekeeping of assets or acting as

counterparty in respect of derivatives or other instruments may expose the Fund to financial loss.

- **Credit Risk:** The risk that bond issuers may fail to meet their interest repayments, or repay debt, resulting in temporary or permanent losses to the Fund. This risk is greater than average for investments with a lower credit rating.
- **Interest Rate Risk:** The risk of interest rate movements affecting the value of fixed-rate bonds. Longer maturity bonds are more sensitive to changes in interest rates with the risk usually decreasing for bonds of lower rating and shorter duration.
- **Derivative Risk:** The Fund is permitted to use certain types of derivative instruments to seek to protect its assets against some of the risks outlined in this section. Their use will create leverage, an investment technique which gives an investor a larger exposure to an asset than the amount it invested. The Fund's use of leverage may result in greater variations (both positive and negative) in the value of your shares. However, leverage is limited to 100% of the Fund's assets and the Sub-Investment Managers (or the Manager where applicable) will ensure that the Fund's use of derivatives does not materially alter the overall risk profile of the Fund. Please refer to the Prospectus for a full list of the types of derivative that the Fund may utilise.
- **Operational Risk:** The risk of direct or indirect loss resulting from inadequate or failed processes, people and systems including those relating to the safekeeping of assets or from external events.
- **Currency Risk:** Investors who subscribe in a currency other than the base currency of the Fund are exposed to currency risk. Fluctuations in exchange rates may affect the return on investment. If the currency of this share class is different from your local currency, then you should be aware that due to exchange rate fluctuations the performance shown may increase or decrease if converted into your local currency.

For a more detailed explanation of risks, please refer to the "Investment Restrictions" and "Investment Risks" section of the Prospectus.

CHARGES

| One-off charges taken before or after you invest | |
|---|-------|
| Entry Charge | 5.00% |
| Exit Charge | None |
| This is the maximum that might be taken out of your money before it is invested or before the proceeds of your investment are paid out. | |
| Charges taken from the fund over a year | |
| Ongoing Charges | 0.55% |
| Charges taken from the fund under certain specific conditions | |
| Performance Fee | None |

These charges are used to pay the costs of running the Fund, including the costs of marketing and distributing it.

These charges reduce the potential growth of your investment.

The one-off charges shown are the maximum figures. In some cases they may be less. You can find out your actual charges from your financial adviser.

The ongoing charges figure is based on the expenses for the period ending 31 December 2025. This figure may vary from year to year.

You can find more details on these charges in the "Fees and Expenses" section of the Prospectus.

PAST PERFORMANCE

Past performance is not a reliable indicator of future results.

The past performance takes account of all charges and costs.

The value of this class is calculated in British Pounds.

The benchmark is provided in USD, as the base currency of the Fund, and may not represent a fair comparison to the share class currency.

The Fund launched on 31 October 2013.

This class started to issue shares on 13 August 2019.

The performance is compared against ICE BofA US 3-Month Treasury Bill Index (Total Return, USD).
